One player controls C; the other controls R. C chooses a dot first, then R chooses. C takes the first turn. On your turn, stay or take one road to the next dot. Flip the turn tile even if you stay. Sharing a dot means immediate capture. Both counters stay visible. Swap jobs between games.

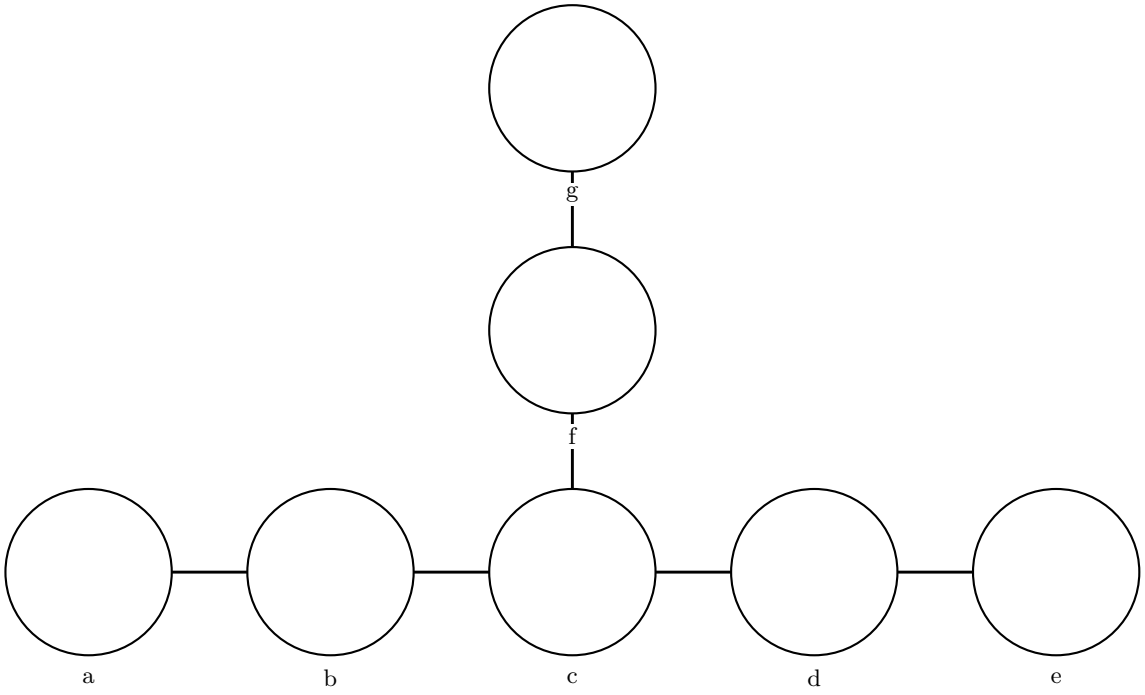

Problem 1: Play on both paths. Choose a starting dot for C that guarantees capture in the fewest C turns, even when R chooses its hardest starting dot and moves.

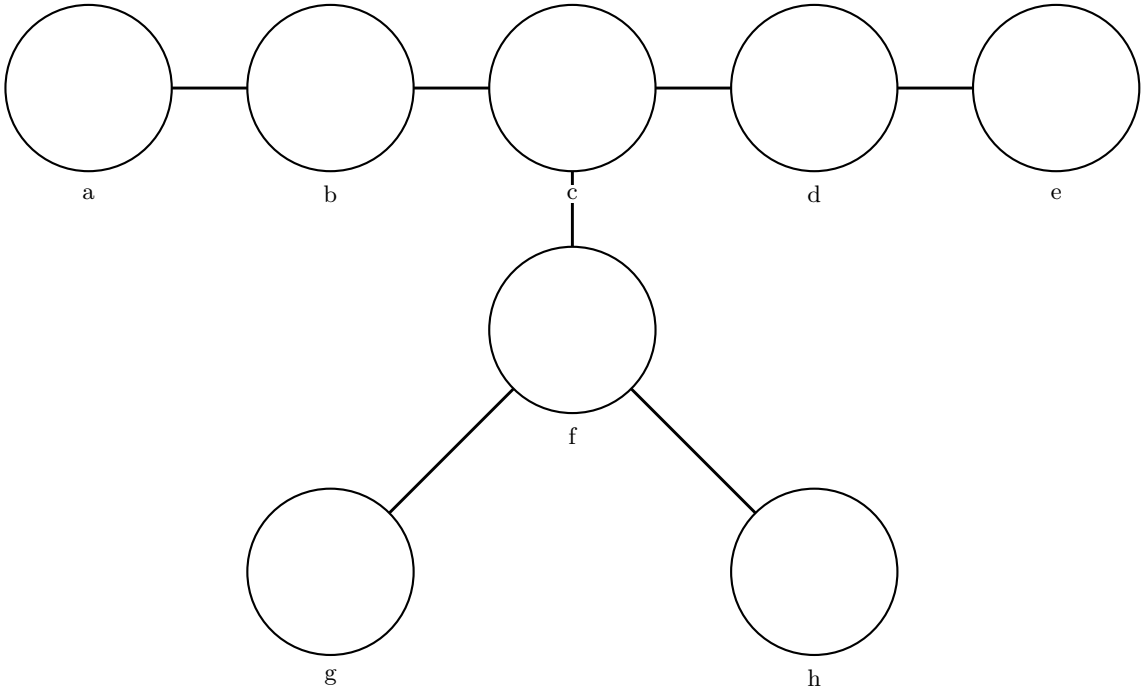

Problem 2: Find a cop plan that catches R on each map, wherever R starts and however R moves. Challenge your partner to escape.

T1

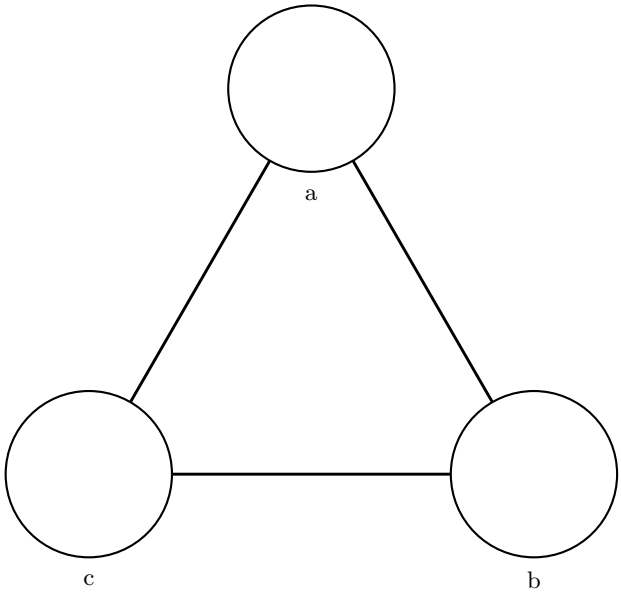

T2

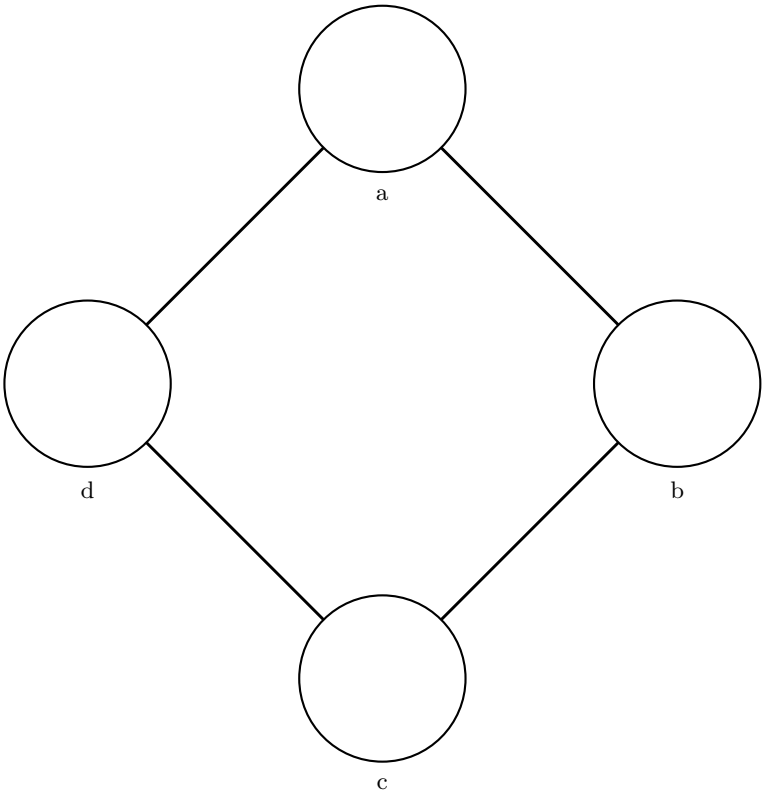

Problem 3: Play on both rings. On which can C always catch R? On which can R keep escaping forever? Find a plan that works against every reply.

R3

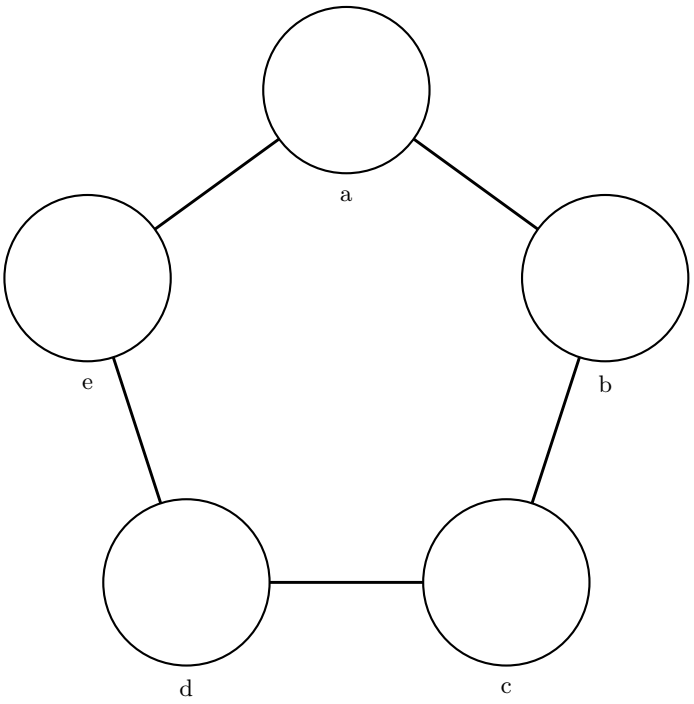

R4

Problem 4: Find an escape plan for R on each ring that keeps working however C moves. A long game is a test; your plan must work forever.
