

Start with one red and one blue. Draw, return it, add one counter of that color, and mix. For random play, each counter has the same chance; for possible stories, choose the draws yourself.

Problem 1: Make every different bag you can reach after two draws. Which bags can come from two different draw stories?

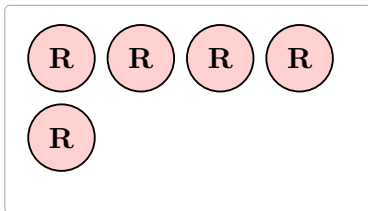

Problem 2: Which bags can you make after three draws? Make a story for each possible bag, and cross out any impossible bag.
