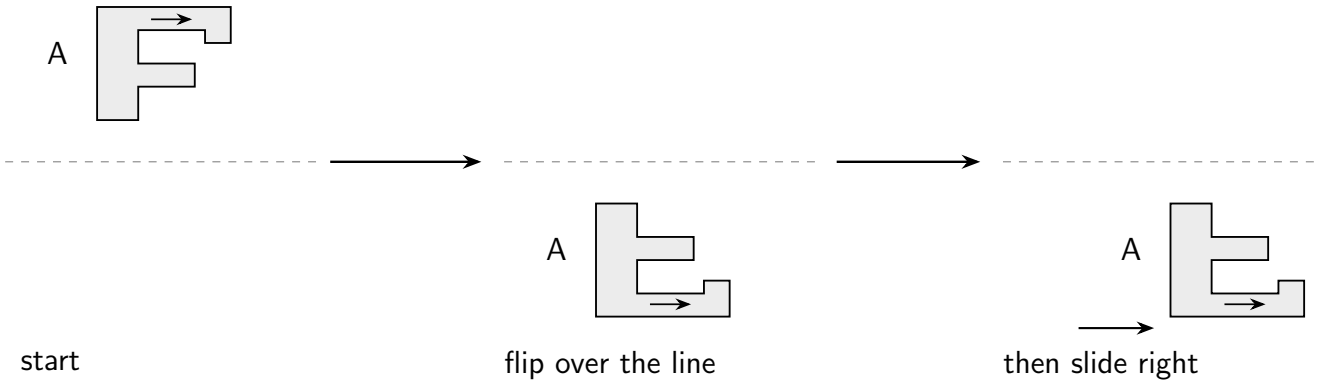
Use the loose footprints. Build each border in its box, or on a long strip if it needs more room. A match must fit every footprint. Test with a tracing copy; leave the original in place.

Problem 1: Make one repeating border. Find slides that make its tracing copy match and slides that do not.

Problem 2: Make two repeating borders whose shortest matching slides are different lengths.



Problem 3: Make a border that matches after a flip over the middle line and a slide along it. Can you make the flip alone fail?

Problem 4: Make another border like Problem 3's, where the shortest slide is longer.
