

Play each game with a partner and a pile of counters. Take turns taking counters from the pile. Whoever takes the last counter wins.

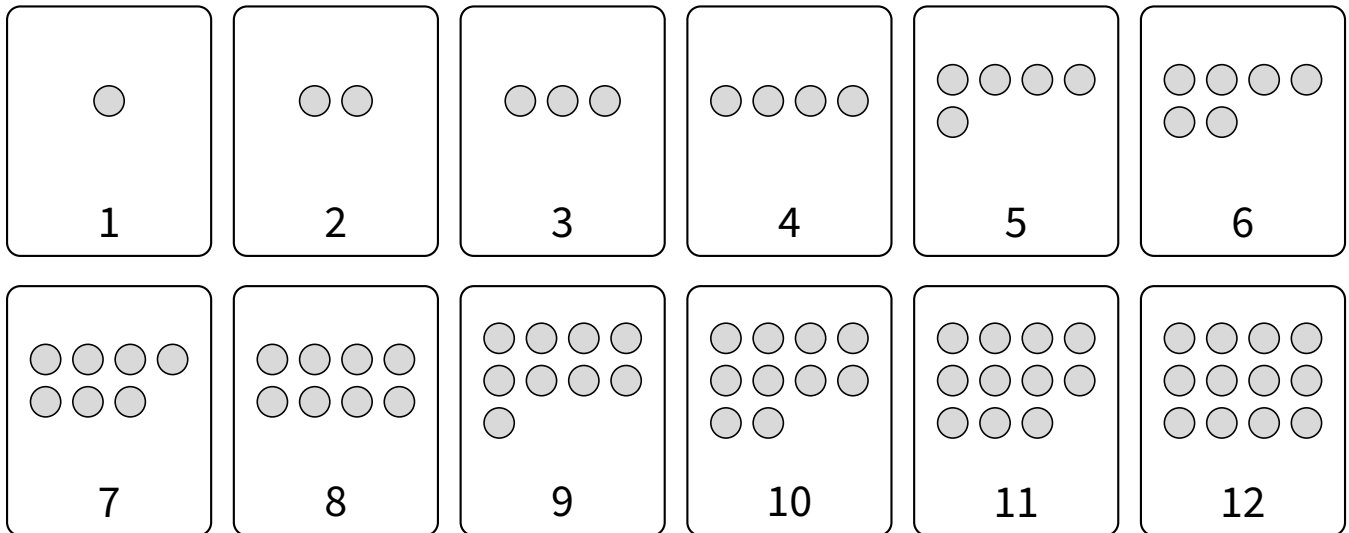

Problem 1: Take 1 or 2 counters on each turn. For each pile, circle whether you want to go 1st or 2nd.

			
3	4	5	6
1st 2nd	1st 2nd	1st 2nd	1st 2nd

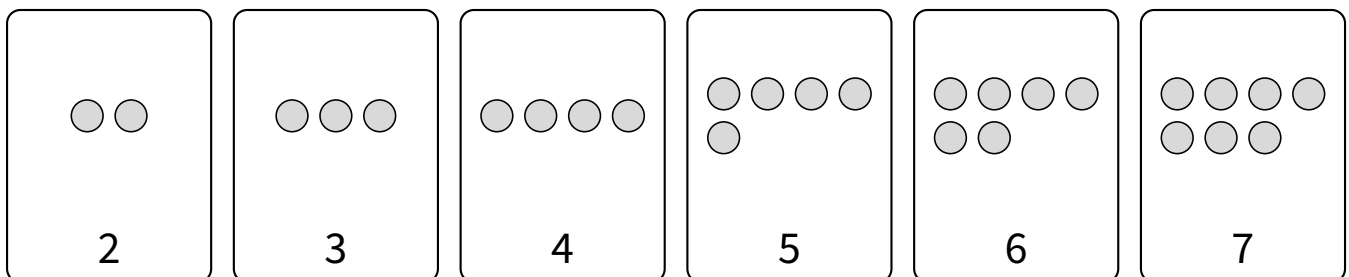

Problem 2: It is your turn, and you may take 1 or 2 counters. Cross out the counters you would take to be sure to win.

			
4	5	7	8

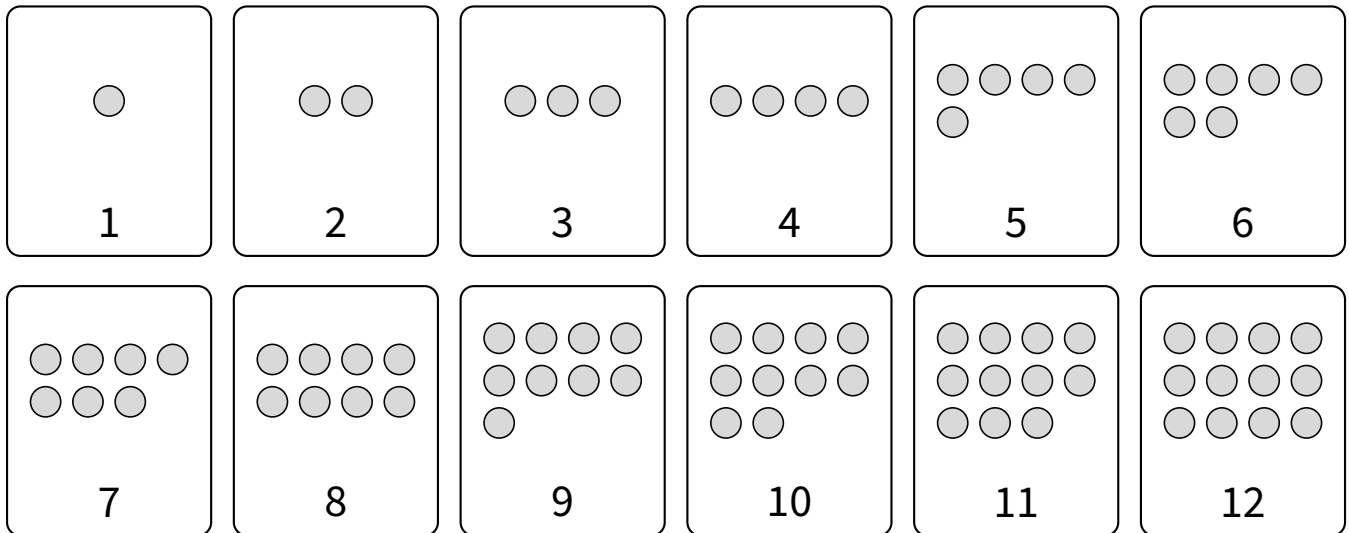

Problem 3: Take 1 or 2 counters on each turn. Shade every pile where you would rather go second.

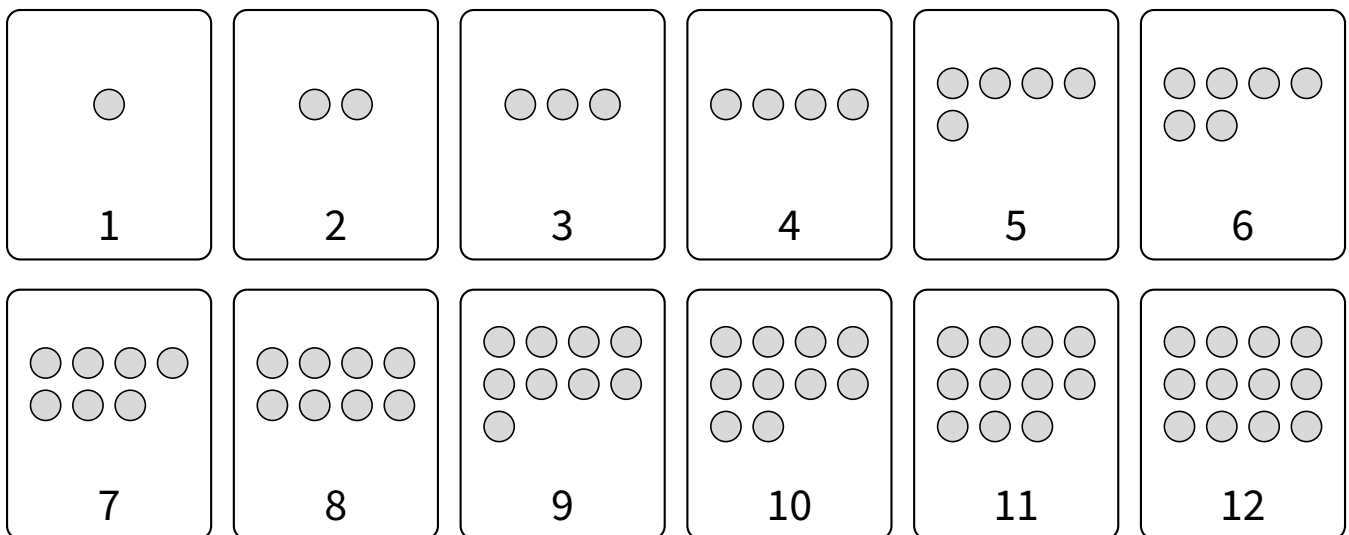

Problem 4: Your partner plays Ben, who goes first and always takes 2 counters when he can. Circle each pile where you can beat Ben by taking 1 or 2.

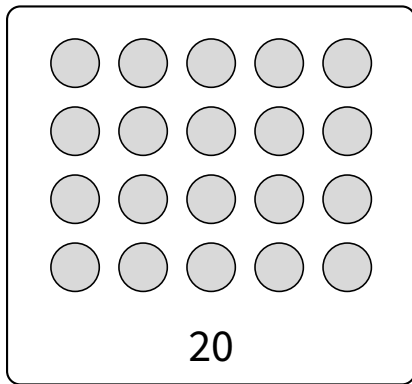

Problem 5: Now take 1, 2, or 3 counters on each turn. Shade every pile where you would rather go second.

Problem 6: Take 1 or 3 counters on each turn. Shade every pile where you would rather go second.

Problem 7: Start with a pile of 20 counters. For each rule, circle whether you want to go 1st or 2nd.

Take 1 or 2.

1st

2nd

Take 1, 2, or 3.

1st

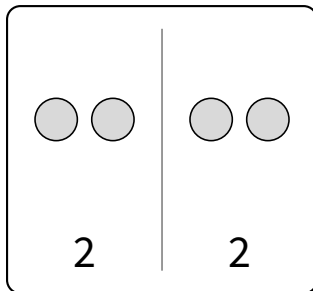

2nd

Take 1 or 3.

1st

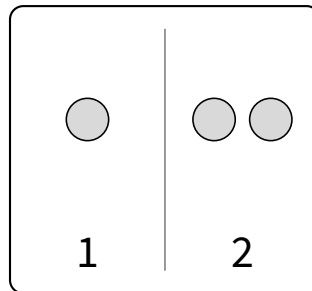

2nd

Problem 8: Take 1 or 2 counters from one pile on each turn, and whoever takes the very last counter wins. Circle 1st or 2nd for each pair of piles.

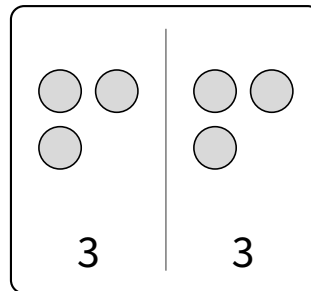

1st

2nd

Problem 9: Take 1 or 2 counters on each turn. Ring the counters taken on each turn to show every different game with 4 counters.

Problem 10: Take 1 or 2 counters on each turn. Ring the counters taken on each turn to show every different game with 5 counters. Put a star next to each game the first player wins.
