

Problem 1: Put a checker on each gray square of strip A. A jump: a checker hops over the checker right next to it into the empty square just after it, and the checker it hopped over comes off. Make one jump. Draw an X in the square where the checker lands. Then set up strip B and make a jump that goes to the left. Draw an X where it lands.

Strip A

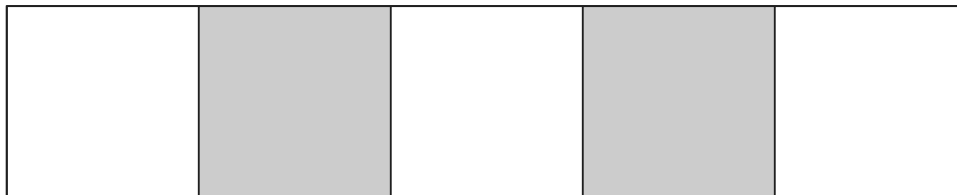

Strip B

Problem 2: On strips C, D and E, put a checker on each gray square. Try to make a jump. Circle YES if a jump is possible and NO if no jump is possible.

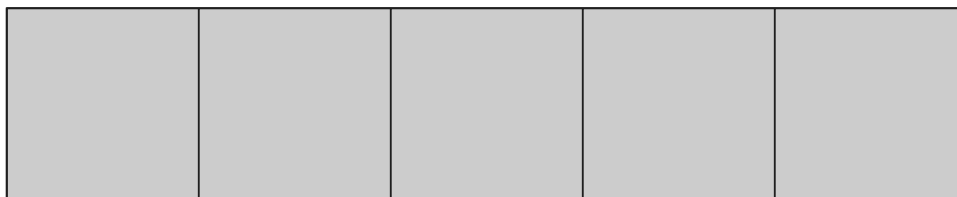

Strip C

YES NO

Strip D

YES NO

Strip E

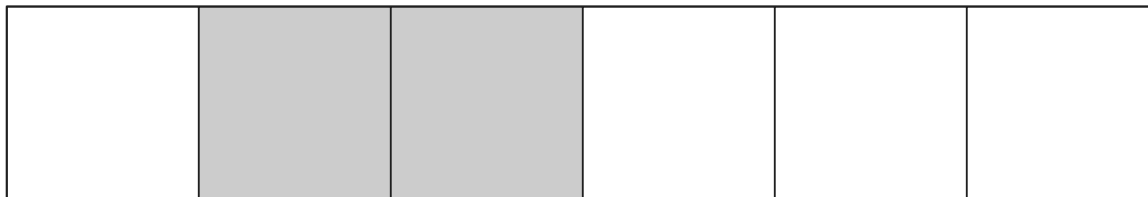

YES NO

Problem 3: On each of strips F to K, put a checker on each gray square. Jump until no jump is possible. Count the checkers left on the strip and write the number in the box.

Strip F

left:

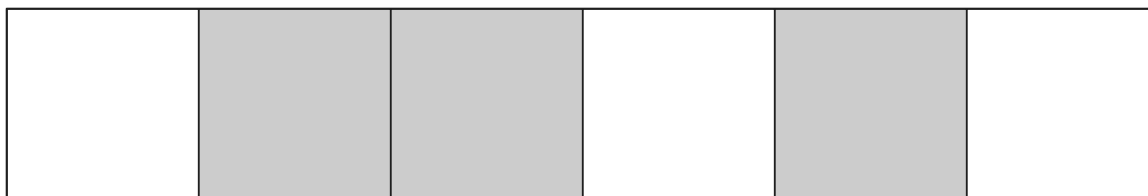

Strip G

left:

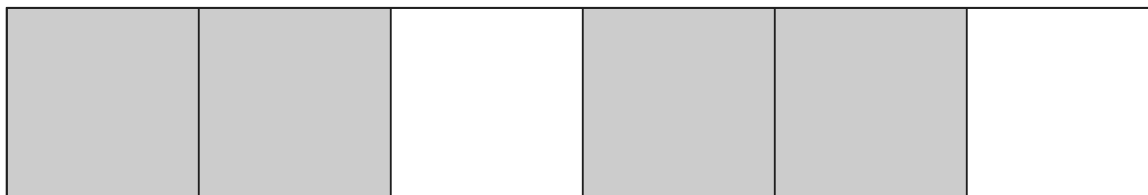

Strip H

left:

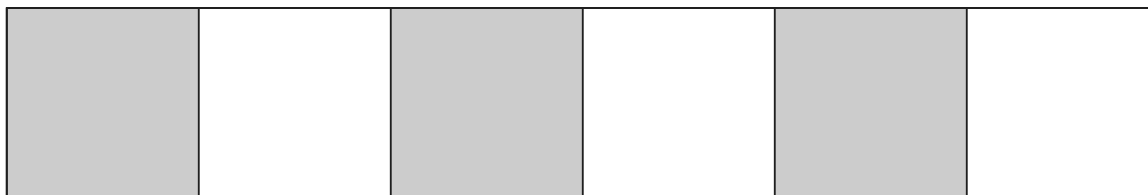

Strip I

left:

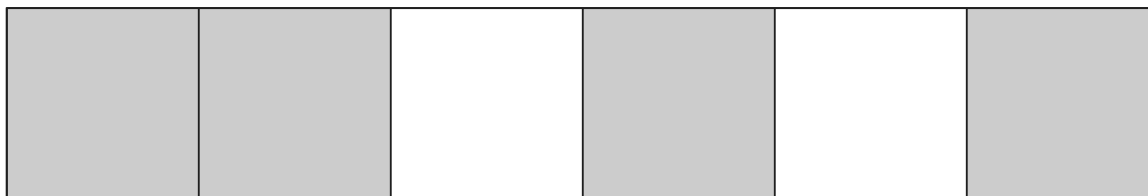

Strip J

left:

Strip K

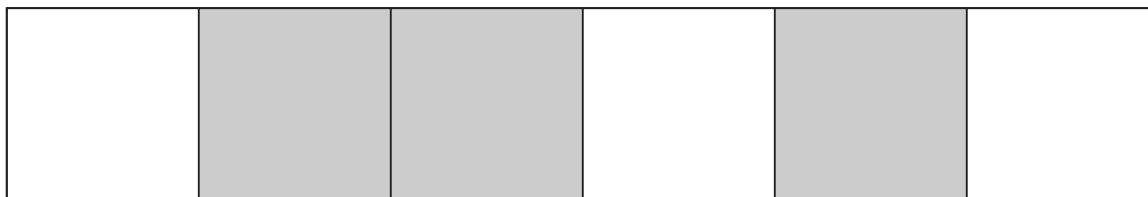

left:

Problem 4: Set up strips H and K again. This time jump in a different order. Write the number of checkers left after this try in the first box, and the smallest number you managed after more tries in the second box.

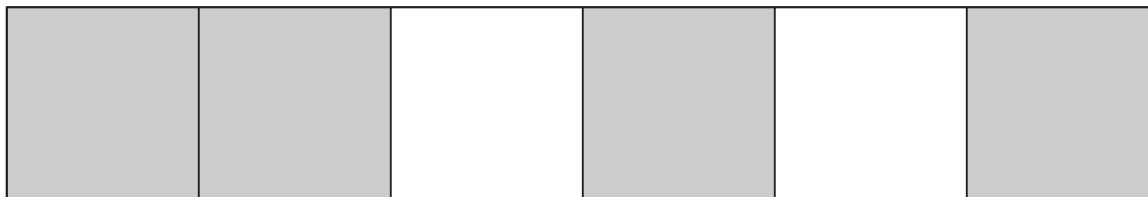

Strip H

--	--

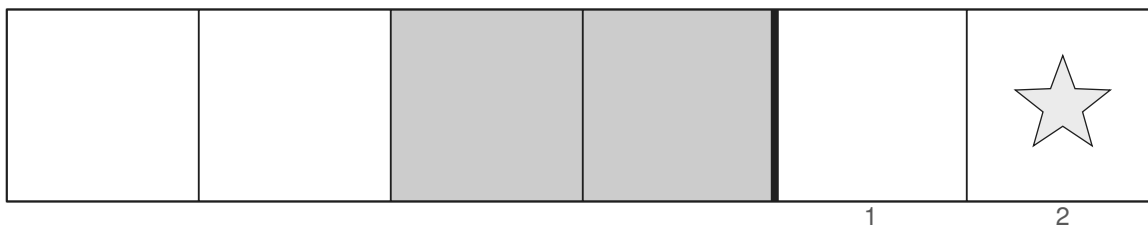

Strip K

--	--

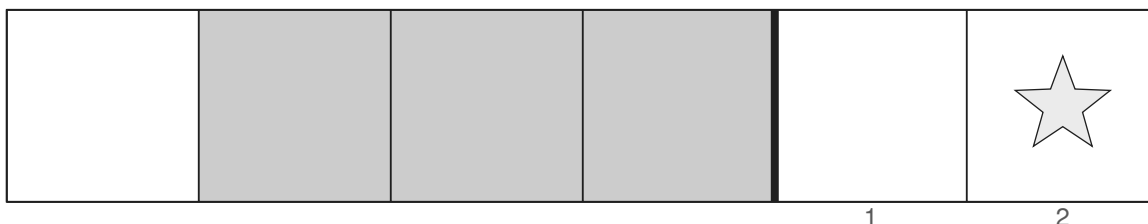

Problem 5: The thick line on strip L is a river. The four squares to the left of it are the home side. Put checkers on the two gray squares. Cross the river with one jump. Draw an X where the checker lands. On strips M and N, put checkers on the gray squares, jump as many times as you like, and try to get a checker onto the square with the star. Draw an X on the farthest square across the river that any checker reached.

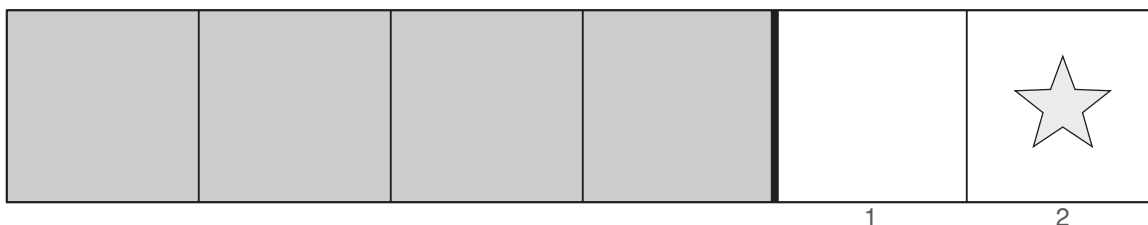

Strip L

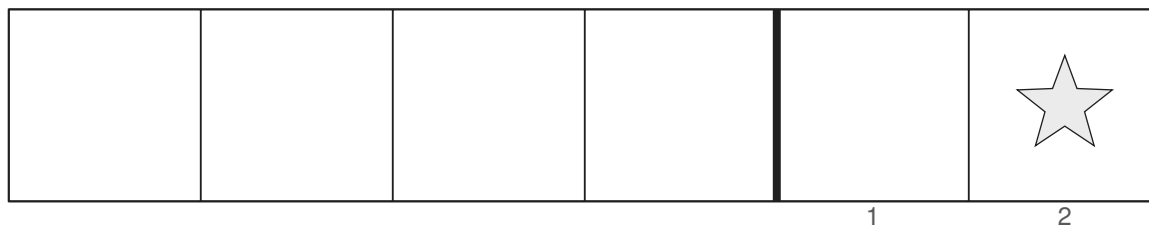

Strip M

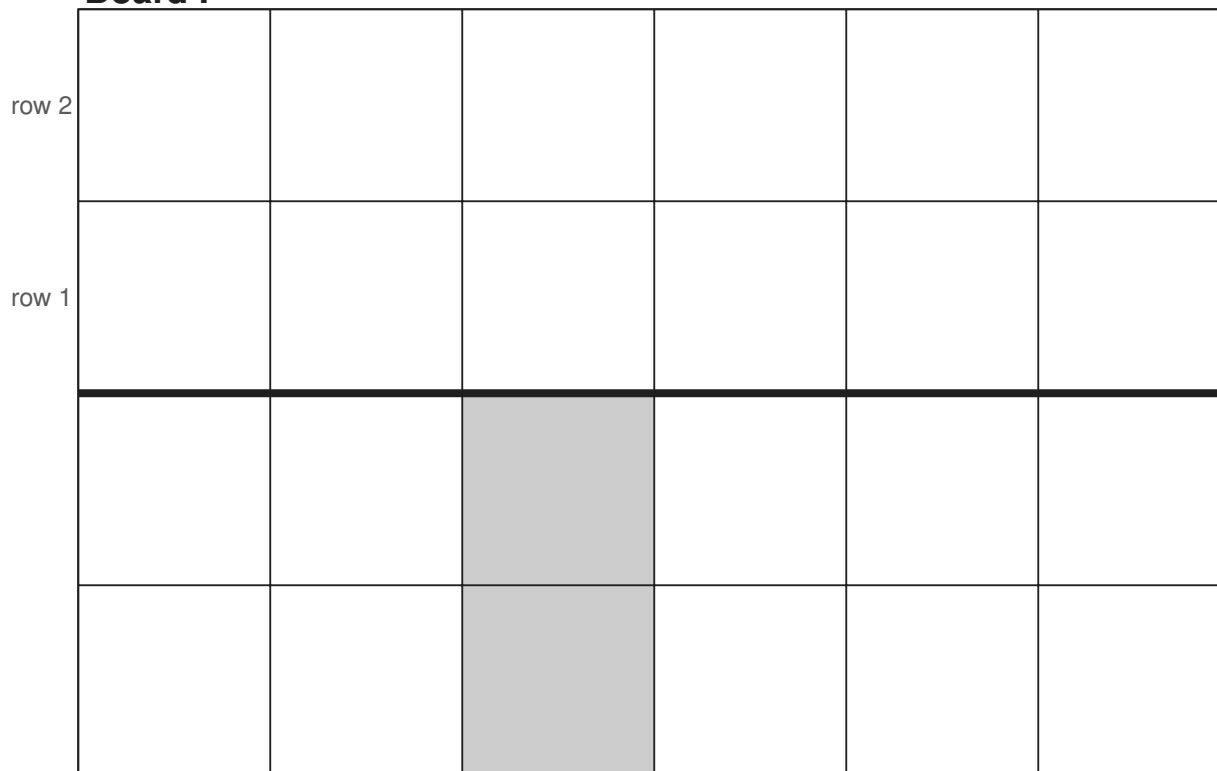

Strip N

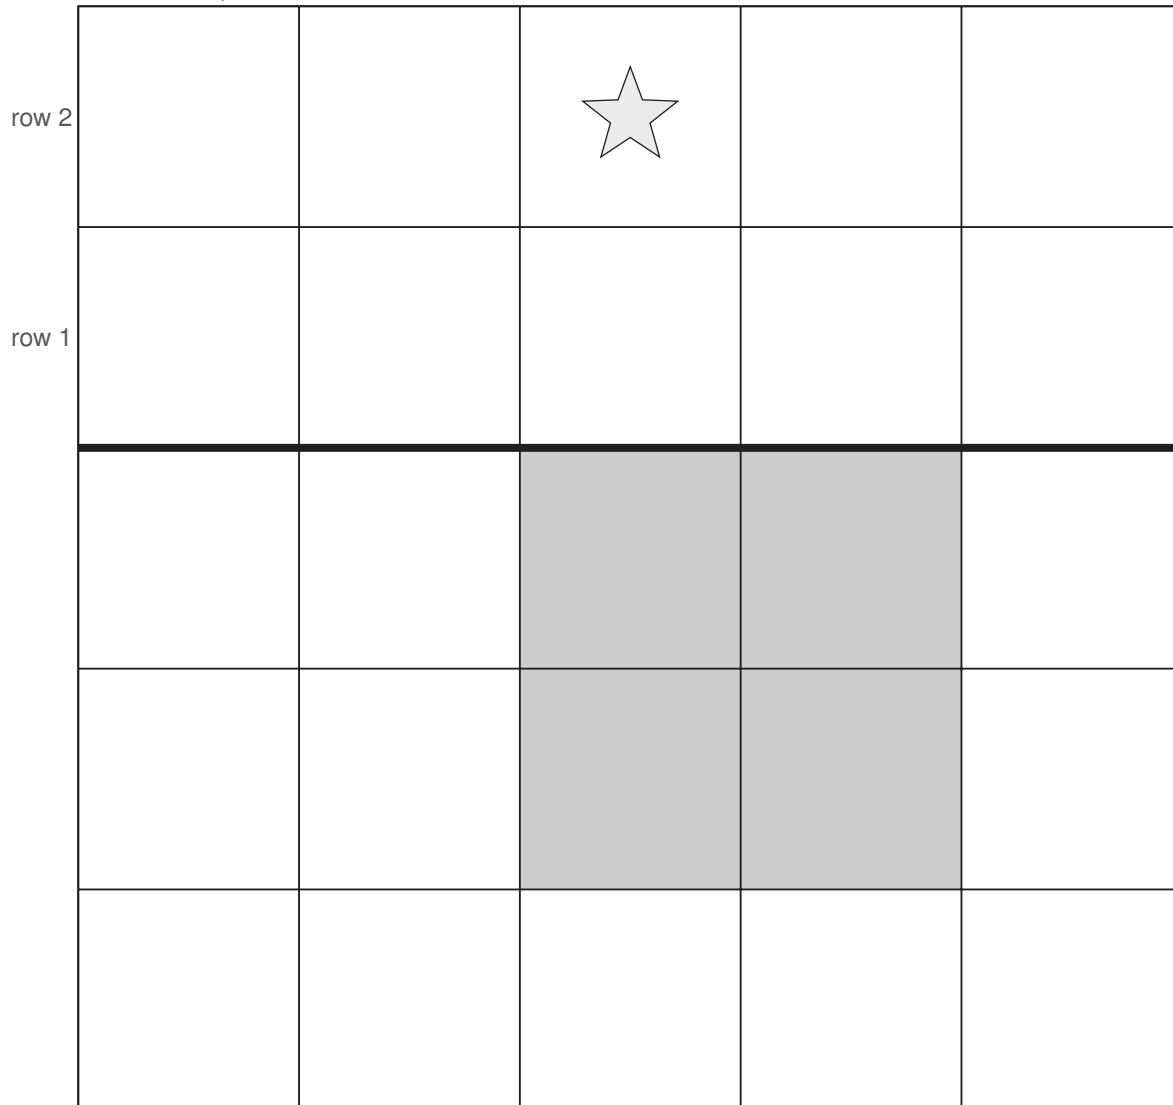

Problem 6: On strip O, put checkers on any home squares you like, up to four checkers. Draw a dot in each square you used. Then jump and try to reach the star. Draw an X on the farthest square across the river that any checker reached. Then look at strips L, M, N and O together and circle the farthest square any checker ever reached: 1 2

Strip O

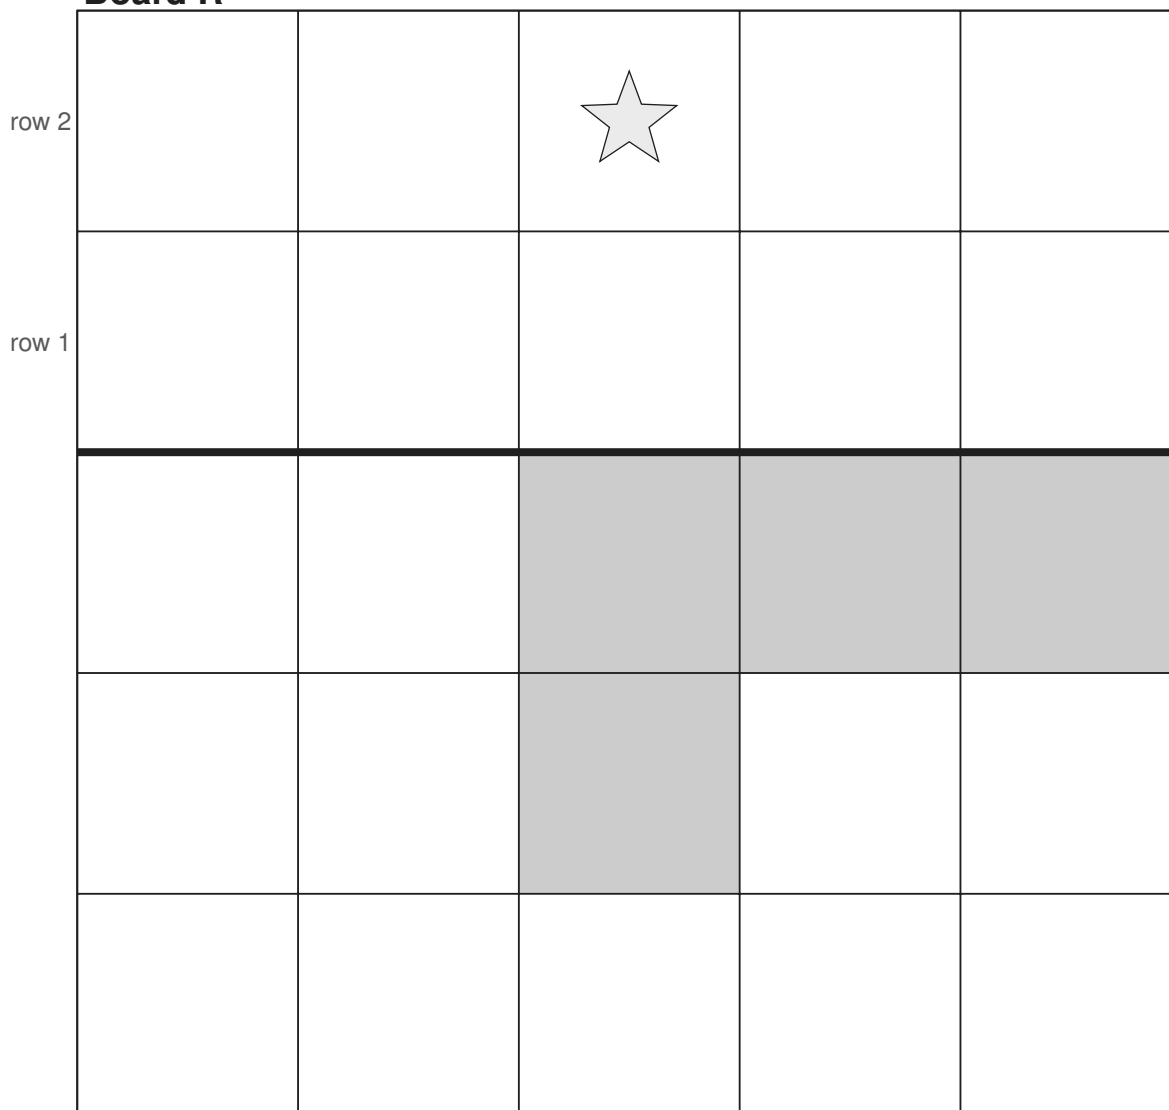

Problem 7: Board P is a grid. The thick line is the river, and the two rows below it are the home side. On a board, jumps go up, down, left or right, never slanted. Put checkers on the two gray squares. Cross the river with one jump. Draw an X where the checker lands.

Board P

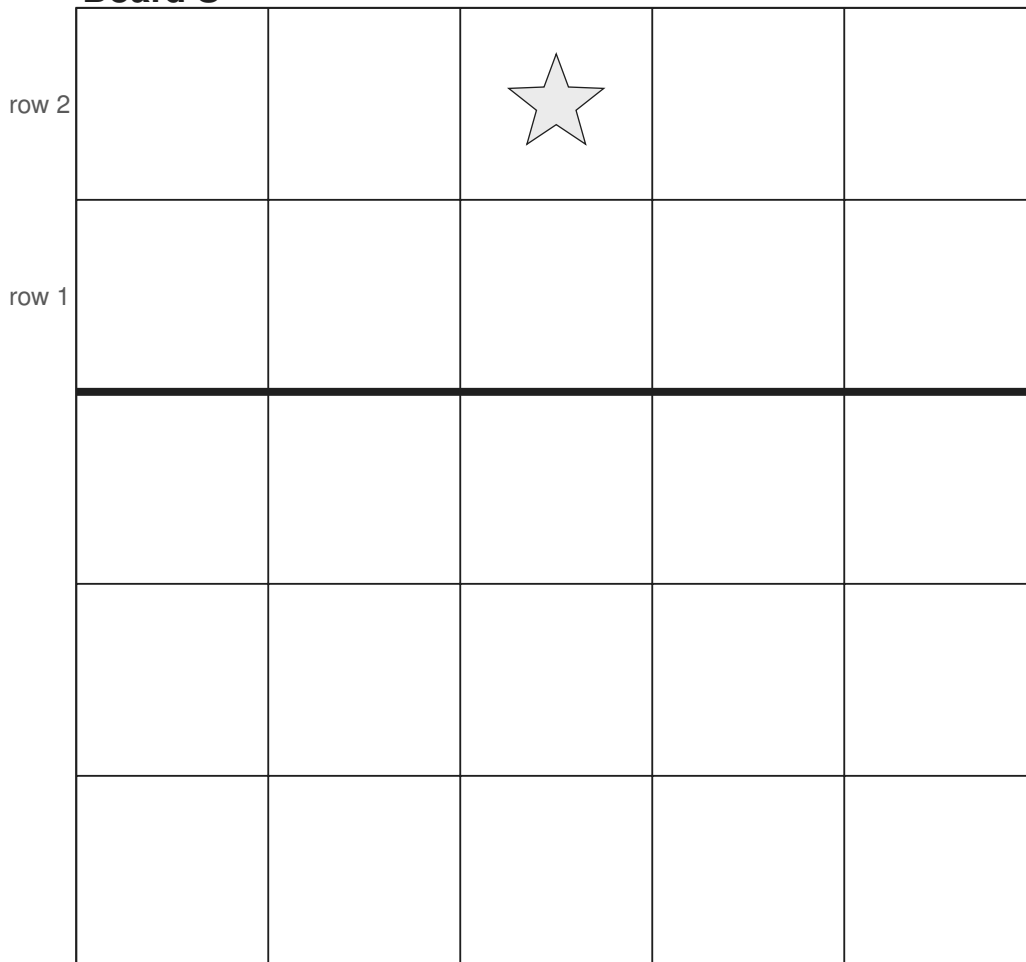

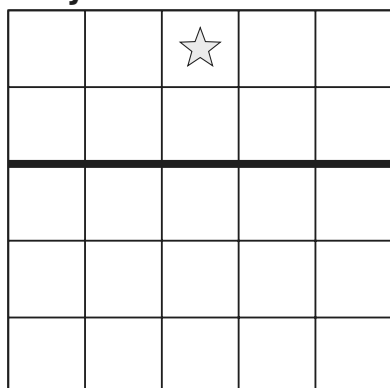

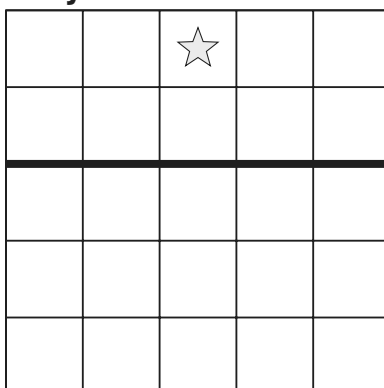

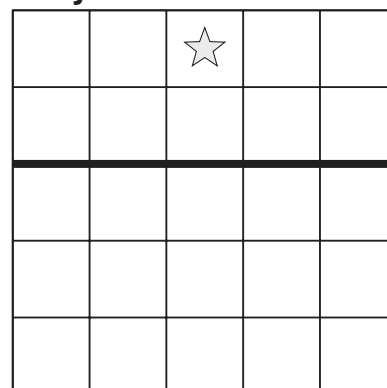

Problem 8: Board Q has four gray squares in a block. Put a checker on each one. Jump as many times as you like and try to get a checker onto the star, in the second row across the river. Draw an X on the highest square any checker reached.

Board Q

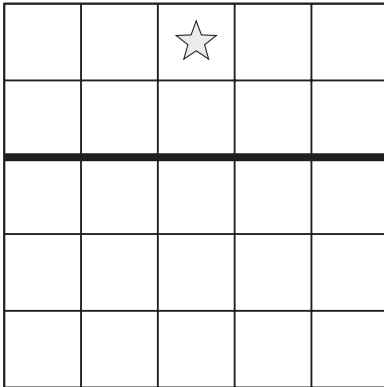

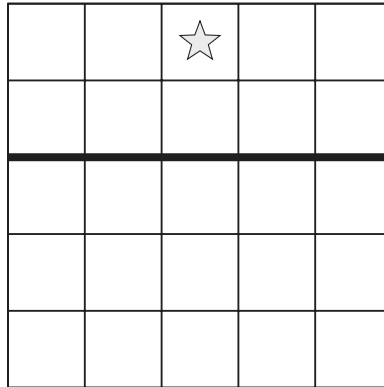

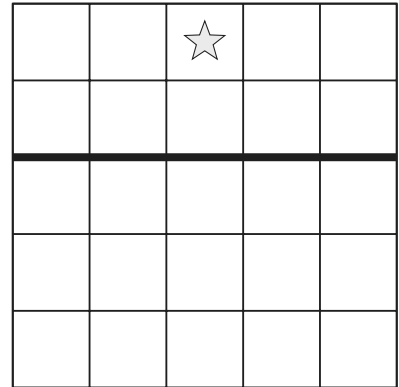

Problem 9: Board R has four gray squares in a different shape. Put a checker on each one. Try to get a checker onto the star. Draw an X on the highest square any checker reached. If a checker reaches the star, draw an arrow for each jump you made, in order.

Board R

Problem 10: Board S has no gray squares. Put only three checkers on home squares, any way you like, and try to get a checker onto the star. Try three different ways. For each way, draw a dot on each square you used on one of the small boards, and draw an X on the highest square a checker reached.

Board S**Way 1****Way 2****Way 3**

Problem 11: Use board S again. Put four checkers on home squares in a new shape, not the block of board Q and not the shape of board R. Try to get a checker onto the star. Draw the shape on a small board with dots, and draw an X on the highest square a checker reached. Try three shapes. Then circle every small board where a checker reached the star.

Shape 1**Shape 2****Shape 3**

Problem 12: Board T on the next page has eight gray squares: five along the river and three below the middle one. Put a checker on each one. Try to get a checker onto the big star, in the third row across the river. Draw an X on the highest square any checker reached. Set the checkers up again and try a different order of jumps if you did not reach the star.

Board T
