

Stretch a thread from O to another dot T. A dot exactly on the thread between O and T blocks T. B marks a blocker. Keep O fixed while you test.

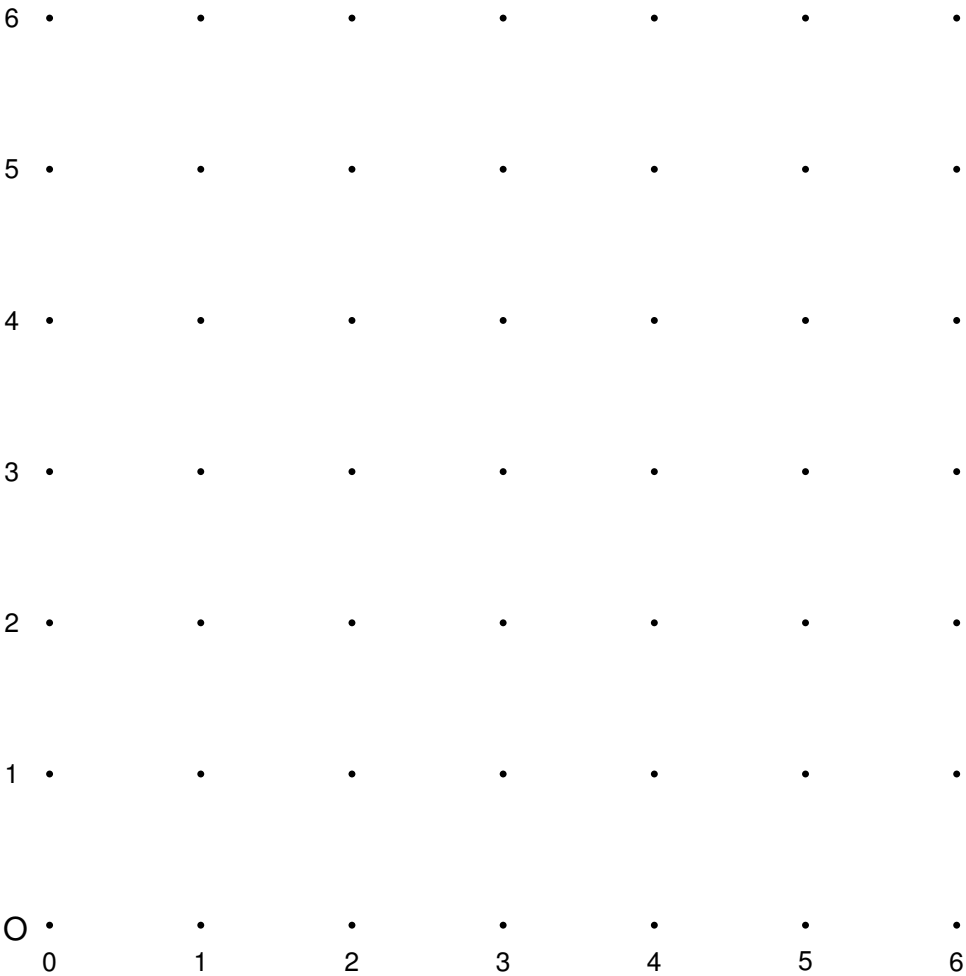

Problem 1: Which dots can you see from O? Circle every visible dot.

Problem 2: Which circled targets are hidden? Find the blocker nearest O for each hidden target.

Problem 3: Find every target with exactly one dot between it and O. Then find every target with exactly two.

Problem 4: Find a visible dot in each row above O and a row with only visible dots. Can you also find a hidden dot in every row?

Problem 5: Which first dot after O hides the most other dots? Find every first dot that ties for the most.
