Problem 4: Your partner takes A. Choose a deck that wins more card pairs against it and play six rounds. Do the same for B and C. Must your chosen deck win more rounds?

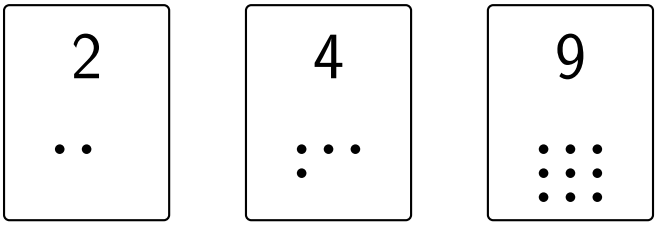

Problem 5: Try 3, 5, 7, and 9 in A's empty place. Which choices make A win more card pairs than B?

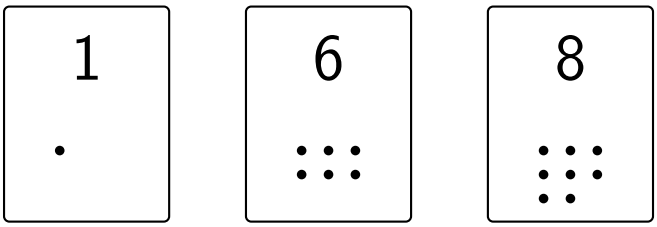

Problem 6: Swap one A card with one B card. Find every swap that makes B win more card pairs than A. Start each swap from these decks.

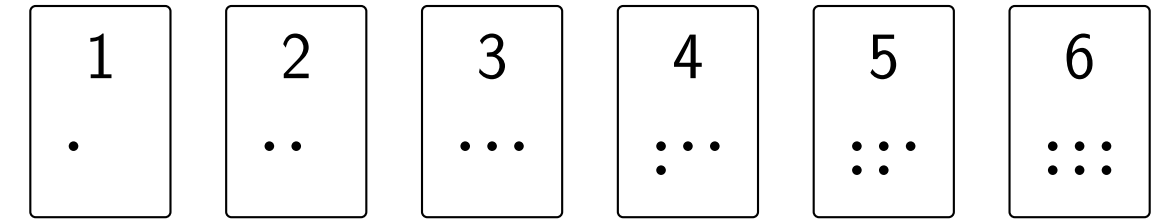

A

B

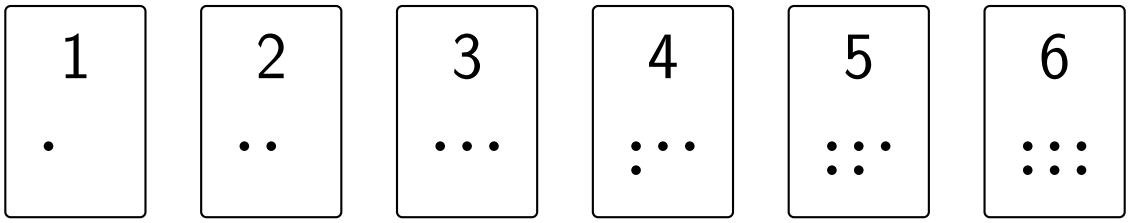

Problem 7: Put these six cards into two decks of three so both decks win the same number of pairs. Find a way, or show why it cannot be done.

A

B

Problem 8: Can these six cards make three two-card decks where A wins more pairs than B, B more than C, and C more than A? Show a way, or show why it cannot be done.

A

B

C
