

Problem 1: A dot is ON; empty is OFF. A move flips both ends of one line. Make each target or explain why it is impossible. What is the rule for which puzzles are possible?

A

B

C

D

E

F

Problem 2: Make each target or explain why it is impossible. What is the rule for which puzzles are possible on these networks?

Problem 3: Find every set of lines that solves each puzzle. Press each chosen line once. How are the solutions related?

A

B

C

D

Problem 4: Make each target in the fewest possible moves.

A

B

C

D

E

F

Problem 5: Start all OFF. Draw a solvable target on each ring that needs as many moves as possible. What is the record for a ring of any size?

Problem 6: Find every set of lines that solves each puzzle. Press each chosen line once. What is the rule for how many solutions a puzzle has on these networks?

A

B

C

D
