

Cross every bridge once

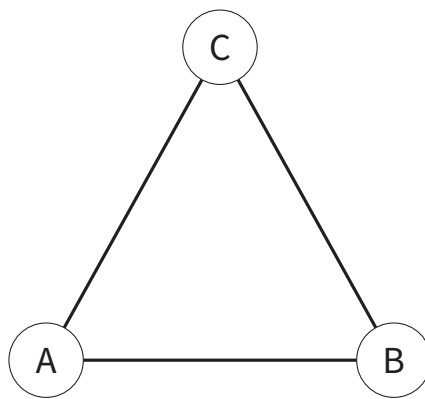

Name: _____

Date: _____

Dots are islands. Lines are bridges. Start on any island. Walk along every bridge **once**, without jumping. You may visit an island again. Put a counter on each bridge after using it.

1. Explore the island town.

Try a walk. Can you use every bridge and return to your starting island?

2. Add a little branch.

An adult draws one new bridge from A to a new island D. Can you still use every bridge once? Where can you start? Where must you finish?

Show your new map or tell an adult your route.

Try it with objects. Explain by pointing, talking, or drawing.

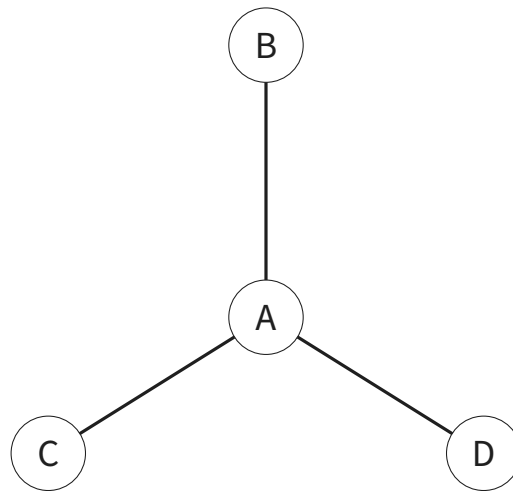

Why do dead ends matter?

Name: _____

Date: _____

3. Try this town.

Can one walk use every bridge once? Try more than one starting island.

Think with your finger: If you visit a leaf island in the middle of a walk, how can you leave without reusing its bridge?

4. Repair it.

Add **one** bridge between two leaf islands. Try your walk again. Did you need to start somewhere special?

Draw your repair and show a complete route.

Try it with objects. Explain by pointing, talking, or drawing.
