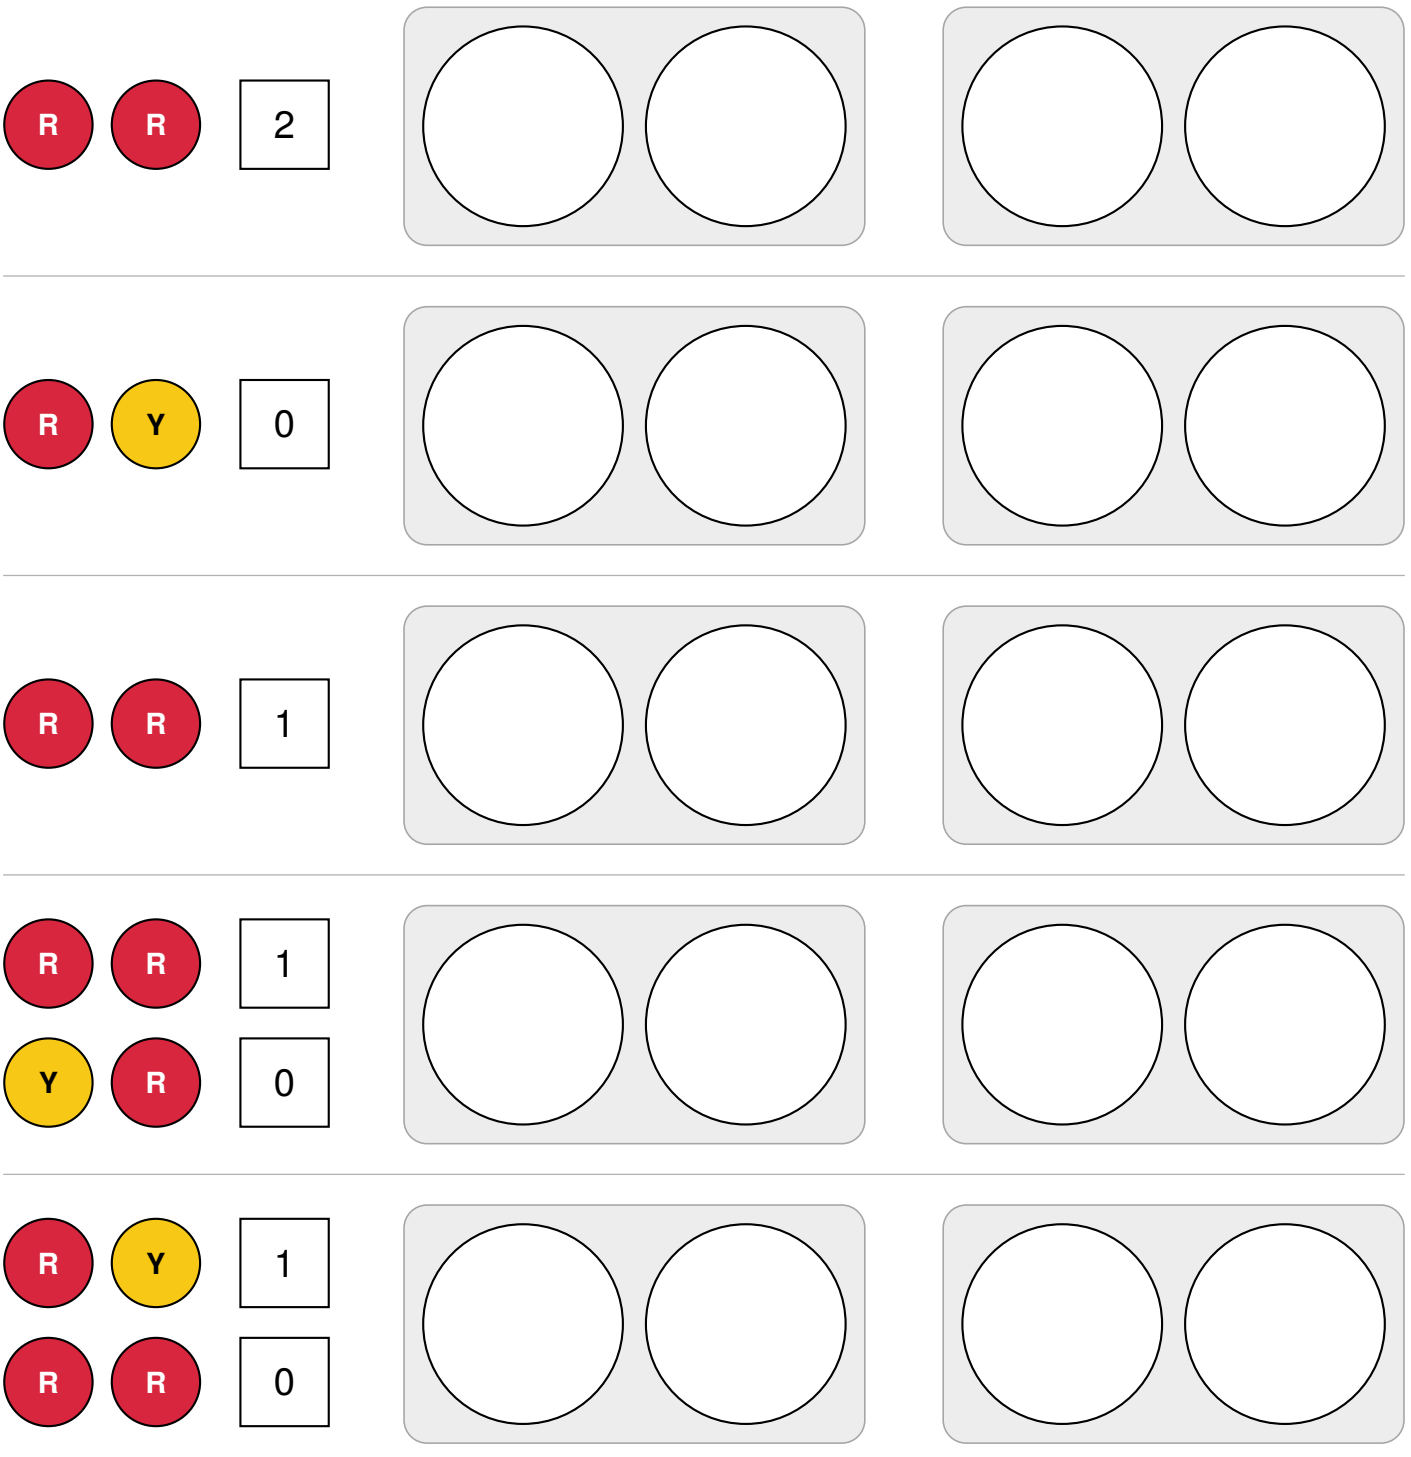
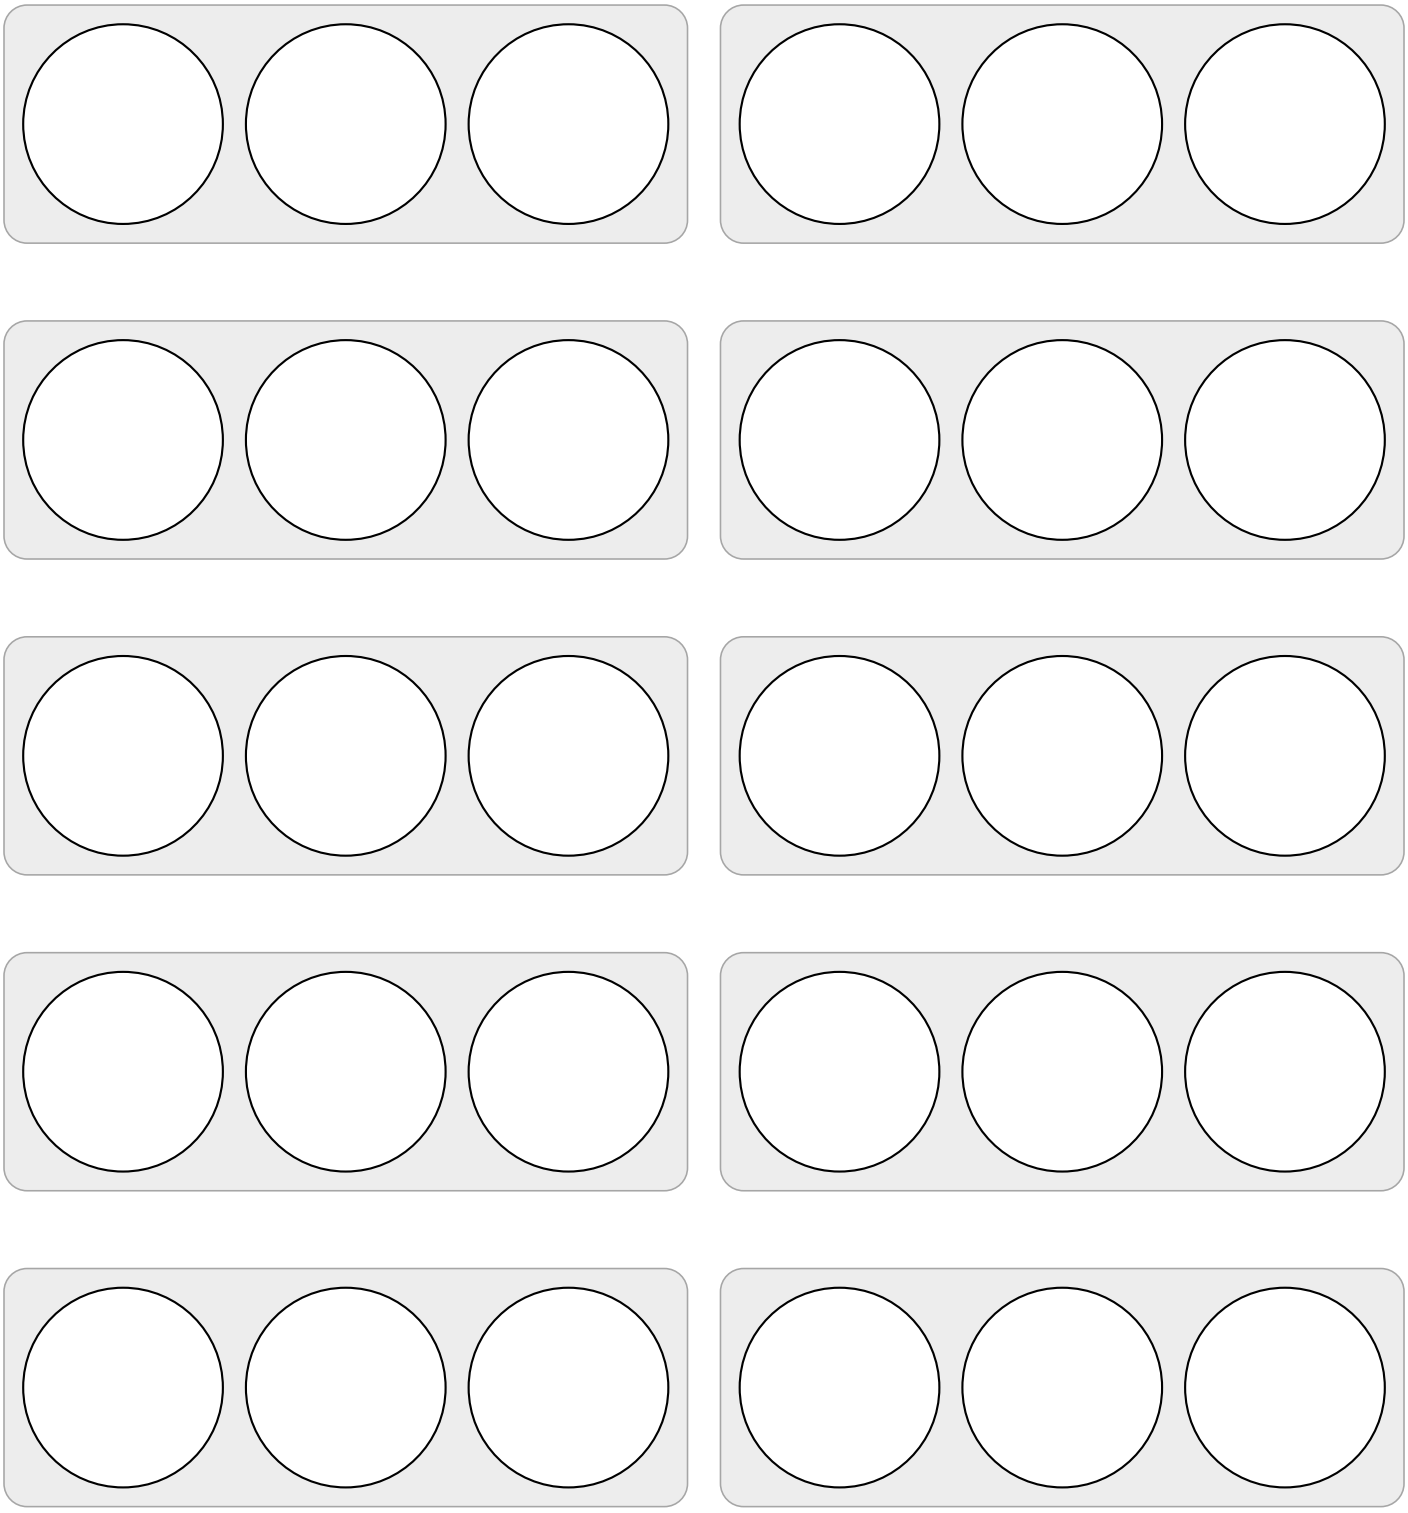
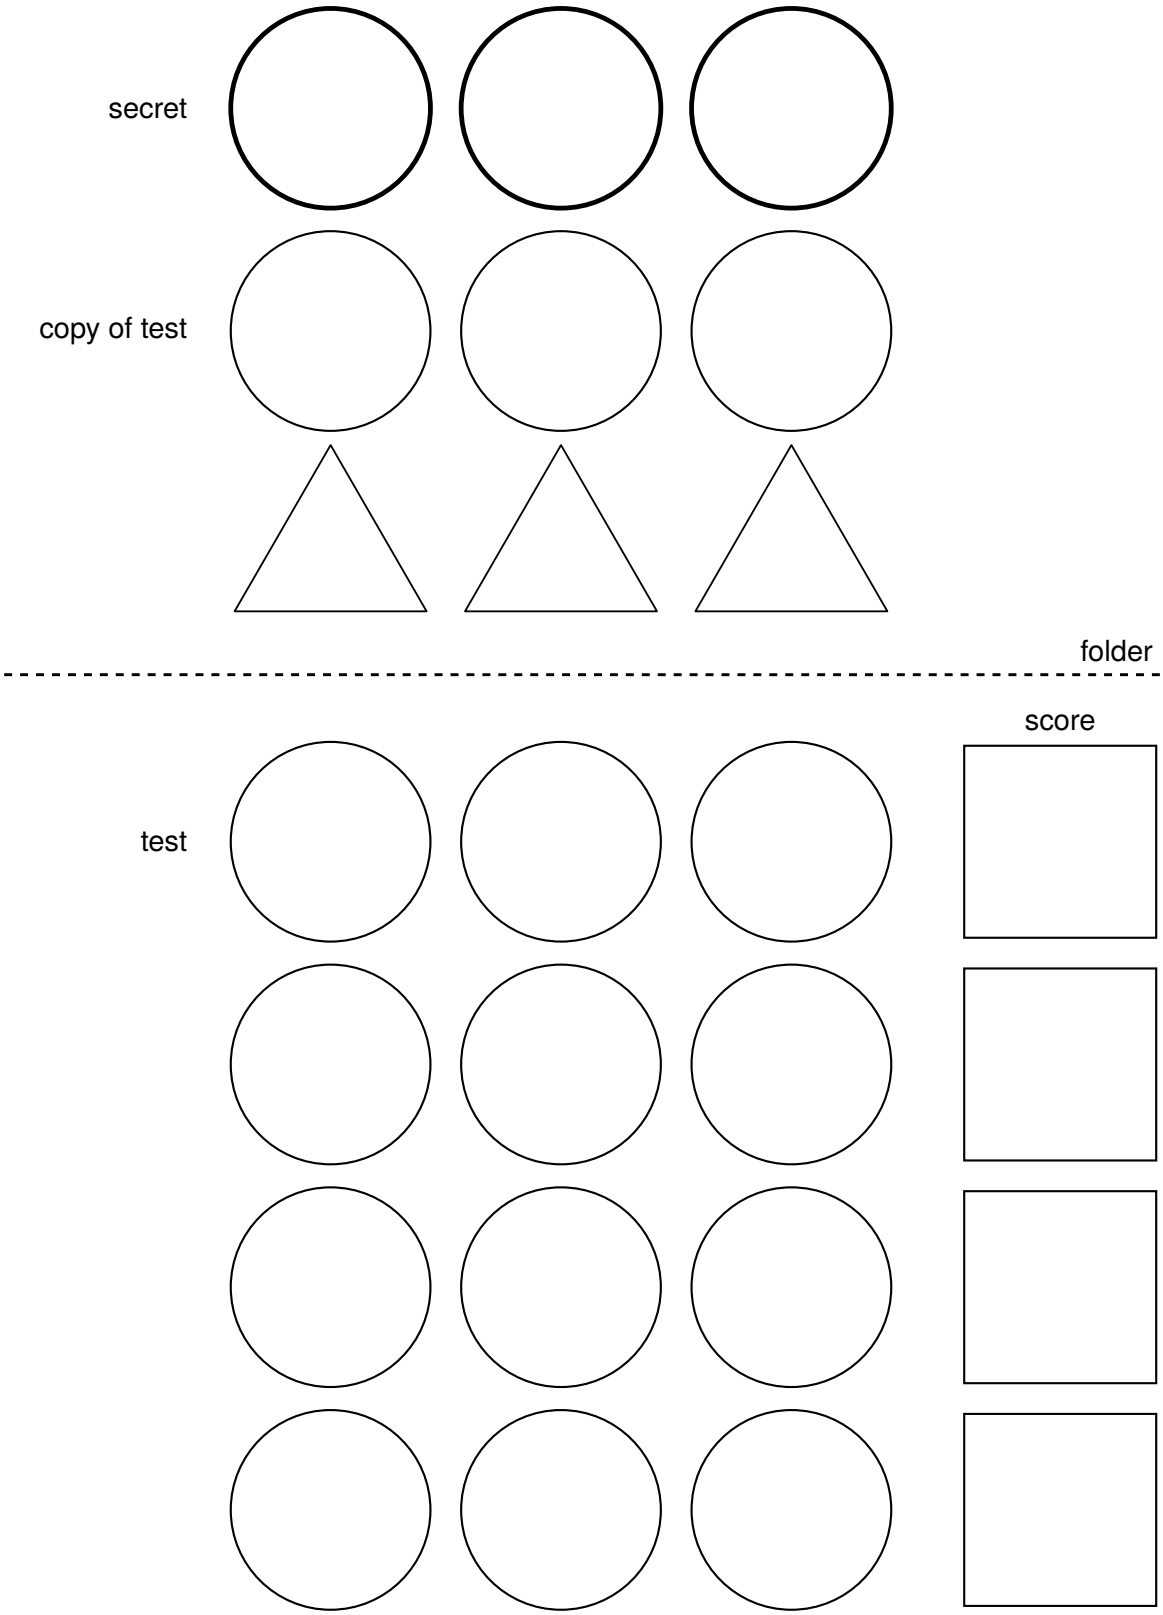
Problem 4: Now you pick one of the eight blocks in secret, and your partner may ask only two yes-or-no questions. Can your partner always be sure which block you picked?

Problem 7: For each row of tests and scores, which secrets could the grown-up be hiding? Put counters on every one.



Problem 8: Now a secret is three counters in a row. How many different secrets can you make?





Problem 9: The grown-up hides three counters. Play the same game. Can you always be sure of the secret after three tests?
