

A card fits inside another when all its pictures are on the other card. The empty card fits inside every card. In a collection, no card may fit inside another. Use a card only once in a collection.

**Problem 1:** In each group, circle as many cards as you can without breaking the rule.

**Problem 2:** Find every collection of one or more cards from this deck.

---

**Problem 3:** Find as many different two-card collections as you can from this deck.

**Problem 4:** Make the biggest collection you can from this deck. Make a different collection just as big.

---

**Problem 5:** Use the same deck. Keep each group of cards below and add as many cards as you can.

**Problem 6:** For each deck, use all the cards to make as few rows as you can. Each card fits inside the next; a card can be alone.

Example of one nested row: the first card fits inside the next. This is not a whole-deck arrangement.

**Problem 7:** Can you choose four cards from this deck without breaking the rule? Show why or why not.

---

**Problem 8:** Set aside any one card from this deck. Can you still make a collection of three cards, whichever card you set aside?
