

Choose RR, RB, or BB with equal chances; keep that card hidden. For each clue, independently draw an equal-chance L/R ticket, show that face, then replace and mix. Hide the ticket, face marks, and turning. The guesser sees only the two color clues.

Fix the first choice at door 1. Choose the prize uniformly from doors 1, 2, 3. Independently draw ticket 2 or 3 with equal chances. Host A knows the prize and opens an unchosen empty door; use the ticket only if both are empty. Host B opens the ticket's door blindly; discard prize reveals. Hide prize placement and all tickets. The guesser sees only which empty door opens.

Draw a hidden counter uniformly from R1, R2, R3, B. The reporter sees its color, then independently draws H1, H2, or F with equal chances. H1 and H2 report the true color; F reports the other color. Hide the counter identity and ticket; show only the R/B report. Return and mix both draws each round.

Problem 3: A blue report arrives. Which hidden color is the better guess? Use every counter-and-report-ticket story. Replace the reporter's tickets with four equal-chance tickets, each honest or flipping. Can you make a blue report give both hidden colors equal chances?

counter	H1	H2	F
	_____	_____	_____
