Keep the voter cards unchanged. For each pair, each voter chooses the higher of the two letters on their card. Put that voter's token beside their choice. More votes wins.

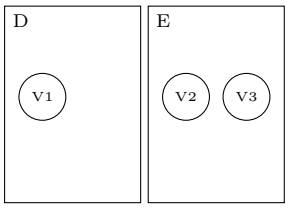

Pair on offer: D and E

V1	V2	V3
1st D	1st E	1st F
2nd F	2nd F	2nd E
3rd E	3rd D	3rd D

Chosen from D/E

V1 → D
V2 → E
V3 → E

All three votes

E wins, 2 to 1

Problem 1: Use these three cards. Is there a letter that wins against each of the other two?

V1	V2	V3
1st A	1st B	1st C
2nd B	2nd C	2nd A
3rd C	3rd A	3rd B

A knockout starts with two letters. The winner faces the waiting letter; that vote chooses the final winner. Put each loser in Out. Reset all three letters before a new knockout.

V1	
1st	D
2nd	F
3rd	E

V2	
1st	E
2nd	F
3rd	D

V3	
1st	F
2nd	E
3rd	D

The same cards stay visible in both rounds.

D vs E: E wins D goes to Out	⟶	E stays in F was waiting	⟶	E vs F: F wins E goes to Out

Problem 2: Keep the A/B/C cards from Problem 1. Choose a first pair and a waiting letter so that A wins the knockout. Can you make B win? Can you make C win?

	First pair:	Waiting:	Final pair:
Winner A			
Winner B			
Winner C			

Each ranking card must contain A, B and C once. Keep each set of cards unchanged while trying its knockouts.

Problem 3: Make three different cards so that the same letter wins every knockout. Make another set of three different cards where changing the waiting letter changes the winner.

Same winner every time
