Start with one red and one blue. Draw, return it, add one counter of that color, and mix. For random play, each counter has the same chance; for possible stories, choose the draws yourself.

Problem 3: Find every four-draw story ending with this bag. Can you also make every four-draw bag with more blue than red?

Problem 4: Find every possible bag just before the last draw for each finish. Could copying ever lose all the blue counters?

after four draws

before the last draw
