

Play each game with a partner and a pile of counters. Take turns taking counters from the pile. Whoever takes the last counter wins.

Problem 1: Take 1 or 2 counters on each turn. For each pile, circle whether you want to go 1st or 2nd.

			
2	3	4	5
1st 2nd	1st 2nd	1st 2nd	1st 2nd

Problem 2: It is your turn, and you may take 1 or 2 counters. Cross out the counters you would take to be sure to win.

			
4	5	7	8

Problem 3: Take 1 or 2 counters on each turn. Circle every pile where you would rather go second.

Problem 4: Ben always takes 2 counters when he can, and you take 1 or 2. Circle each pile where you can beat Ben when he goes first.

Problem 5: Now take 1, 2, or 3 counters on each turn. Circle every pile where you would rather go second.

Problem 6: Take 1 or 3 counters on each turn. Circle every pile where you would rather go second.

Problem 7: Start with a pile of 20 counters. For each rule, circle whether you want to go 1st or 2nd.

Take 1 or 2.

1st

2nd

Take 1, 2, or 3.

1st

2nd

Take 1 or 3.

1st

2nd

Problem 8: Take 1 or 2 counters from one of the two piles on each turn. Whoever takes the very last counter wins. For each pair of piles, circle whether you want to go 1st or 2nd.

1st

Problem 9: A game starts with 4 counters, and each turn takes 1 or 2. Draw rings around the counters taken on each turn to show every different way the game can go.

Problem 10: Now find every different way a game with 5 counters can go, taking 1 or 2 on each turn.
