

Keep cords on the table. Move them without cutting or passing strands through each other. Use red (R), blue (B), and green (G).

process: follow X across the overpass to the next gap.

An arc runs between underpasses and continues through overpasses. A closed strand with no underpasses is one whole arc. Give each whole arc one color. At each crossing the colors must be all the same or all different.

Problem 1: Show an adult which strand goes over at each crossing above. Trace one whole arc on the next page without changing strands.

Problem 2: Find every valid coloring of this loop, using tracing paper for new tries. Record each coloring with color dots for whole arcs 1, 2, and 3.

Problem 3: Can you color this loop using more than one color while keeping one color on each whole arc?

Problem 4: Try each of the four adult-prepared closed cords in the tray. Can you move it into this plain loop shape without cutting or passing strands through one another?

Problem 5: Choose the missing colors so every crossing follows the rule. Can any question mark have two different answers?

Problem 6: Keep each end dot its shown color. Which color choices let you color both whole strands and obey both crossings?

A strand may stop at an end dot in this picture. Use tracing paper for each try.
