

One arrow moves to the center of the next small square. Right meets left at the same height; top meets bottom at the same place across. Keep moving in the arrow direction. Repeated copies continue beyond the page.

Problem 1: Start at H for each trip. Predict where it ends, then try it with your pawn.

Problem 2: Find different trips from H back to H using exactly three steps, then exactly six steps. Draw or replay as many as you can.

Problem 3: Replay each trip on these copies, starting at the original H. Mark the copy where each trip finishes.

	H			H			H	
	H			H			H	
				original				
	H			H			H	

Problem 4: Compare these two trips from H. Do they finish at the same place on the portal map and in the same copy on the repeated map?

Problem 5: Make a trip that visits another copy and finishes at the original H. Can you make one that visits both a copy above and a copy to the right?
