

Problem 1: Put a penny on each gray square of strip A. A jump: a penny hops over the penny right next to it into the empty square just after it, and the penny it hopped over comes off. Make one jump. Draw an X in the square where the penny lands. Then set up strip B and make a jump that goes to the left. Draw an X where it lands.

Strip A

Strip B

Problem 2: On strips C, D and E, put a penny on each gray square. Try to make a jump. Circle YES if a jump is possible and NO if no jump is possible.

Strip C

YES NO

Strip D

YES NO

Strip E

YES NO

Problem 3: On each of strips F to K, put a penny on each gray square. Jump until no jump is possible. Count the pennies left on the strip and write the number in the first box. Then set the strip up again and jump in a different order. After your tries, write the smallest number of pennies you managed to leave in the second box.

Strip F first try: fewest:

--	--	--	--	--	--

Strip G first try: fewest:

--	--	--	--	--	--

Strip H first try: fewest:

--	--	--	--	--	--

Problem 3, continued: Strips I, J and K. Put a penny on each gray square, jump until no jump is possible, and write the number of pennies left in the first box. Set the strip up again, try other orders, and write the smallest number you managed in the second box.

Strip I first try: fewest:

--	--	--	--	--	--

Strip J first try: fewest:

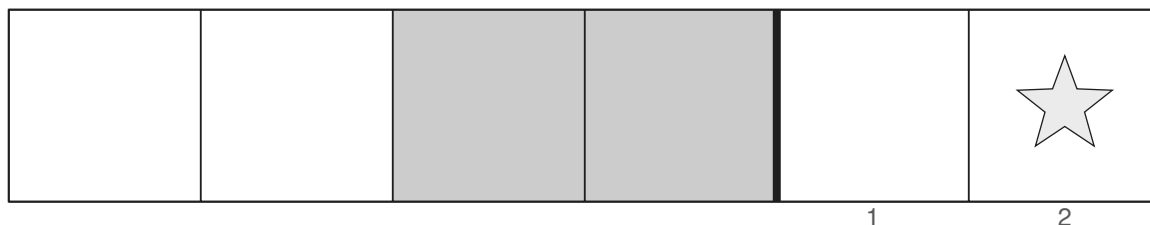

--	--	--	--	--	--

Strip K first try: fewest:

--	--	--	--	--	--

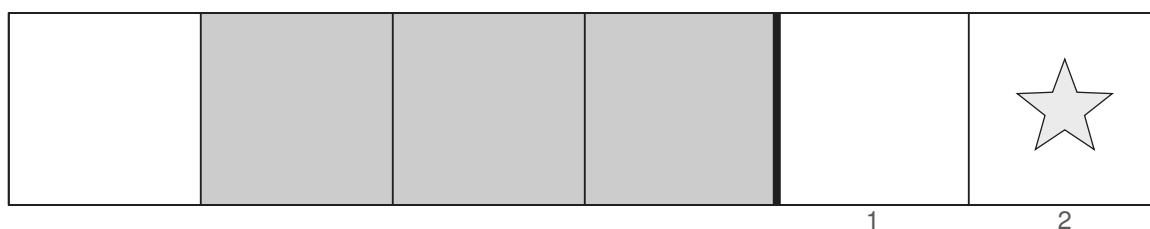

Problem 4: The thick line on strip L is a river. The four squares to the left of it are the home side. Put pennies on the two gray squares. Cross the river with one jump. Draw an X where the penny lands. On strips M, N and O, put pennies on the gray squares, jump as many times as you like, and try to get a penny onto the square with the star. If a penny gets across the river, circle YES and draw an X on the farthest square across the river that any penny reached. If no penny gets across, circle NO.

Strip L

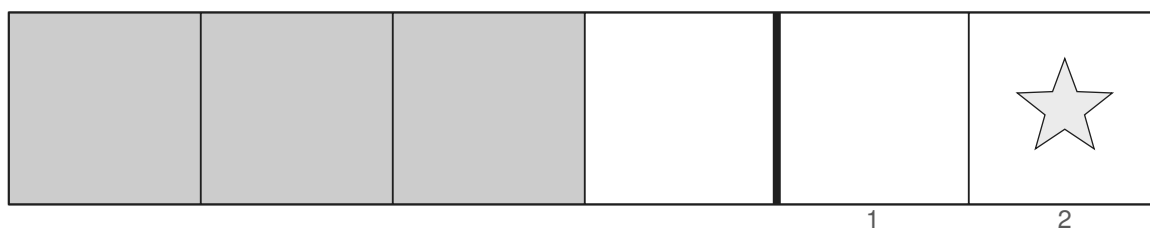

Strip M

YES NO

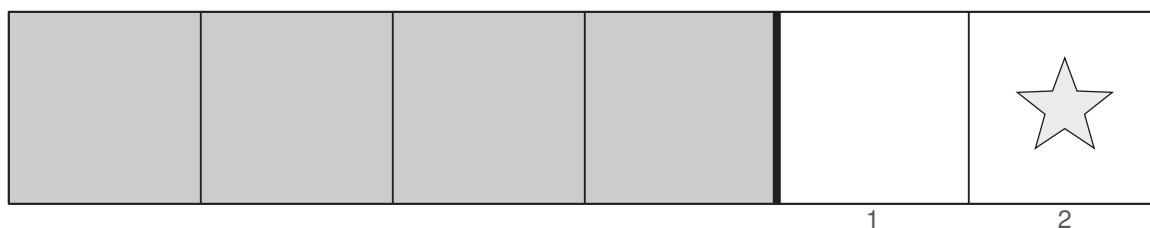

Strip N

YES NO

Strip O

YES NO

Problem 5: On strips P, Q and R, put pennies on any home squares you like, up to four pennies, a different set on each strip. Draw a dot in each square you used. Then jump and try to reach the star. Circle YES or NO, and draw an X on the farthest square across the river that any penny reached. Then look at strips L to R together and circle the farthest square any penny ever reached: 1 2

Strip P

YES NO

Strip Q

YES NO

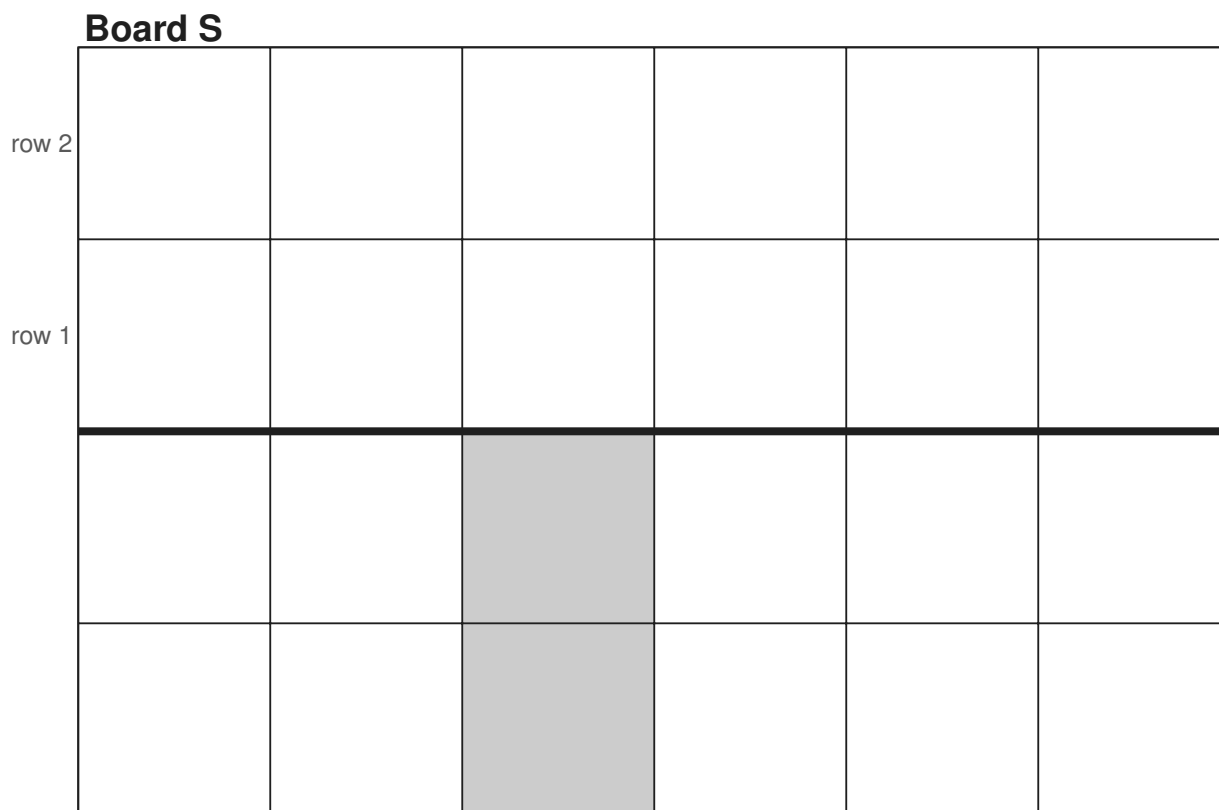

A horizontal number line is shown, divided into six equal segments by vertical tick marks. The first four segments are empty. The fifth segment is labeled with the number '1' below it. The sixth segment contains a five-pointed star and is labeled with the number '2' below it.

Strip R

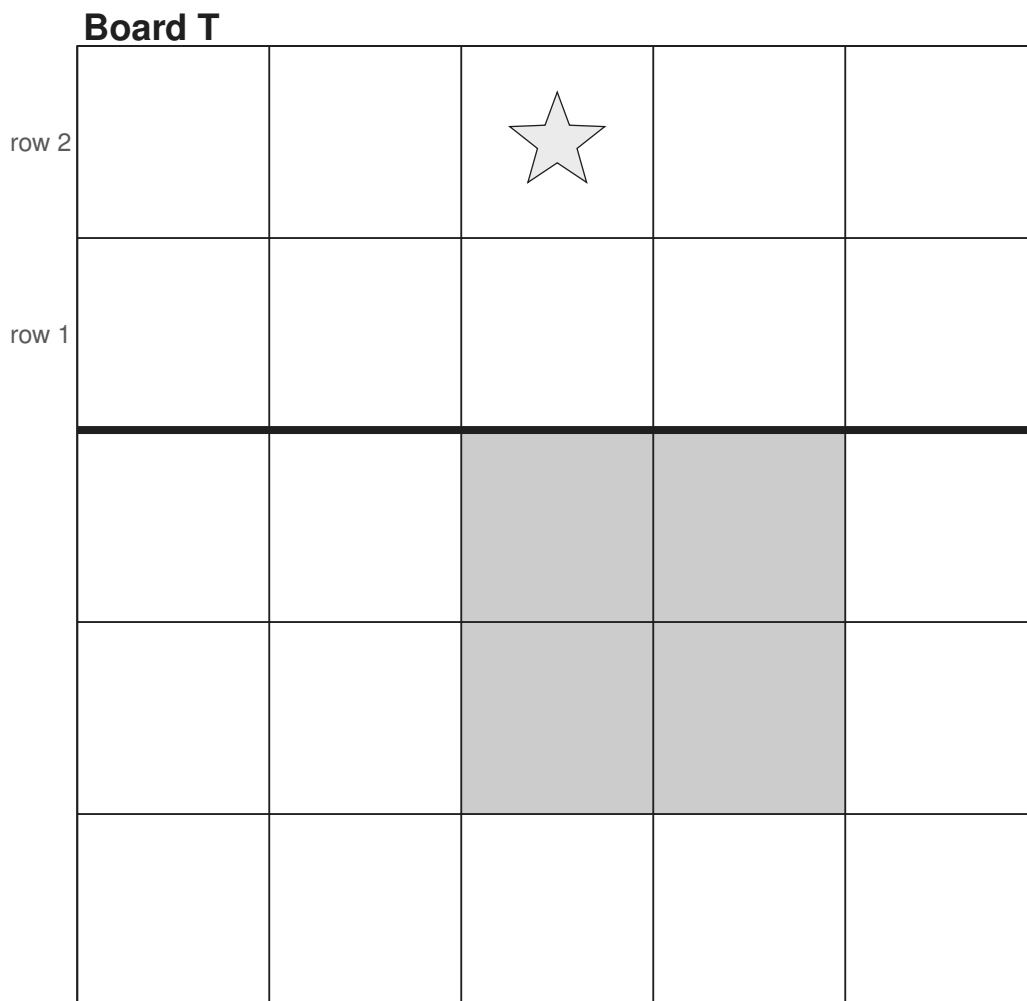

YES NO

A horizontal number line is shown, divided into six equal segments by vertical tick marks. The first four segments are empty. The fifth segment is labeled with the number '1' below it. The sixth segment contains a star and is labeled with the number '2' below it.

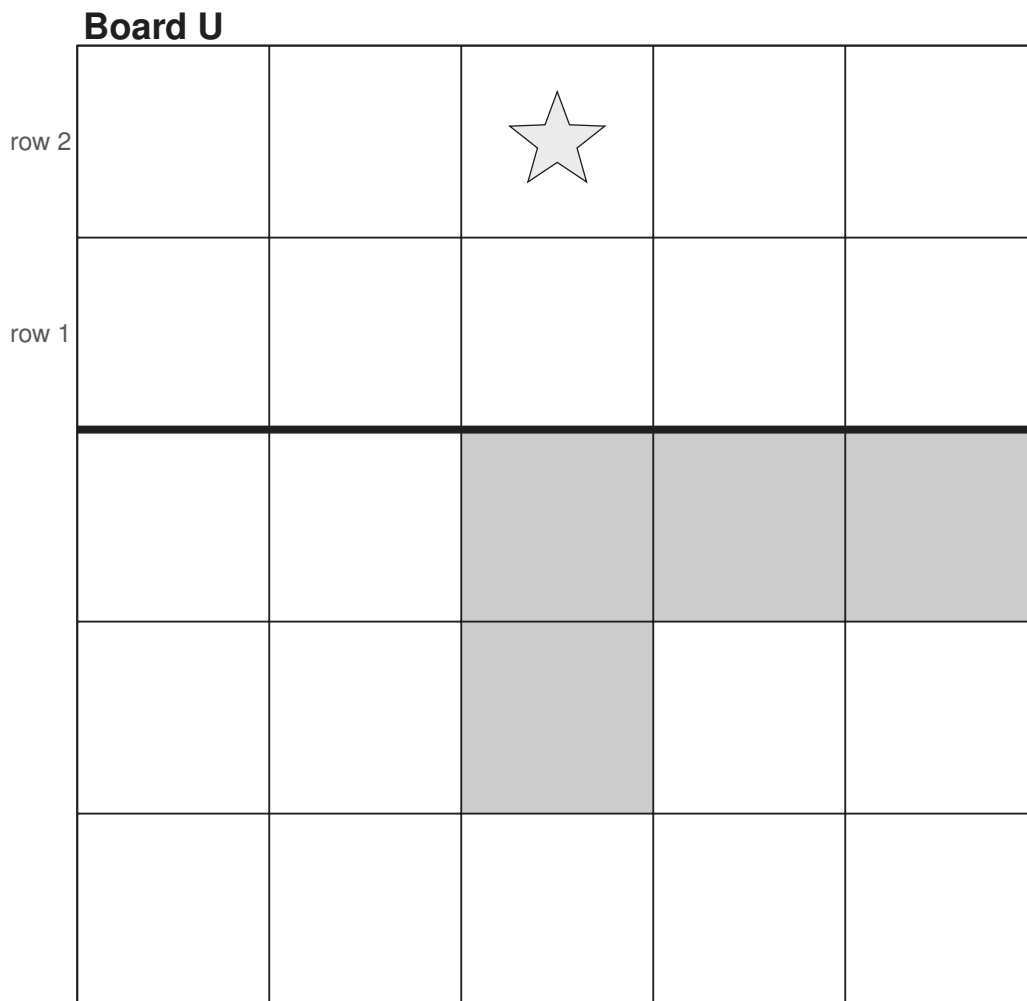

Problem 6: Board S is a grid. The thick line is the river, and the two rows below it are the home side. On a board, jumps go up, down, left or right, never slanted. Put pennies on the two gray squares. Cross the river with one jump. Draw an X where the penny lands.

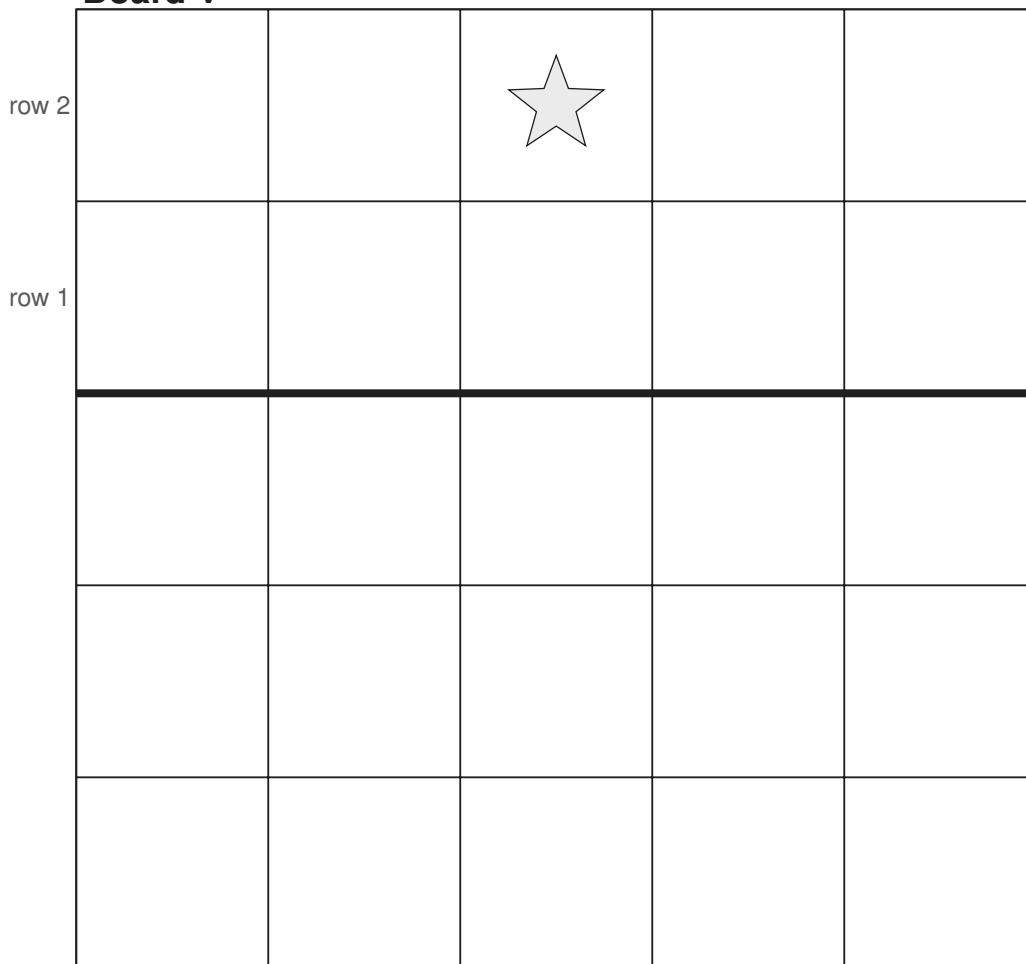

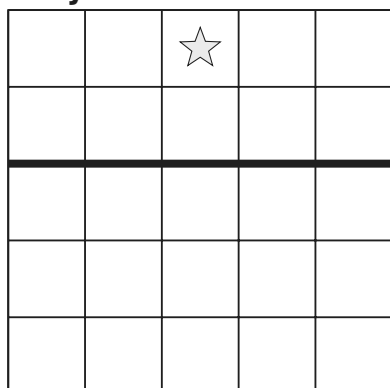

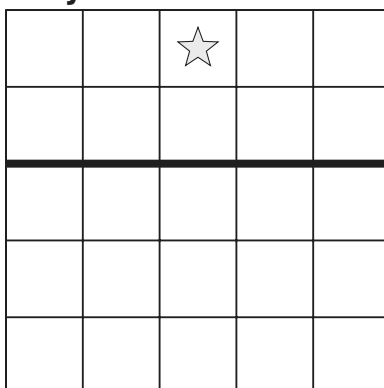

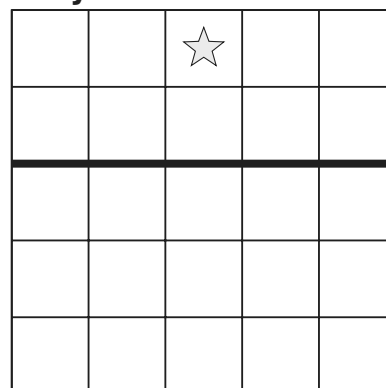

Problem 7: Board T has four gray squares in a block. Put a penny on each one. Jump as many times as you like and try to get a penny onto the star, in the second row across the river. Draw an X on the highest square any penny reached.

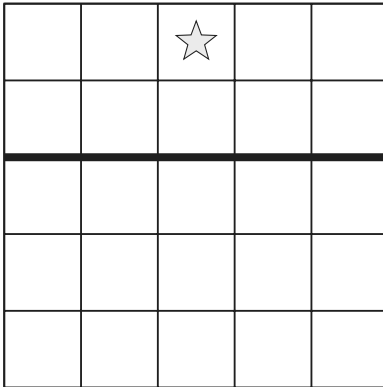

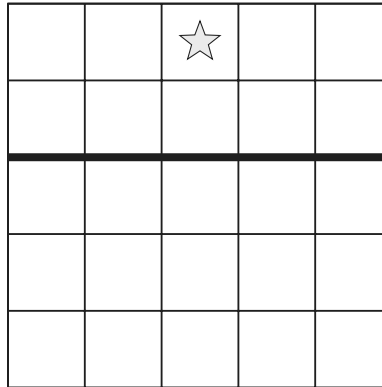

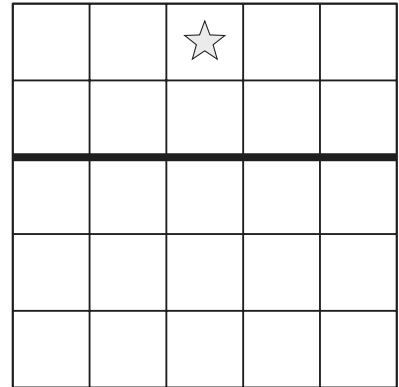

Problem 8: Board U has four gray squares in a different shape. Put a penny on each one. Try to get a penny onto the star. Draw an X on the highest square any penny reached. If a penny reaches the star, draw an arrow for each jump you made, in order.

Problem 9: Board V has no gray squares. Put only three pennies on home squares, any way you like, and try to get a penny onto the star. Try three different ways. For each way, draw a dot on each square you used on one of the small boards, and draw an X on the highest square a penny reached.

Board V**Way 1****Way 2****Way 3**

Problem 10: Use board V again. Put four pennies on home squares in a new shape, not the block of board T and not the shape of board U. Try to get a penny onto the star. Draw the shape on a small board with dots, and draw an X on the highest square a penny reached. Try three shapes. Then circle every small board where a penny reached the star.

Shape 1**Shape 2****Shape 3**

Problem 11: Board W on the next page has eight gray squares: five along the river and three below the middle one. Put a penny on each one. Try to get a penny onto the big star, in the third row across the river. Draw an X on the highest square any penny reached. Set the pennies up again and try a different order of jumps if you did not reach the star.
