Start with one red and one blue. Draw, return it, add one counter of that color, and mix. For possible stories, choose the draws yourself.

Problem 1: Make every different bag you can reach after two draws. Which bags can come from two different color stories?

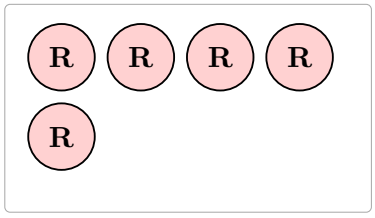

Problem 2: Which of these bags can you make after three draws? Make a story for each possible bag, and cross out any impossible bag.

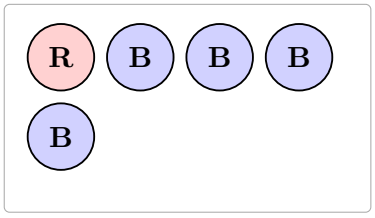

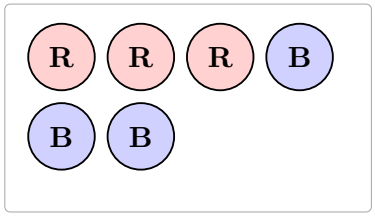

Problem 3: Find every four-draw story ending with this bag. Can you also make every four-draw bag with more blue than red?

Problem 4: Find every possible bag just before the last draw for each finish. Could copying ever lose all the blue counters?

after four draws

before the last draw
