

Keep the dots fixed and in different places. Compare straight lengths to their centers. A place belongs to all its nearest dots. The frame shows part of a larger sheet.

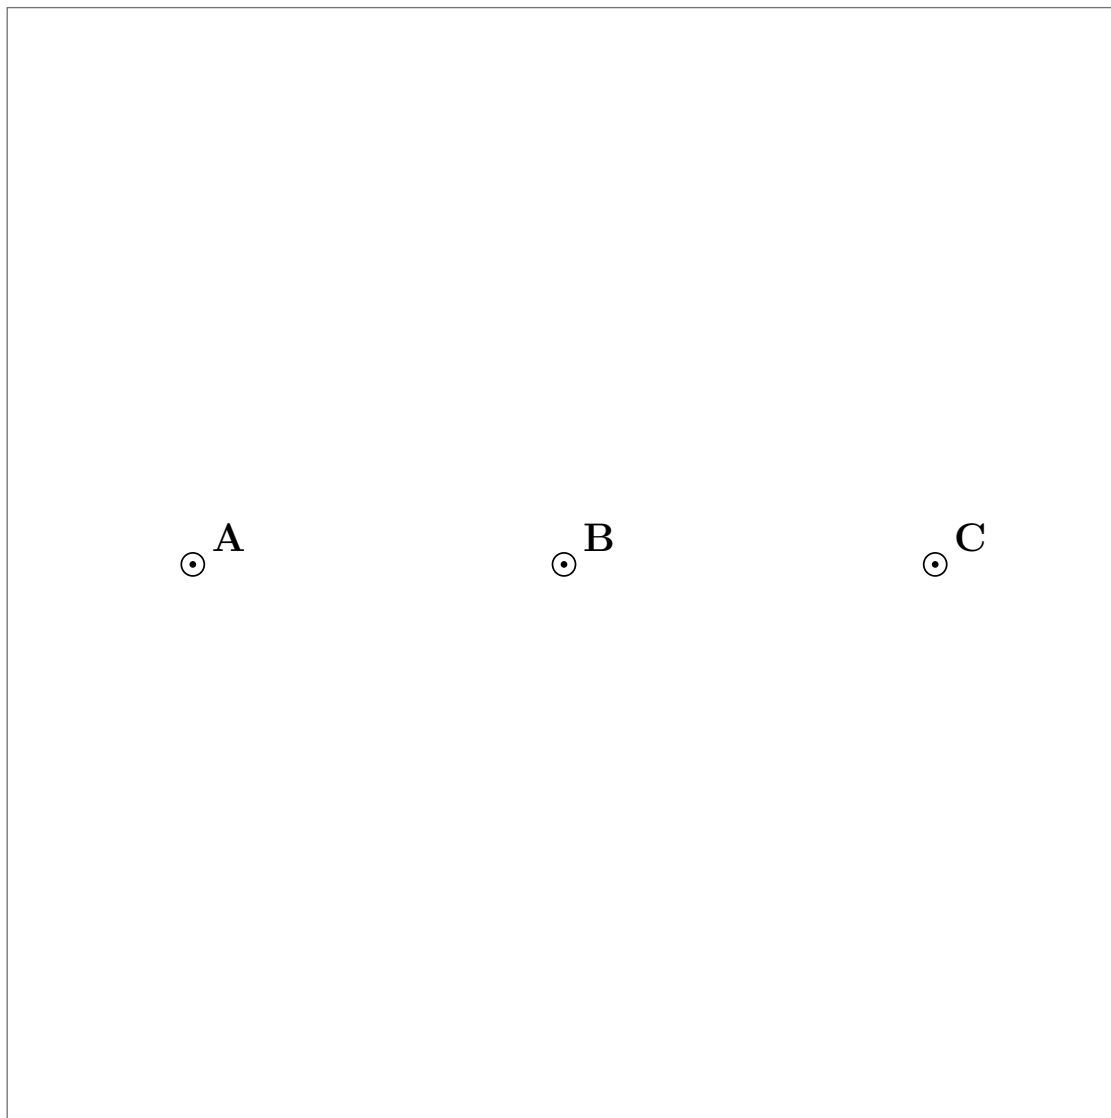

Problem 1: Write the nearest dot's letter beside each cross. Use both letters for a tie.

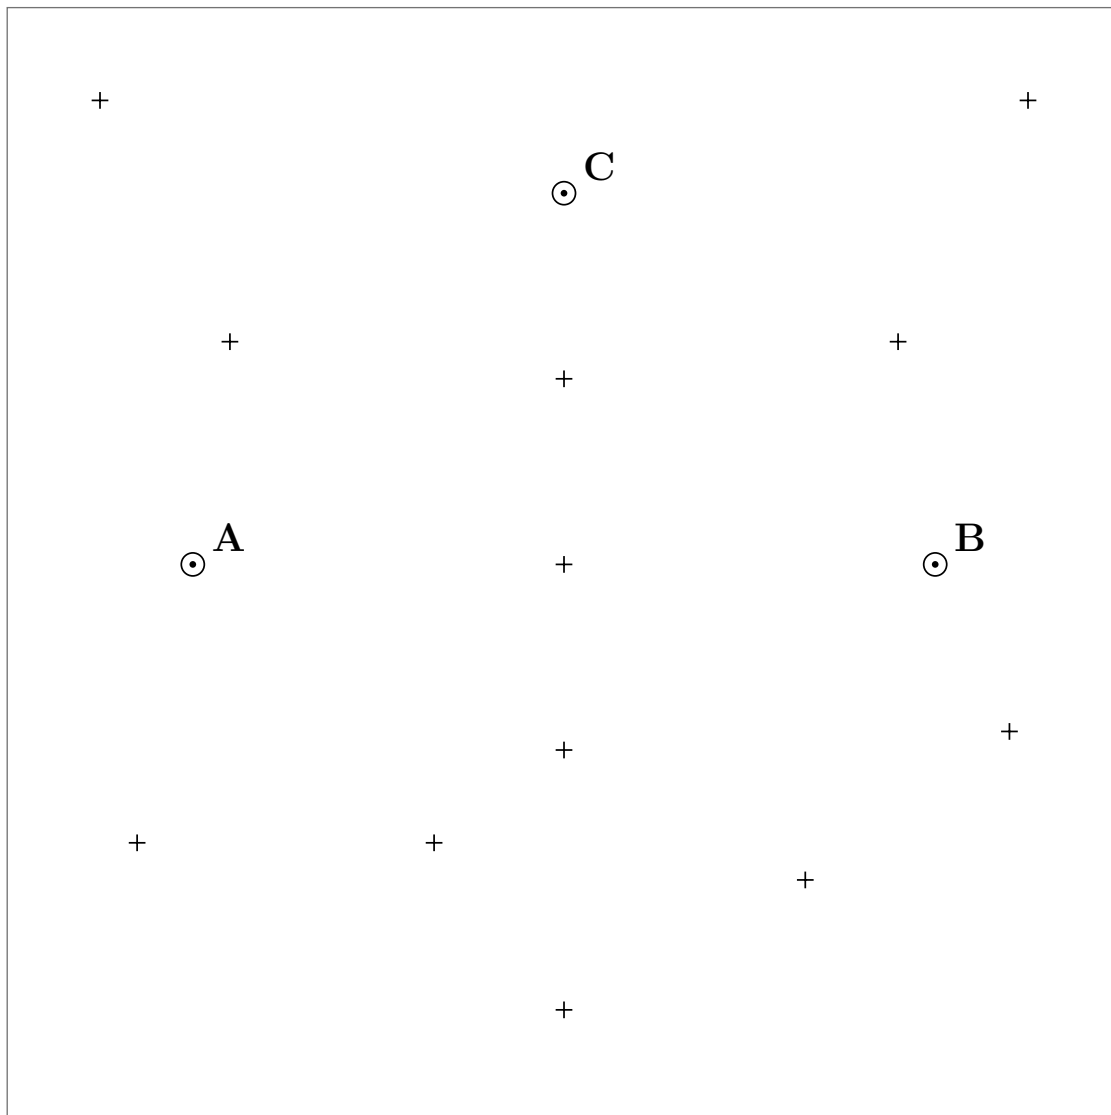

Problem 2: Divide the sheet between A and B so every place belongs to its nearest dot. Mark the places they share.

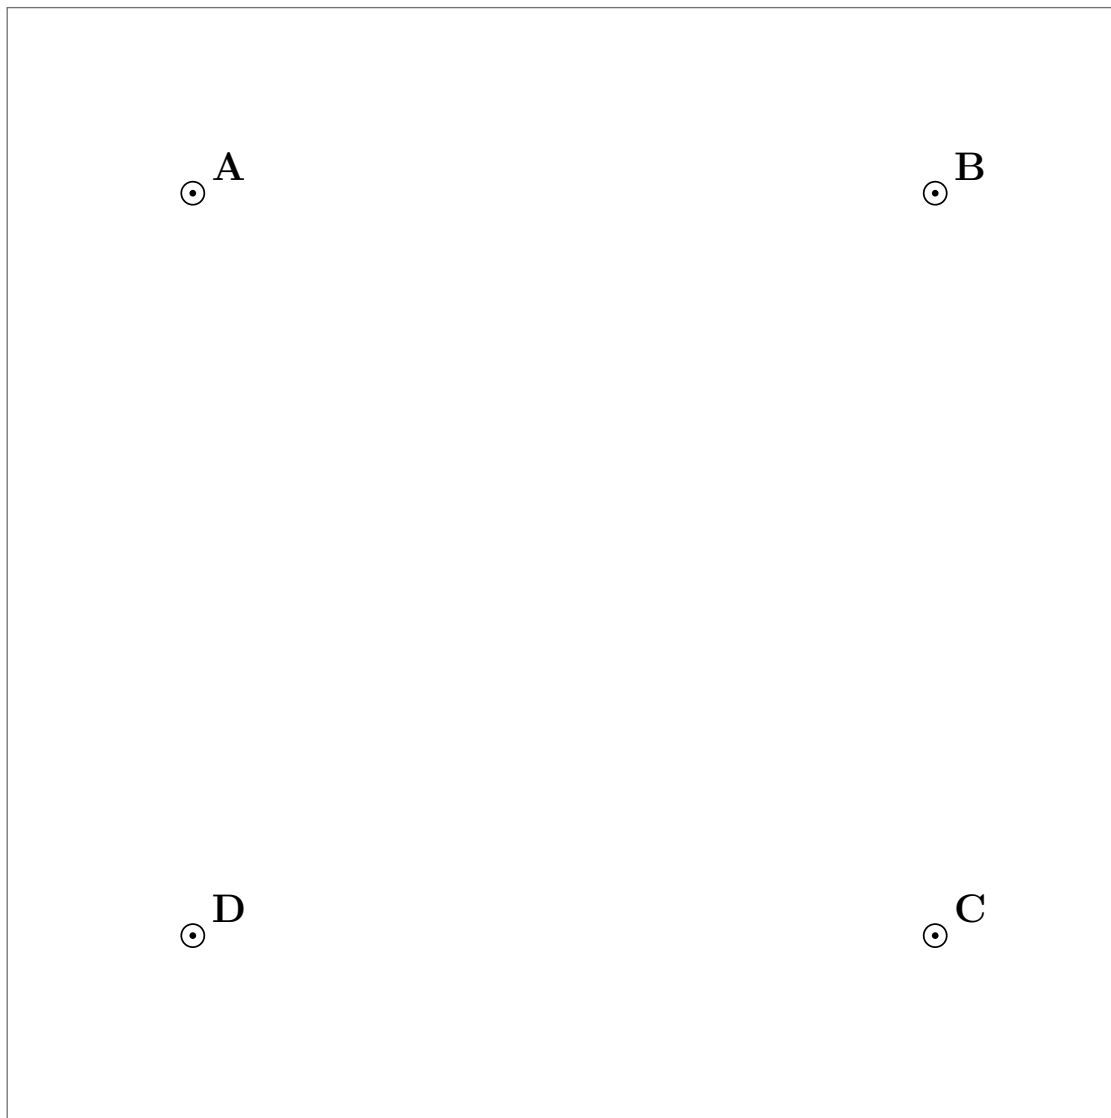

Problem 3: Divide the sheet among A, B, and C. Mark the places they share.

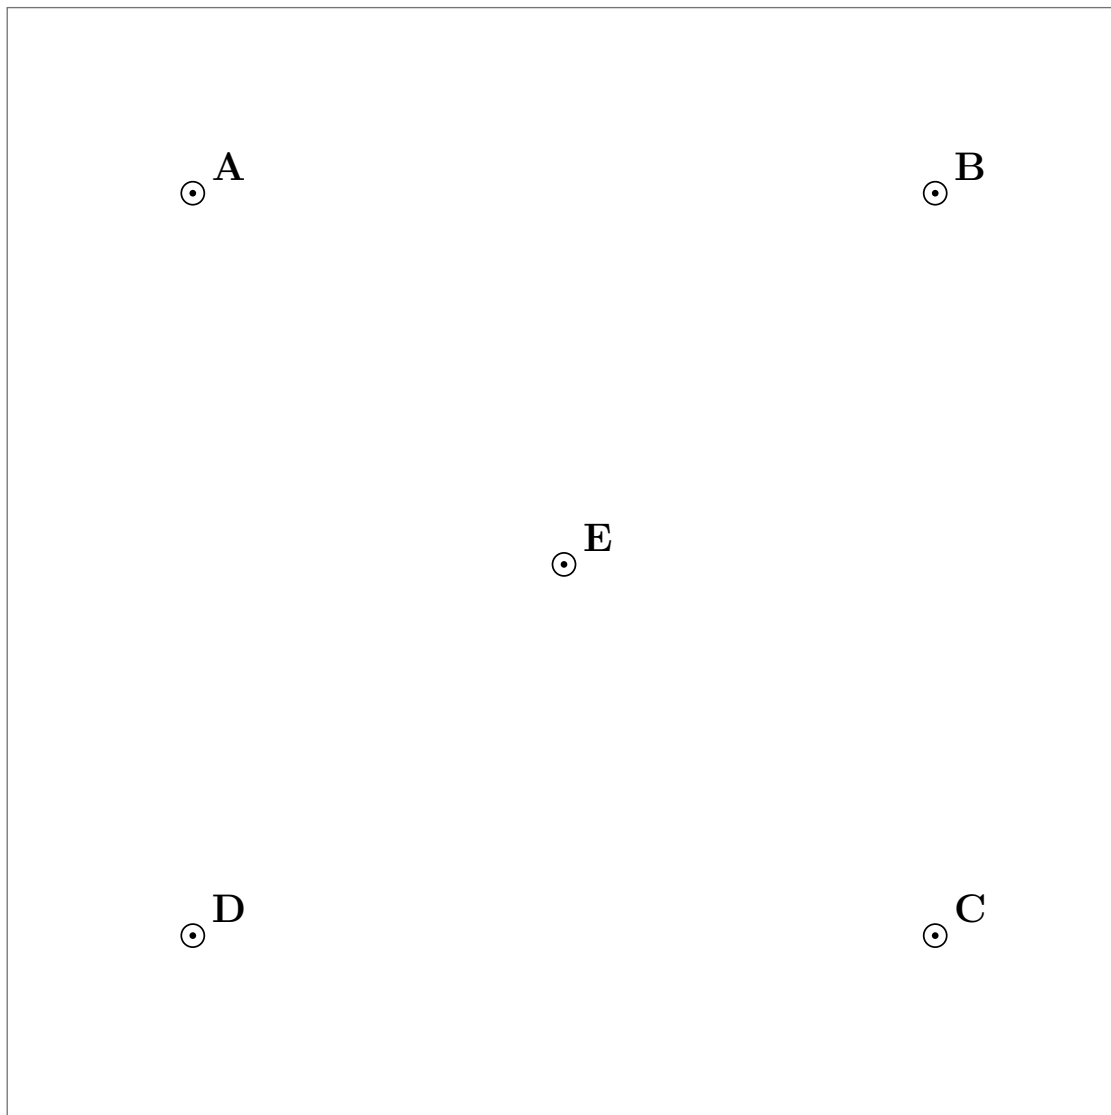

Problem 4: Write every nearest dot's letter beside each cross. Divide the sheet among A, B, and C.

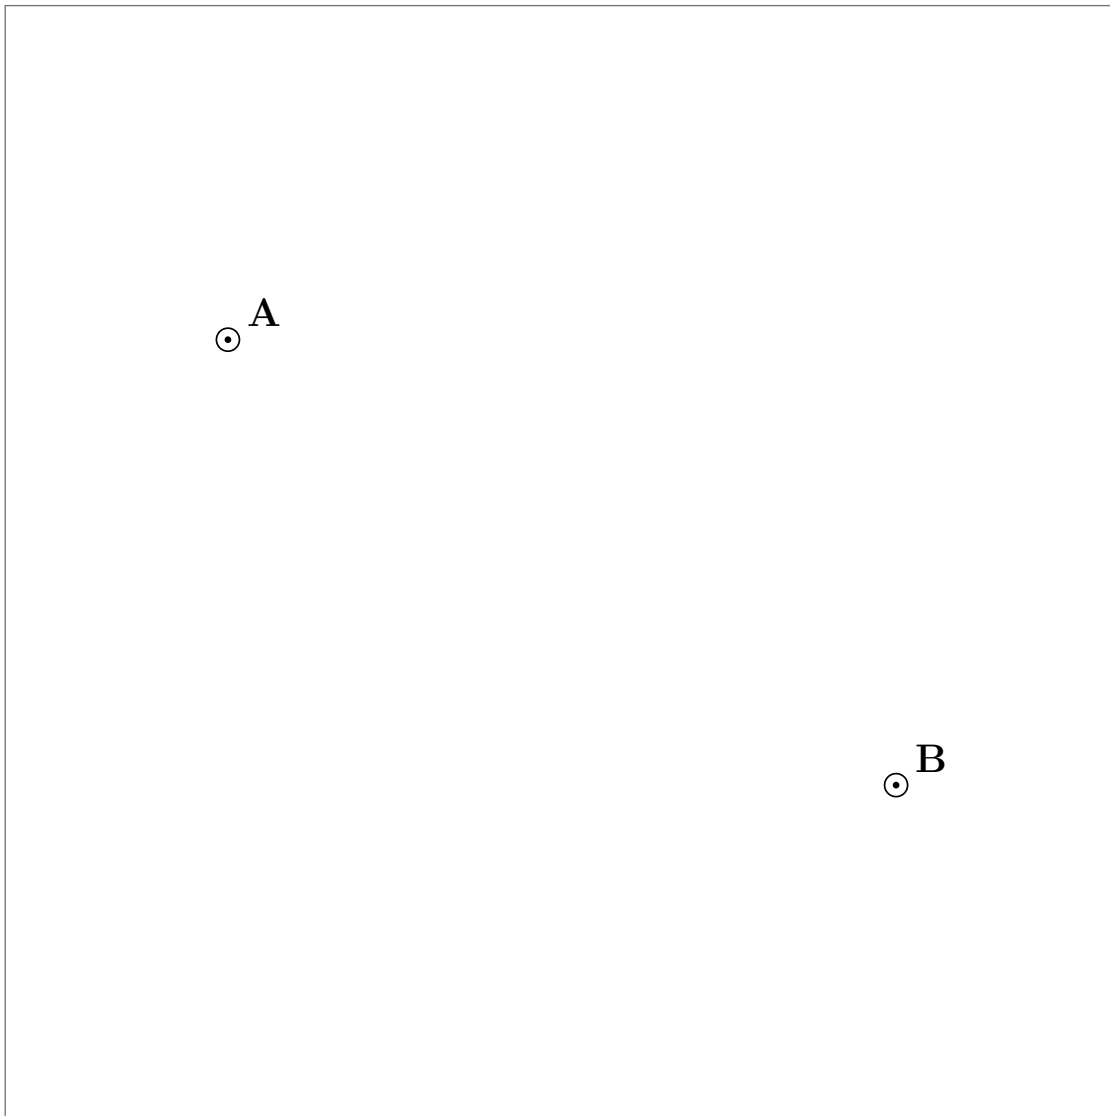

Problem 5: Divide the sheet among these four dots. Can one place belong to all four?

Problem 6: E has joined the four dots. Divide the sheet among all five dots.

Problem 7: Place one new dot so it takes places from both A and B. Divide the sheet among all three dots.

Problem 8: Put B and C in the frame so A gets exactly the shaded strip inside the frame.
