Town 4

Problem 1 continued. Which towns can you walk through using every street exactly once? Start wherever you choose.

Town 5

Town 6

Problem 1 continued. Which towns can you walk through using every street exactly once? Start wherever you choose.

Town 7

Town 8

Streets may be crossed either way. Pick up each street's counter as you cross. Start at the star. Before another try, put all counters back and return to the star.

Problem 2: Which streets can you cross first and still use every street exactly once? Mark those streets.

Town 1

Town 2

Problem 2 continued. Which streets can you cross first and still use every street exactly once? Mark those streets.

Town 4

A window reads neighboring buttons from left to right. In this two-button example, the window slides one place each time.

Problem 3: Make a row of 0 and 1 tiles containing all eight three-button passwords below. How few tiles can you use?

000

001

010

011

100

101

110

111

Read a circle clockwise. A window may cross the join. This two-button circle has three windows.

Problem 3 continued. Make a circle of 0 and 1 tiles containing all eight three-button passwords. What is the fewest tiles you can use?

000	001	010	011
100	101	110	111
