

Problem 1: Put a penny on each gray square. A penny may jump over the penny next to it and land on the empty square just past it. Take the jumped penny off the board. Make the jump. Color the square where the penny landed.

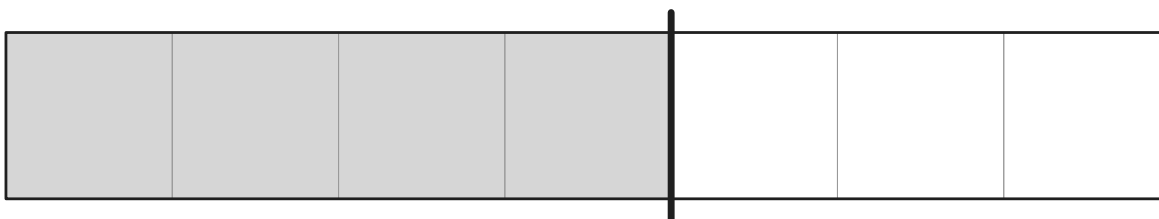

Problem 2: Put a penny on each of the 3 gray squares. Jump until no more jumps are possible. Color the square farthest past the thick line that a penny landed on. Write how many pennies are left in the box.

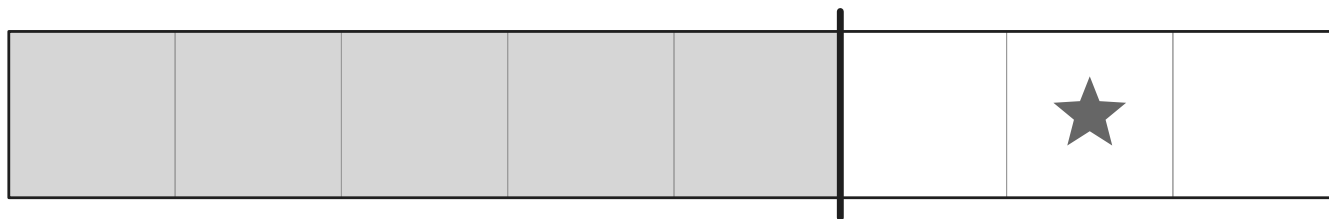

pennies left

Problem 3: Now 4 pennies. Jump until no more jumps are possible. Color the farthest square a penny landed on. Write how many pennies are left.

pennies left

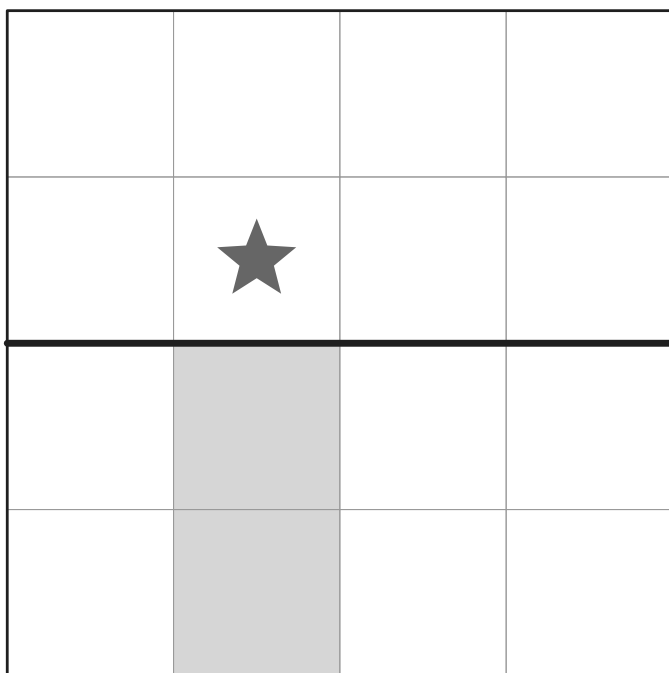

Problem 4: Now 5 pennies. Try to land a penny on the star. Jump until no more jumps are possible. Color the farthest square a penny landed on. Write how many pennies are left.

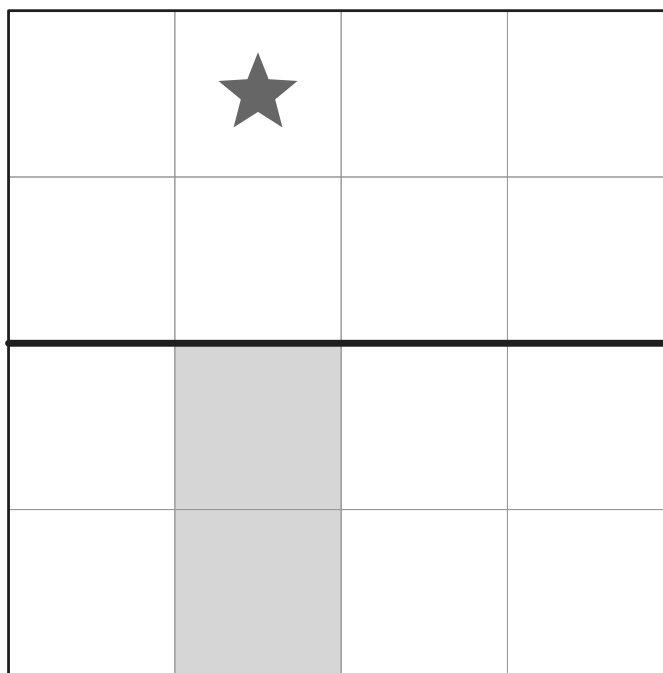

pennies left

Problem 5: Board A: put a penny on each gray square. Jump so that a penny lands on the star. Board B: the same two pennies, but the star is higher. Try to land a penny on the star. If no penny can reach the star, color the highest square a penny did land on.

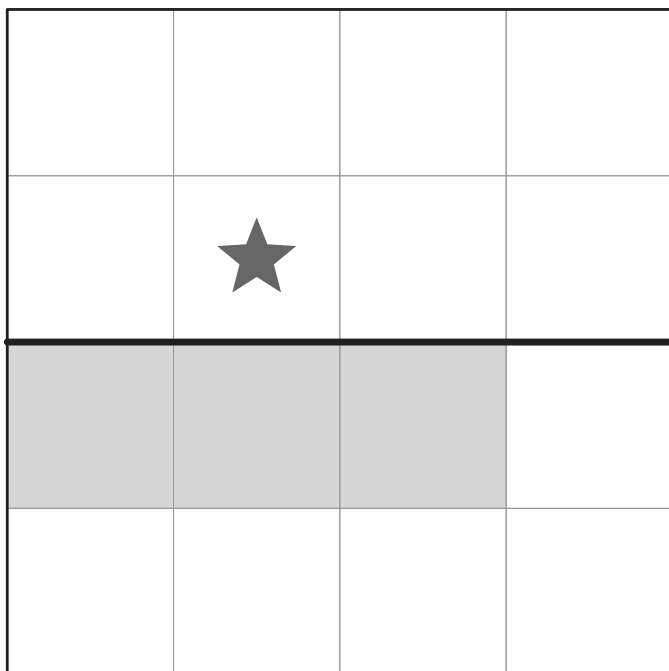

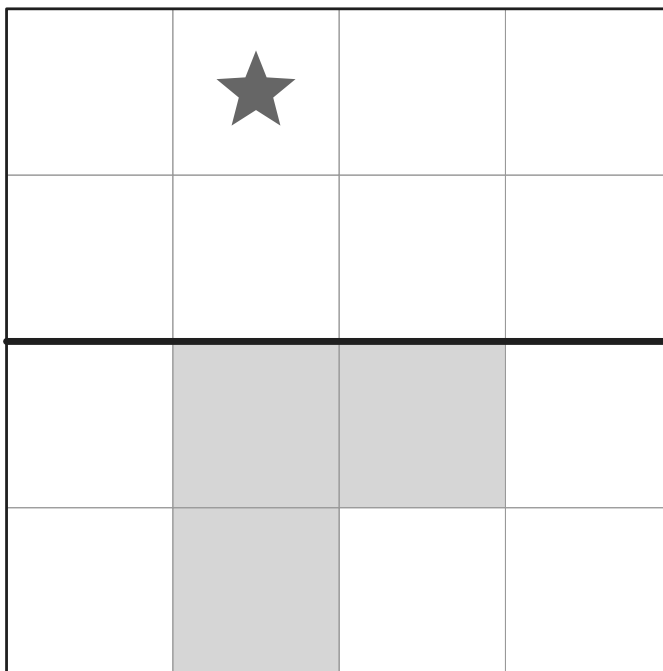

A

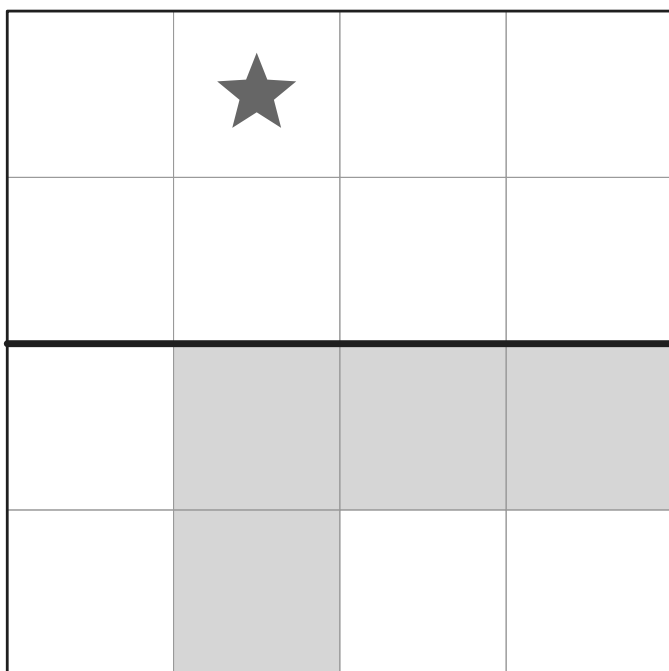

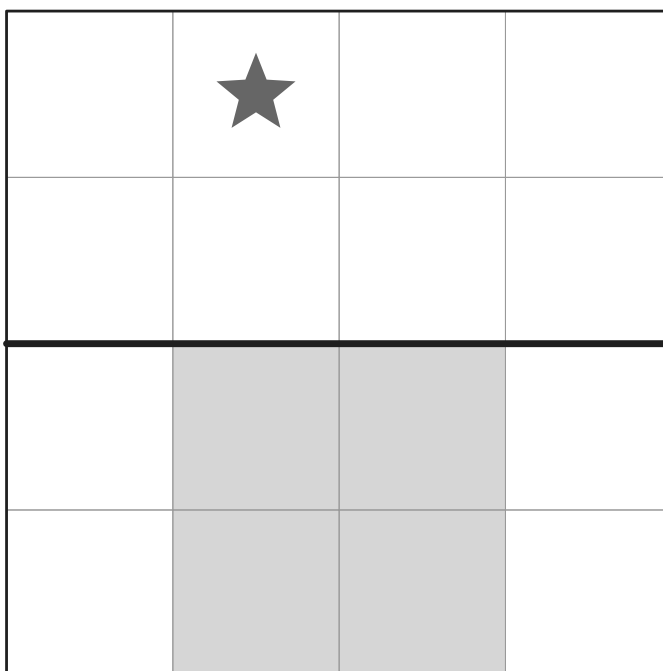

B

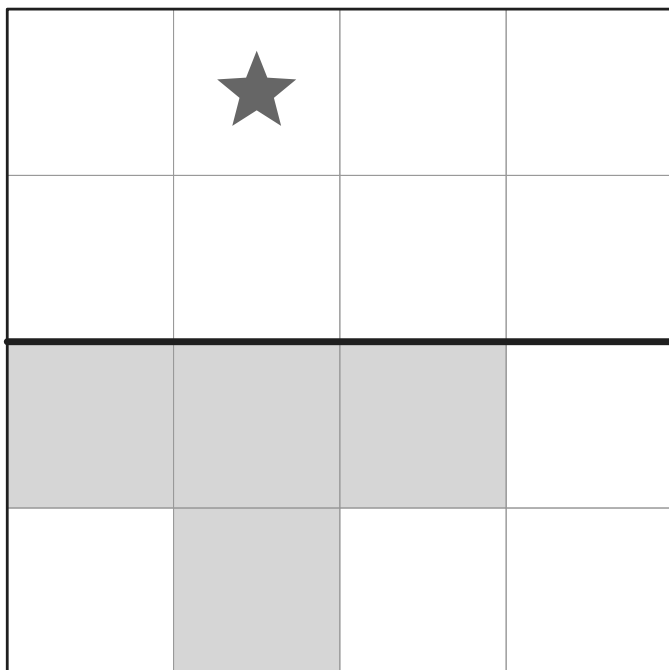

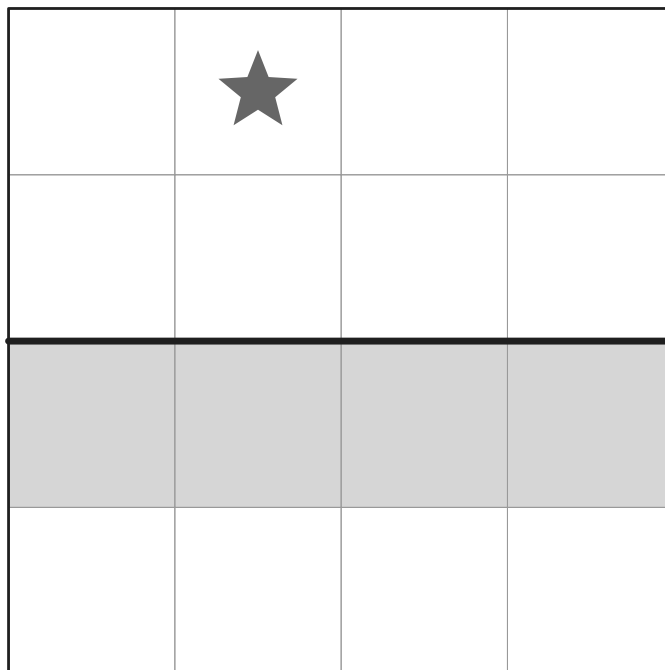

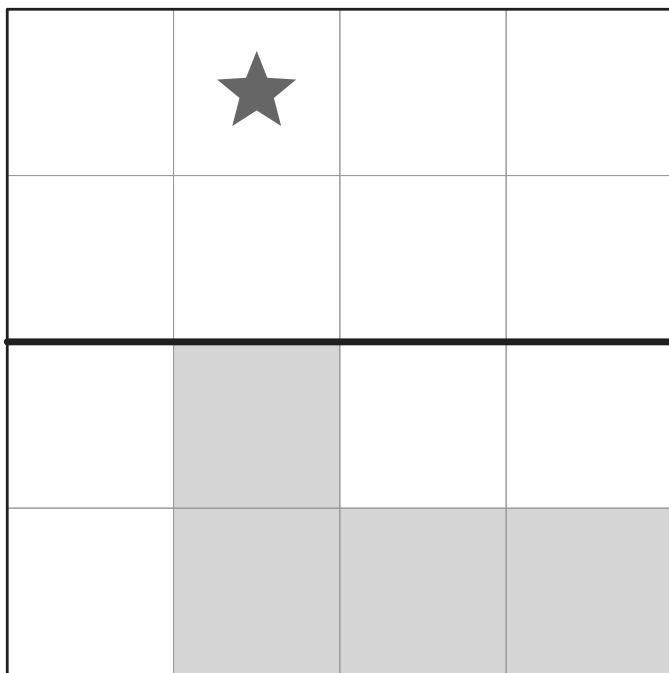

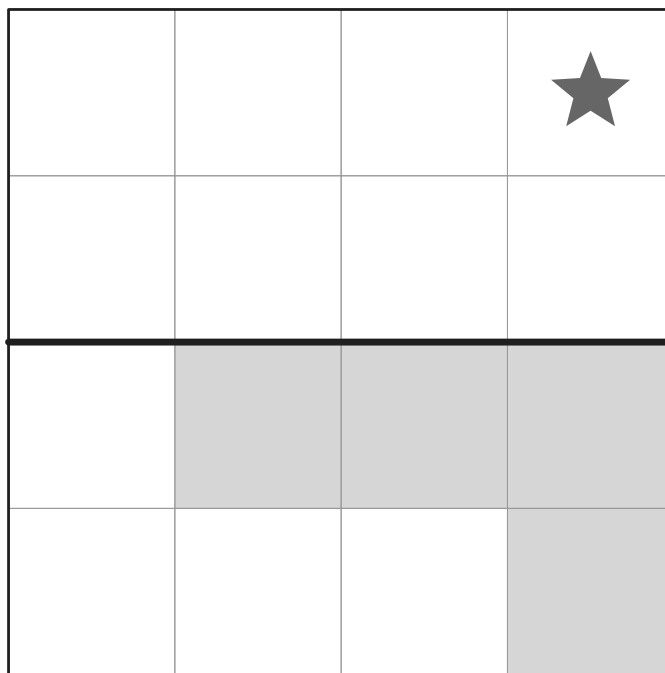

Problem 6: Boards C and D each have 3 gray squares. Put a penny on each gray square. Try to land a penny on the star. Color the highest square a penny landed on.

C**D**

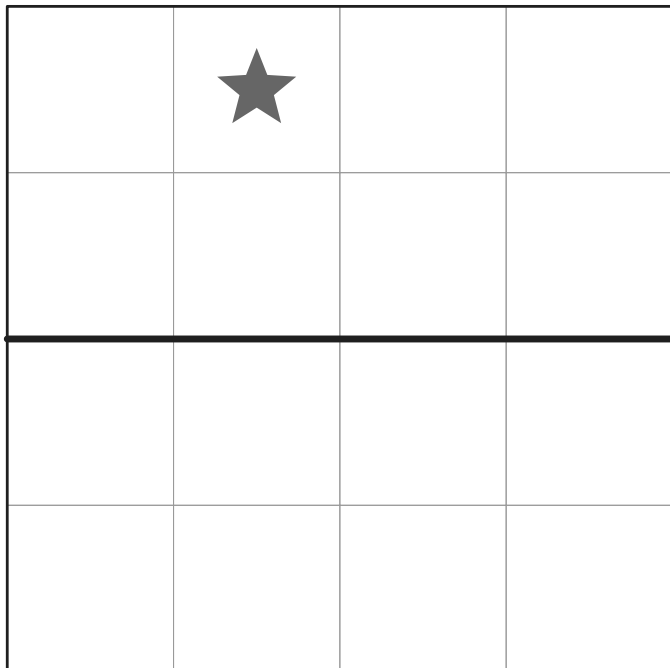

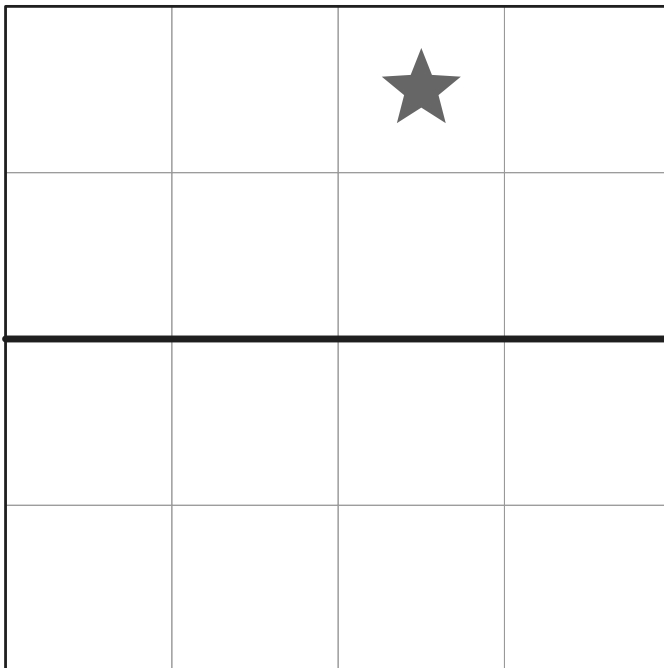

Problem 7: Boards E and F each have 4 gray squares. Put a penny on each gray square. Try to land a penny on the star. Color the highest square a penny landed on.

E**F**

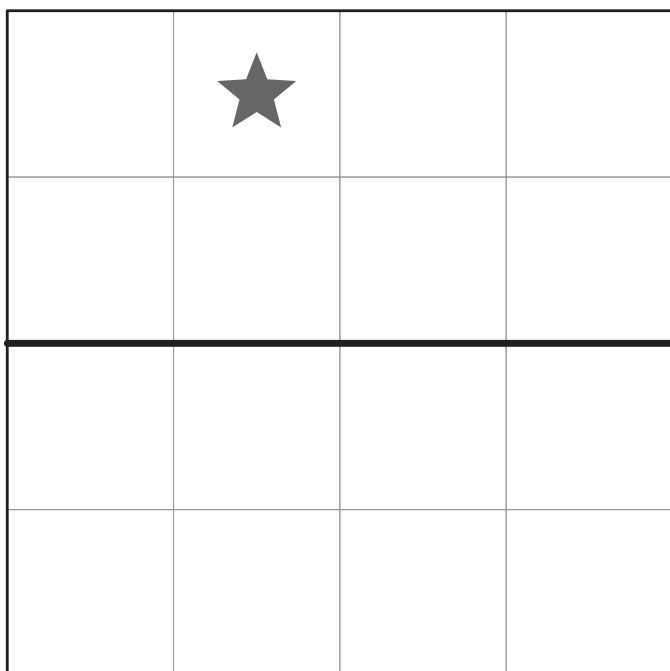

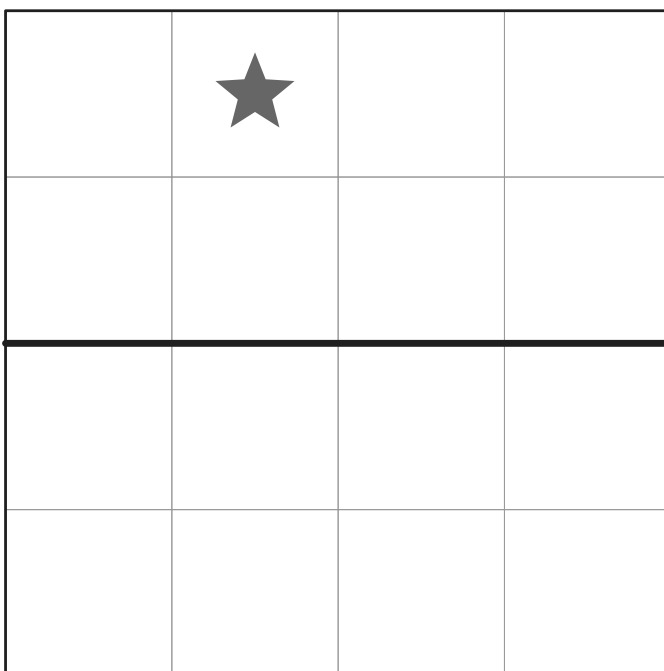

Problem 8: Boards G, H, I and J also have 4 gray squares each. Put a penny on each gray square. Try to land a penny on the star. Color the highest square a penny landed on. Then look at boards E to J together and find the two boards where a penny reached the star.

G**H****I****J**

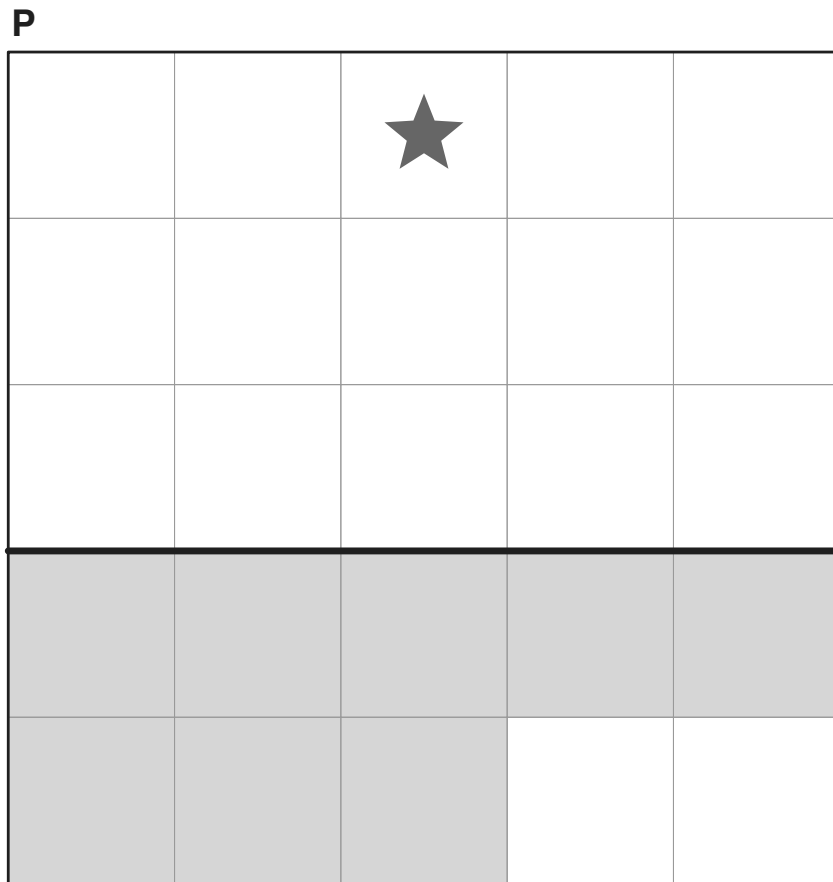

Problem 9: Boards K and L are empty. Put 4 pennies below the thick line so that one of them can land on the star. When it works, color the 4 squares where your pennies started. Then try again on board L, where the star is in a different place.

K**L**

Problem 10: Boards M and N are empty too. Put 3 pennies below the thick line and try to land one of them on the star. Color the highest square a penny landed on. Then try 5 pennies on board N and color the squares where your pennies started.

M**N**

Problem 11: Board P has 8 gray squares. Put a penny on each. Try to land a penny on the star. Color the highest square a penny landed on.

Problem 12: Put the pennies back on the 8 gray squares of board P and play again. Count your jumps out loud. Count how many pennies are left when you stop. Write both numbers in the boxes.
