

Hop around the ring

Name: _____

Date: _____

Put a counter on a shape. A hop goes to the next shape clockwise. Count the spaces **moved**, not the place where you start. Play with the ring first.

1. One hop per turn.

Start on circle. Keep taking one hop. Show when you first come home. How many turns did it take?

2. Two hops per turn.

Start on circle again. This time every turn is **two** hops. Where do you land? Can you ever land on triangle?

Circle the places you land, or tell an adult.

Try it with objects. Explain by pointing, talking, or drawing.

Find the hidden turn

3. A secret rule.

An adult moves every counter the same number of hops. You know circle becomes square. Where will triangle go? Use the ring on page 1.

Show where all four shapes go.

4. Undo the secret.

Can you find one turn that brings every counter back? Does the same turn undo itself? Test all four starting places.

My undo rule:

5. A different route.

Start on circle. Take three hops each turn. Do you visit the same places as the two-hop rule? Which rule visits every shape?

Go further: Make a ring with six picture cards. Among steps 1 through 5, which visit every card before returning home?

Try it with objects. Explain by pointing, talking, or drawing.
