Week 88 / Packing and kissing circles / Grades K–5

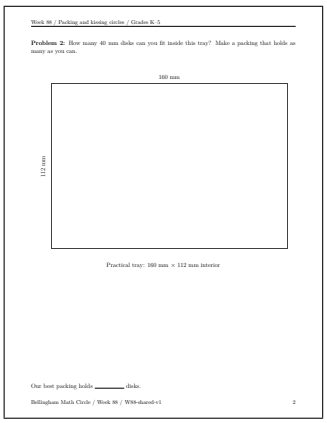

Disk sizes measure straight across the center. Keep disks flat. They may touch, but must not overlap. In a ring, every outside disk must touch the middle disk.

Problem 1: Use the 40 mm disks. How many can touch one middle disk at once? Make the biggest ring you can.

Most outside disks in our ring: _____

Week 88 / Packing and kissing circles / Grades K–5

Problem 2: How many 40 mm disks can you fit inside this tray? Make a packing that holds as many as you can.

160 mm

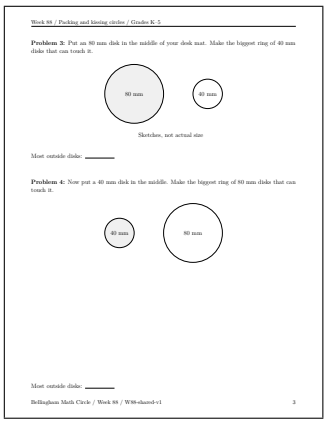

112 mm

Practical tray: 160 mm × 112 mm interior

Our best packing holds _____ disks.

Week 88 / Packing and kissing circles / Grades K–5

A radius runs from a circle's center to its edge. For two touching disks, the distance between centers is the sum of their radii.

Touching disks

Join the centers

Distance from A to B

40 mm

radii 15 mm and 25 mm

two radii end to end

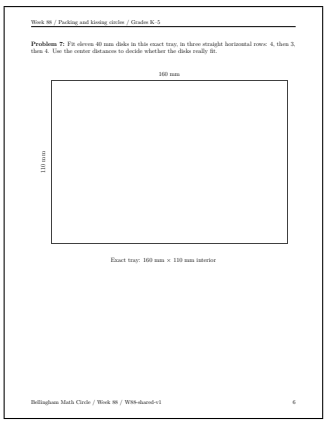

$15 + 25 = 40$ mm

Same pair each time. Sketches, not actual size.

Problem 6: What is the largest possible ring of 40 mm disks around a 40 mm disk? Explain why one more cannot fit. In every largest ring, must neighboring outside disks touch each other?
