

Problem 1: Put a checker on each gray square of strip A. A jump: a checker hops over the checker right next to it into the empty square just after it, and the checker it hopped over comes off. Make one jump.

Draw an X in the square where the checker lands.

Set up strip B. Make a jump that goes to the left.

Draw an X where it lands.

Strip A

Strip B

Problem 2: On strips C, D and E, put a checker on each gray square. Try to make a jump.

Circle YES if a jump is possible and NO if no jump is possible.

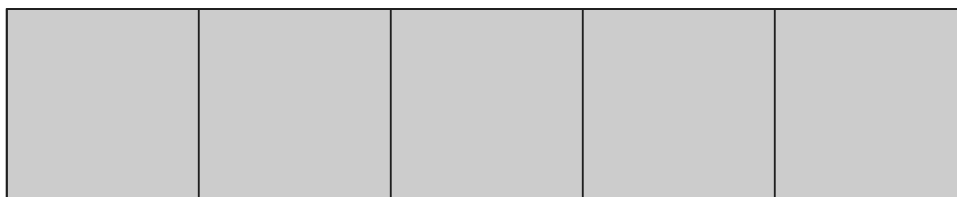

Strip C

YES NO

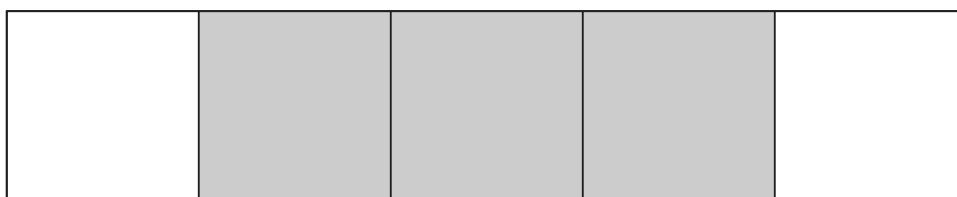

Strip D

YES NO

Strip E

YES NO

Problem 3: Work with a partner: one of you jumps, the other counts.

On strip F, put a checker on each gray square. Jump until no jump is possible.

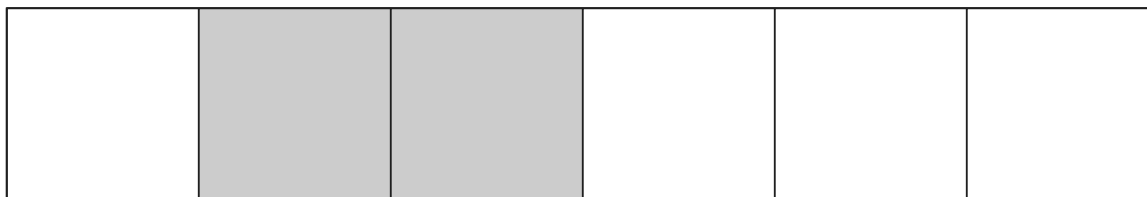

Count the checkers left and write the number in the first box.

Set up strip F again and jump in a different order. Write the number of checkers left in the second box.

Do the same on strips G and H. Swap jobs after each strip.

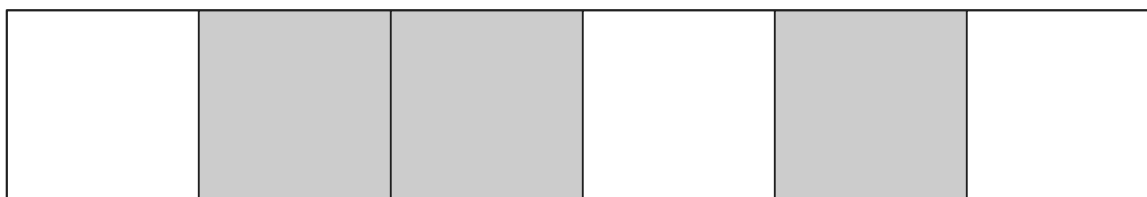

Strip F

--	--

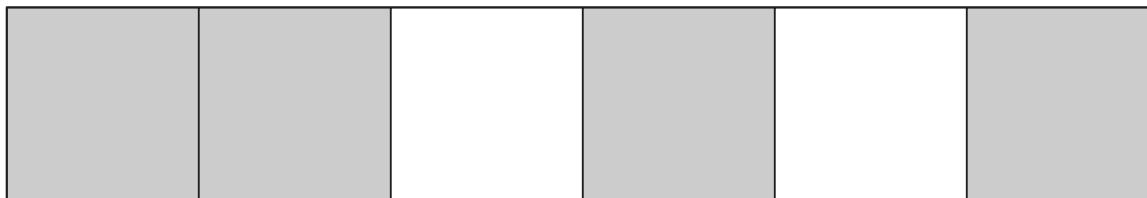

Strip G

--	--

Strip H

--	--

Problem 4: The thick line on strip I is a river. The four squares to the left of it are the home side.

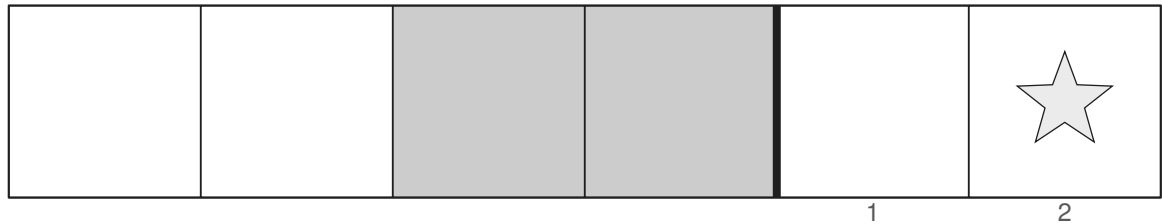

Put checkers on the two gray squares of strip I. Cross the river with one jump.

Draw an X where the checker lands.

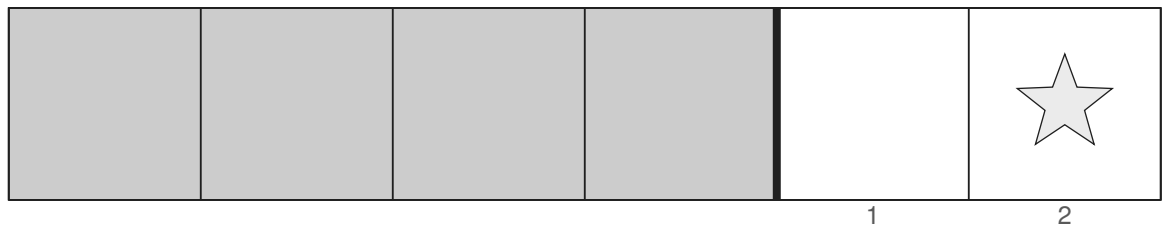

On strip J, put checkers on the four gray squares. Take turns: one jumps, the other watches where the checkers land. Jump as many times as you like and try to get a checker onto the square with the star.

Draw an X on the farthest square across the river that any checker reached.

Strip I

Strip J

Problem 5: Draw a dot in some of the four home squares of strip K, for the person next to you.

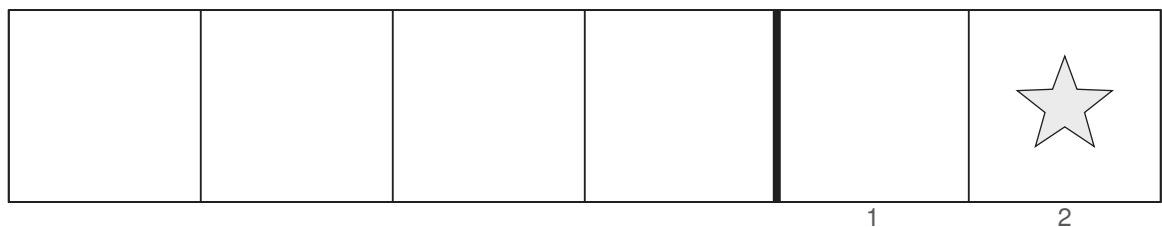

Swap pages. Put a checker on each dot you were given. Try to get a checker onto the star.

Draw an X on the farthest square across the river that any checker reached.

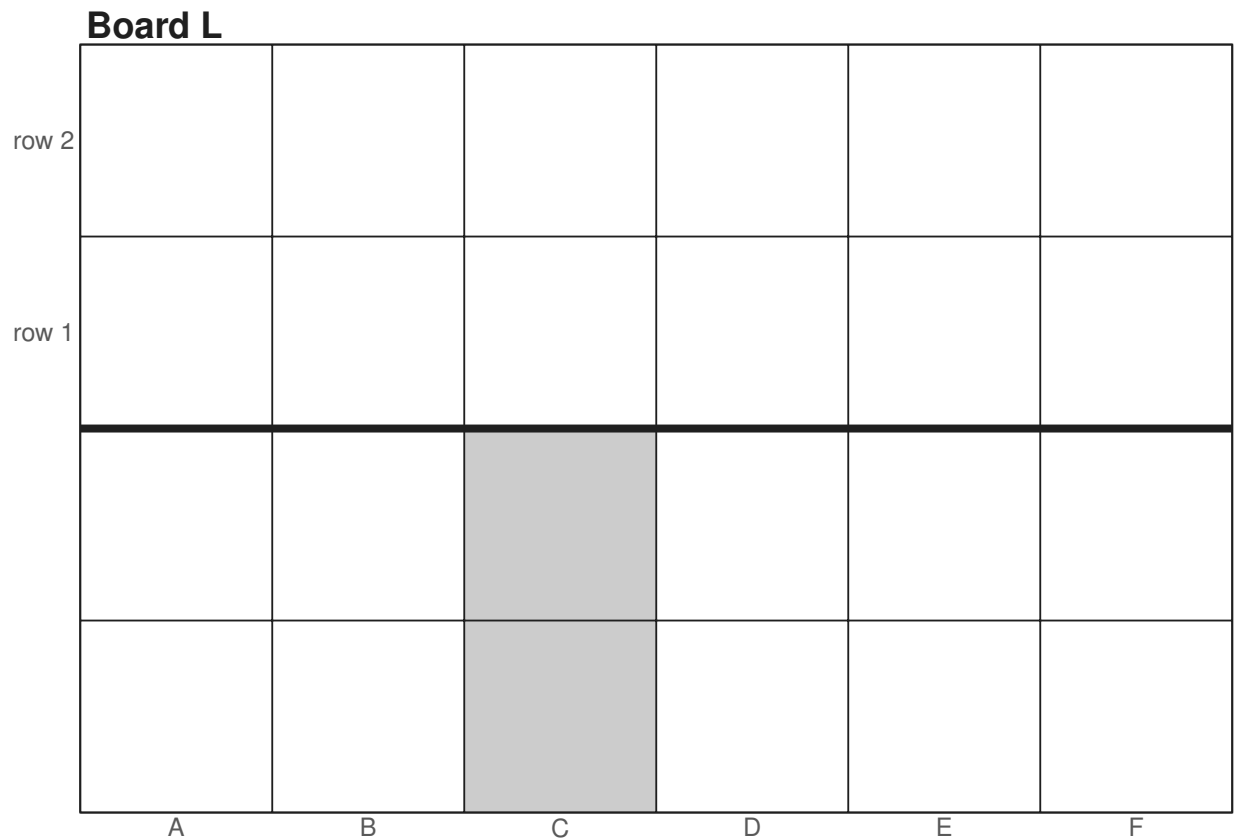

Look at strips I, J and K together. Circle the farthest square any checker ever reached:

1 2

Strip K

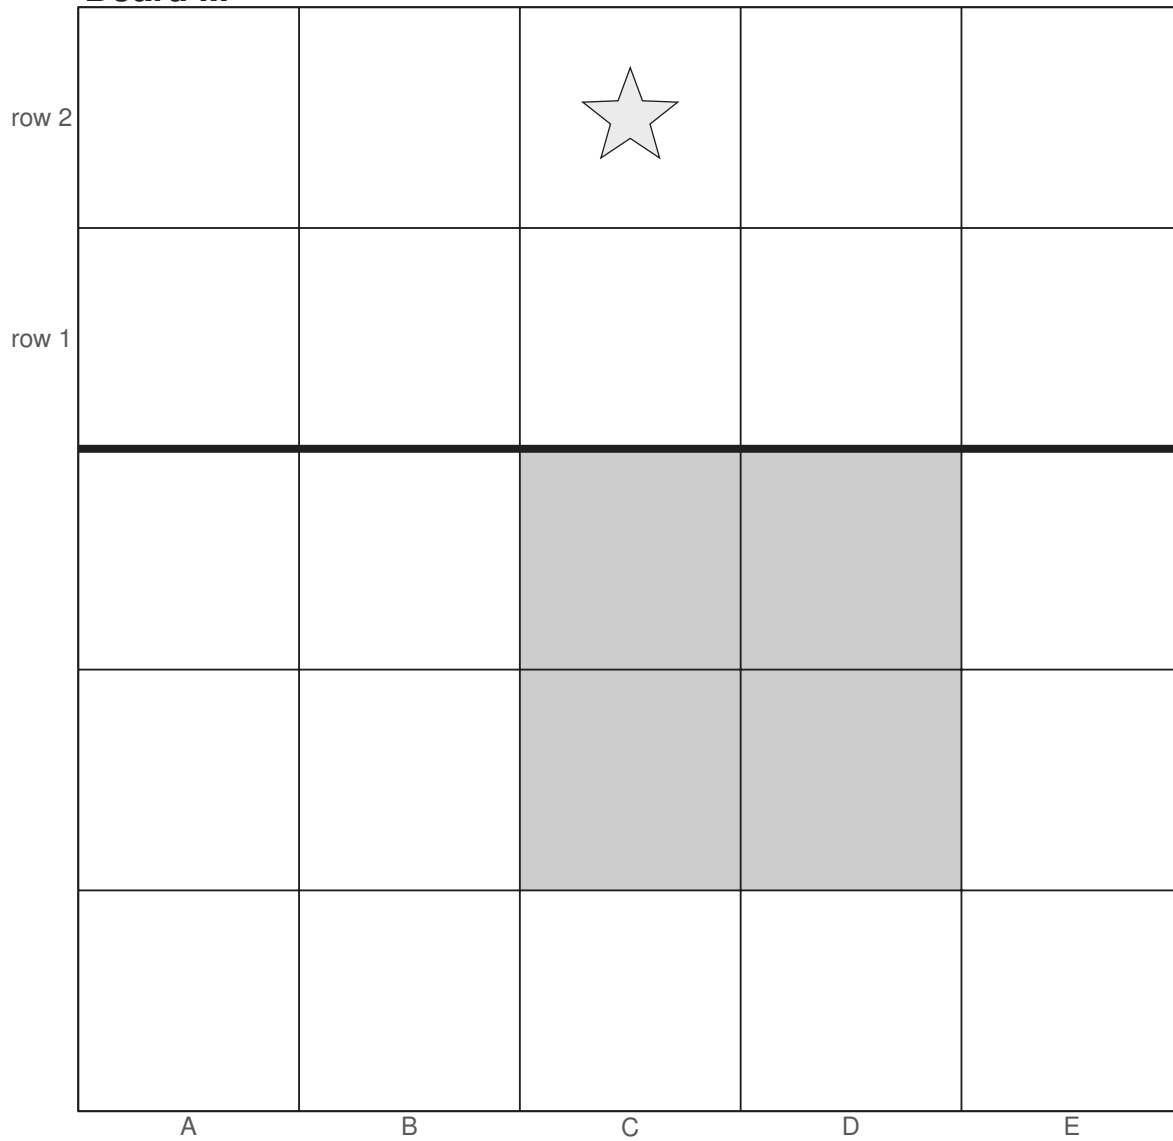

Problem 6: Board L is a grid. The thick line is the river, and the two rows below it are the home side. On a board, jumps go up, down, left or right, never slanted. Put checkers on the two gray squares. Cross the river with one jump. Draw an X where the checker lands.

Problem 7: Board M has four gray squares in a block. Put a checker on each one. Jump as many times as you like and try to get a checker onto the star, in the second row across the river.

Draw an X on the highest square any checker reached.

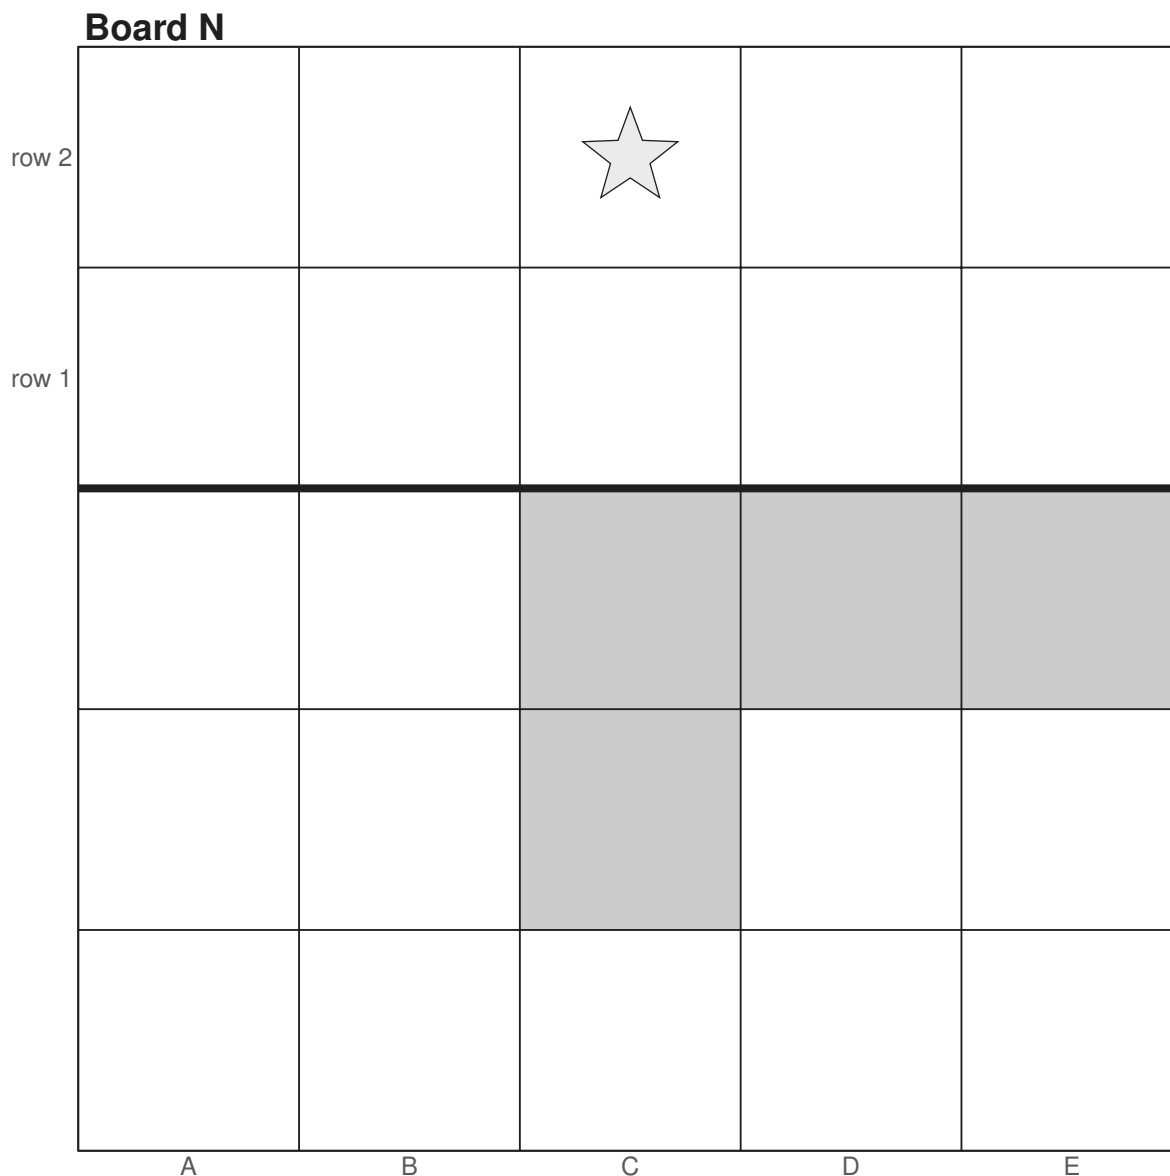

Board M

Problem 8: Board N has four gray squares in a different shape. Put a checker on each one. Try to get a checker onto the star.

Draw an X on the highest square any checker reached.

If a checker reaches the star, draw an arrow for each jump you made, in order.

Problem 9 (Extra): Board O has no gray squares. Put only three checkers on home squares, any way you like. Try to get a checker onto the star.

Ask the adult to draw a dot on small board 9 for each square you used, and an X on the highest square a checker reached.

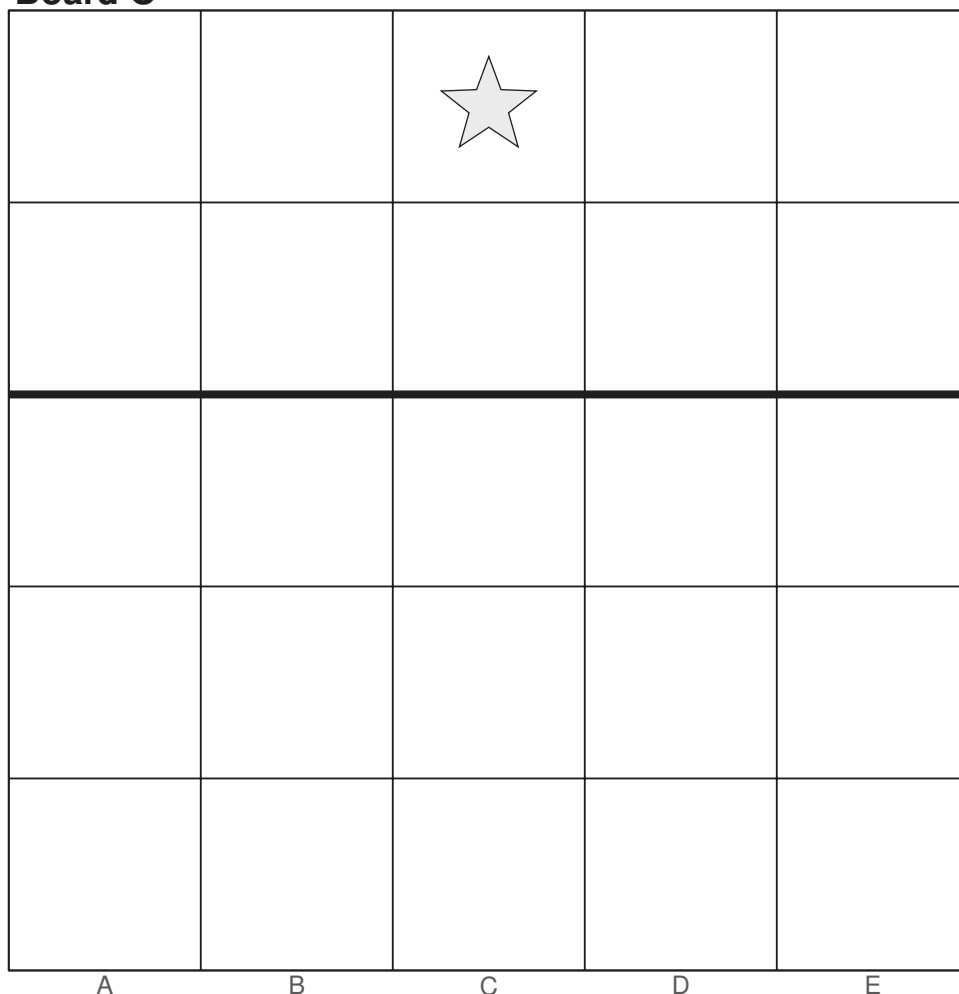

Try again with the three checkers in different places. Circle YES if a checker ever reached the star, NO if not: YES NO

Problem 10 (Extra): Put four checkers on home squares of board O in a new shape, not the block of board M and not the shape of board N. Try to get a checker onto the star.

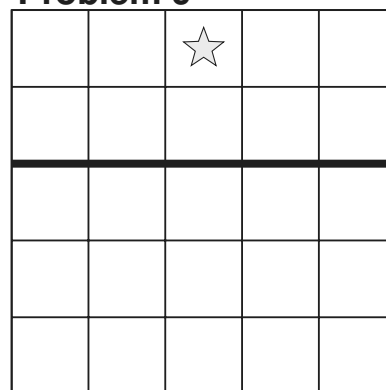

Ask the adult to draw your shape on small board 10 with dots, and an X on the highest square a checker reached.

Show your small board to the others at your table.

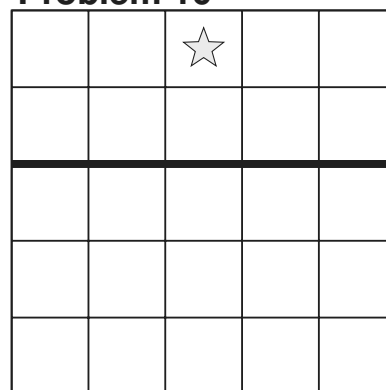

Board O

Problem 9

Problem 10

Problem 11 (Extra): Board P has eight gray squares: five along the river and three below the middle one. The whole table plays on one board. Put a checker on each gray square.

Take turns saying a jump. The adult makes the jump you say.

Try to get a checker onto the big star, in the third row across the river. Draw an X on the highest square any checker reached.

If you did not reach the star, set up the checkers again and try a different order of jumps.
