Keep O fixed. Move tracer T; pencil P draws the copy. Stop if the bars get stuck. Place the named insert on the matching mat corners, with a fresh clear overlay over the drawing zones.

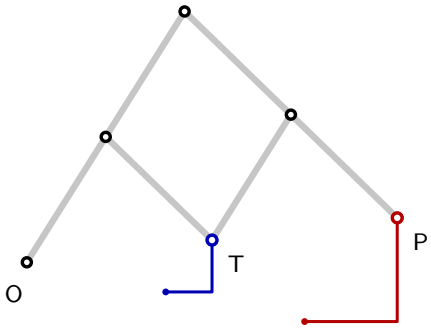

Start

Move T

Copy

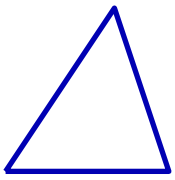

Problem 1: Use inserts A, B and C. Trace each path with T. What changes in the copies, and what stays the same?

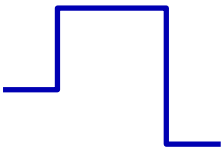

A

B

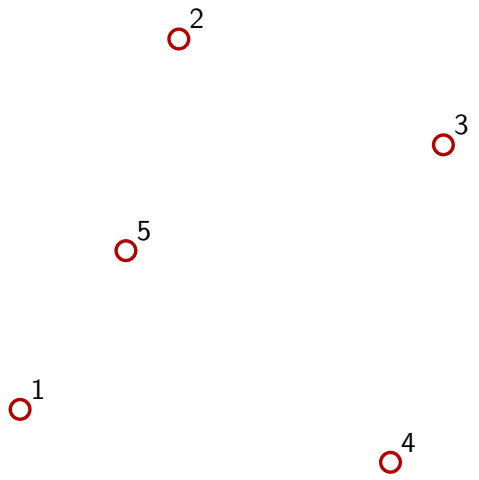

C

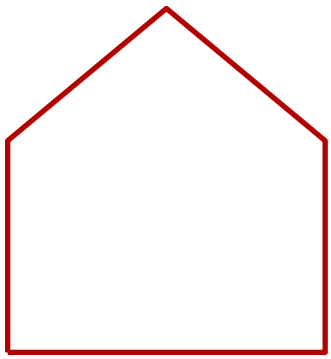

Problem 2: On target D, make P visit every dot by moving only T. On target E, make P follow the outline. Leave T's paths on your overlays.

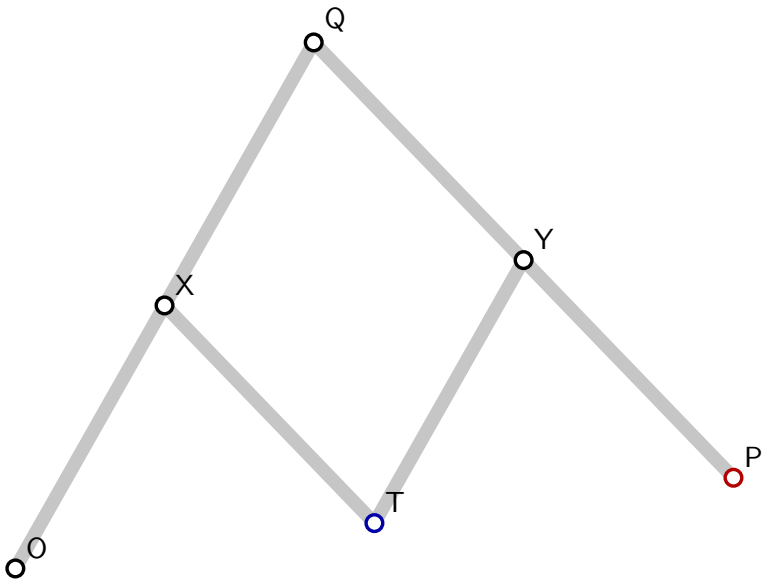

D

E

Problem 3: Can you position the machine so that O, T and P do not lie on one straight line? Find a rule for their distances that survives every position you try.

Problem 4: Make different paths for T whose copies stay inside the small solid box on insert F. Find a rectangle T can trace whose copy follows that box's outline.
