

Keep the target on the left. Each weight may go on either pan or stay off. Use each weight at most once. Equal totals balance.

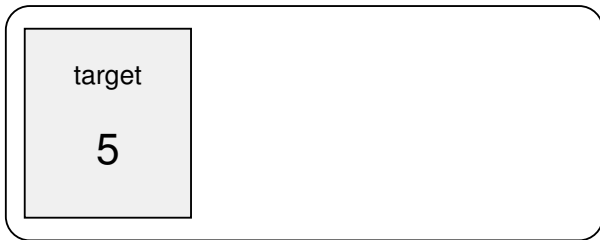

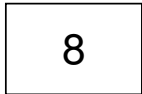

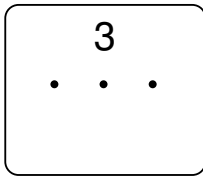

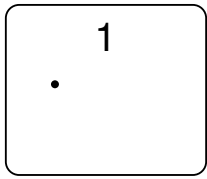

Target 3; weights 1 and 4

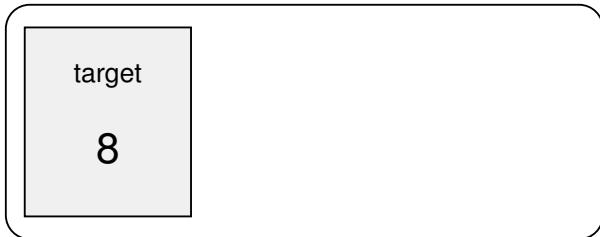

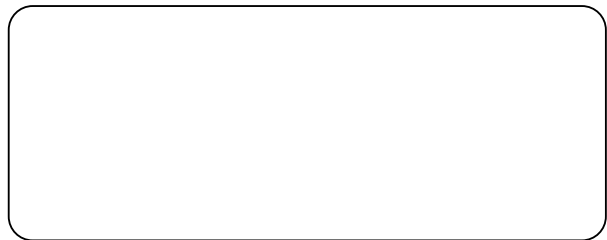

Problem 1: Compare the kits 1 and 2, 1 and 3, and 1 and 4. Which targets from 1 through 6 can each kit balance?

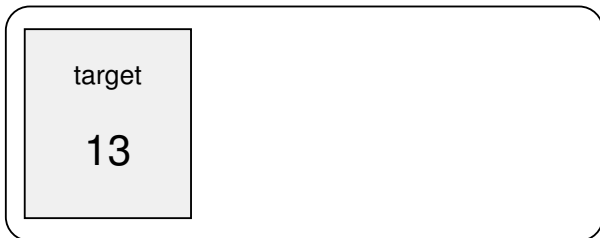

Problem 2: You have weights 1 and 3. Choose one more whole-number weight so that the kit balances every target from 1 through 13. Test your choice.

=

Problem 3: Compare these kits: 1, 3, 8; 1, 3, 9; 1, 3, 10. For each, find the first target it cannot balance.

1, 3, 8

1, 3, 9

1, 3, 10

Problem 4: Use weights 1, 3 and 8 to balance 4 in every possible way. Then find every way to balance 4 with 1, 3 and 9.

1, 3, 8

target 4	=	
---	---	--

target 4	=	
---	---	--

1, 3, 9

target 4	=	
---	---	--

Problem 5: Could a different three-weight kit balance every target from 1 through 14? Find one or explain why there cannot be one.

Problem 6: Choose a fourth weight to add to 1, 3 and 9. Make the longest possible unbroken run of targets starting at 1, and explain why your kit reaches all of them.
