

Print at actual size, 100%. Every face edge is 30 mm. Cut solid outside lines; fold dashed lines. Shaded tabs lie outside the faces. Join the two copies of each letter, with the shaded tab inside. Small blue corner numbers must meet matching numbers. Large numbers identify faces. Close every face.

30 mm check

Cube: six square faces

Tetrahedron: four equilateral triangle faces

The diagram illustrates a 3D hexagonal lattice structure, specifically a portion of a honeycomb lattice. It consists of 8 numbered nodes (1-8) and 12 labeled edges (A-I). The nodes are arranged in a 3D configuration, with some nodes appearing to be at different heights. The edges are labeled with letters A through I, and some edges are highlighted in red. The nodes are numbered as follows: 1 (top center), 2 (top right), 3 (bottom center), 4 (bottom left), 5 (top left), 6 (top right), 7 (bottom center), and 8 (bottom right). The edges are labeled with letters A through I, and some edges are highlighted in red. The nodes are numbered as follows: 1 (top center), 2 (top right), 3 (bottom center), 4 (bottom left), 5 (top left), 6 (top right), 7 (bottom center), and 8 (bottom right). The edges are labeled with letters A through I, and some edges are highlighted in red.

The diagram shows a 3D object composed of six faces and twelve edges. The faces are labeled A, B, C, D, E, and F. The edges are labeled with numbers 1 through 6. The object is a hexagonal prism with a rectangular face F attached to one of the hexagonal faces.

- Face A: A rectangular face on the right side of the object.
- Face B: A hexagonal face on the top left.
- Face C: A hexagonal face on the top right.
- Face D: A hexagonal face on the bottom left.
- Face E: A hexagonal face on the bottom right.
- Face F: A rectangular face on the far right, attached to face A.

The edges are labeled with numbers 1 through 6, indicating their connectivity to the faces. The edges are labeled as follows:

- Edge 1: Connects face A and face F.
- Edge 2: Connects face B and face C.
- Edge 3: Connects face B and face D.
- Edge 4: Connects face C and face E.
- Edge 5: Connects face D and face E.
- Edge 6: Connects face F and face A.

Every face edge is 30 mm. Cut solid outside lines, fold dashed lines, join matching letters and blue corner numbers. Tabs do not count as faces.

Square pyramid: one square and four equilateral triangles

Equilateral triangle faces for corner fans

Cut eight triangles. The black dot marks the corner to put at the center of a fan. Tape adjacent sides together; preserve each face's shape. These have no glue tabs.

Square faces for corner fans

Cut eight squares. Every edge is 30 mm. The black dot marks the corner to put at the center of a fan. These have no glue tabs.

Full-turn circles

Cut two circles, each 80 mm across. Lay fan corners around the center dot to see the missing part of a turn.
