Week 96 / Prime bags / Problem menu

for adults: pick, then print

Week 96 / Prime bags / Grades 2–3

A number card can split into two whole numbers greater than 1 that multiply to its value. These numbers are its factors. Keep splitting until every card is prime: a number greater than 1 with no factors except 1 and itself. The finished cards make a prime bag. Multiply its tokens to find its value.

20 → 4 · 5 → 2 2 5

card 4 × 5 = 20 2 × 2 × 5 = 20

Token order does not matter. Equal tokens are interchangeable.

Problem 1: For each card, find two different splitting routes. Can different routes finish with different prime bags?

Week 96 / Prime bags / Grades 2–3

Choose some tokens from a bag, using each token at most once. The chosen tokens form a bag. You may choose all of them or none. An empty bag has value 1. A divisor of a whole number divides it with no remainder.

2 2 5 → 2 2 5 → 2 5

value 20 choose shaded tokens 2 × 5 = 10 value 10 20 ÷ 10 = 2

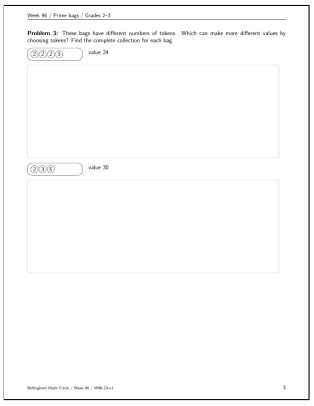

Problem 2: For each bag, find every different value you can make by choosing tokens. Does your collection contain every divisor of the full bag's value?

2 2 3 value 12

2 3 5 value 18
