

Fill every spot. Only counter kinds and spots count; the direction of a symbol does not. Keep the original still. Turn or turn over its tracing copy until all spots line up. A whole turn does not count.

**Problem 1:** Make different patterns on this ring with two kinds of counter. Let your partner find turns or flips that match.

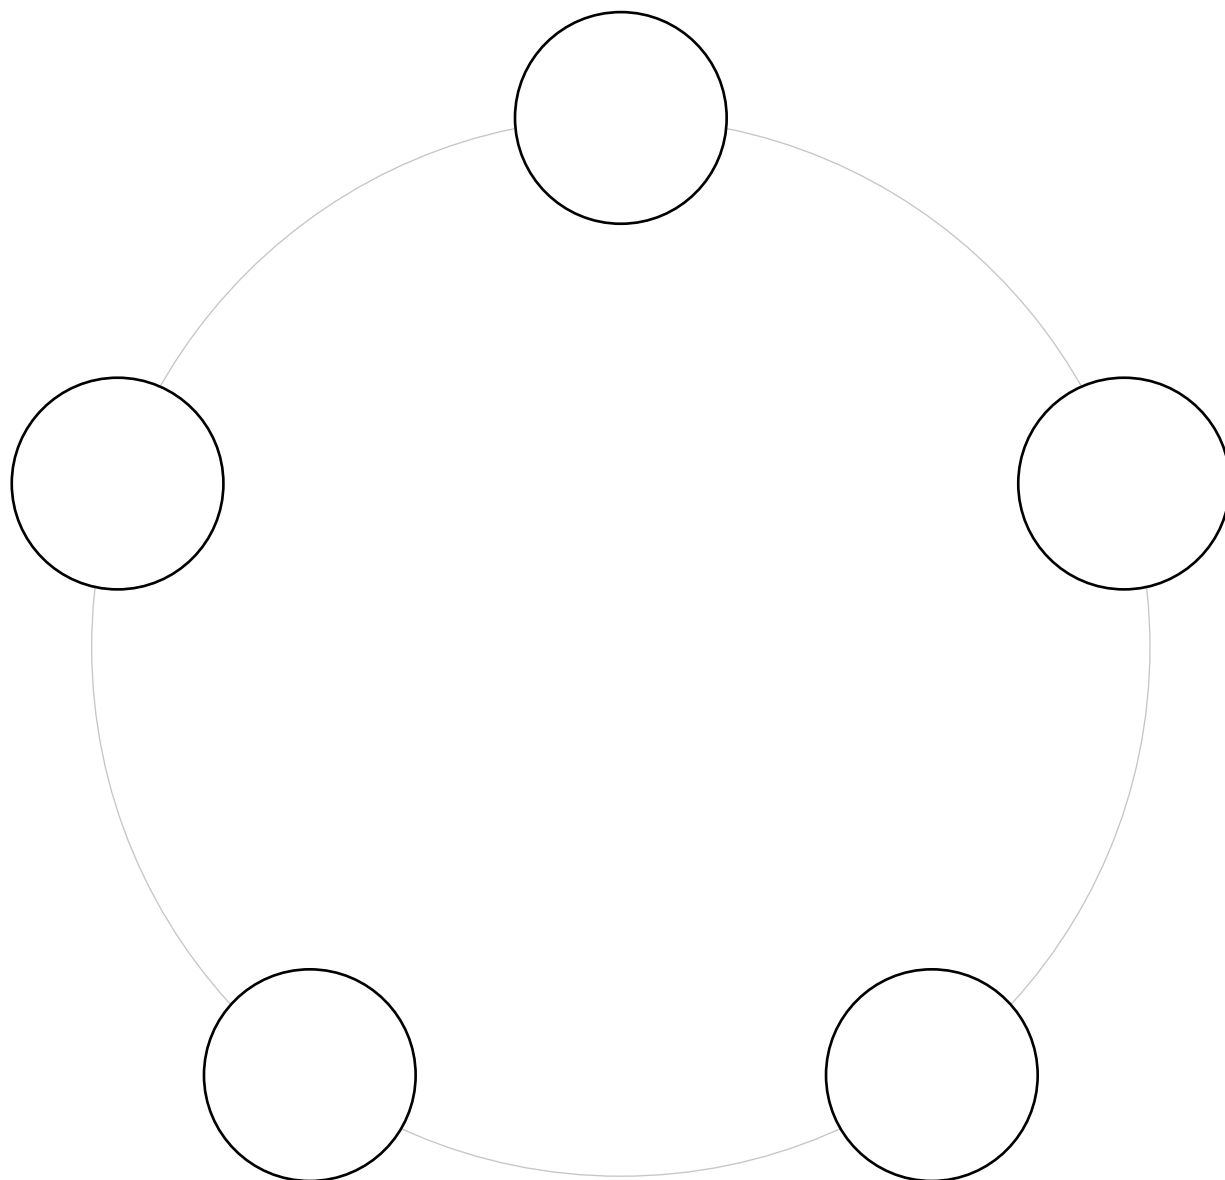

**Problem 2:** Make a pattern on this ring that no turn or flip can hide. How few kinds of counter can you use?

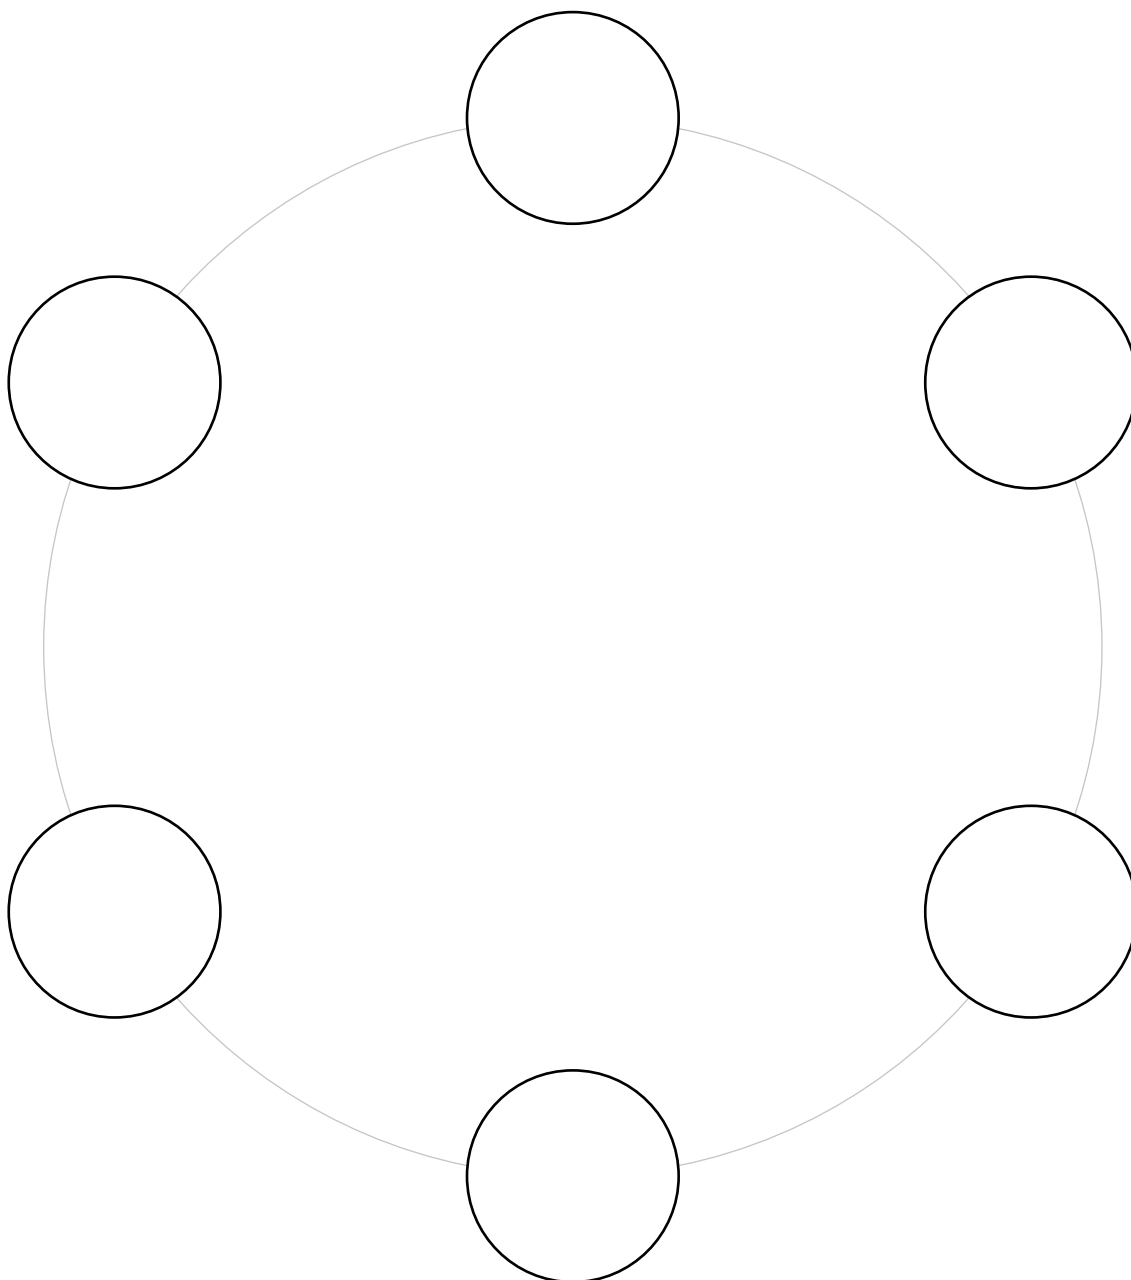

**Problem 3:** Change just one counter in different ways. Find changes that allow a matching turn or flip and changes that do not.

**Problem 4:** Can two kinds of counter stop every turn and flip on this ring?  
Try three kinds too.

**Problem 5:** Make a pattern with two kinds of counter that no turn or flip can hide. Let your partner test it.

**Problem 6:** Build two two-kind patterns that no turn or flip can hide and that cannot match each other. Keep each on its own tracing copy.
