Heights are whole numbers, including 0. Neighbors differ by at most 1. Black circles are fixed clues.

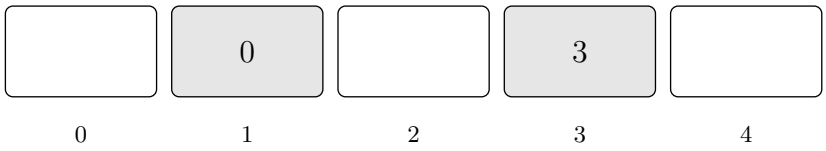

One marker in each column shows its tower height.

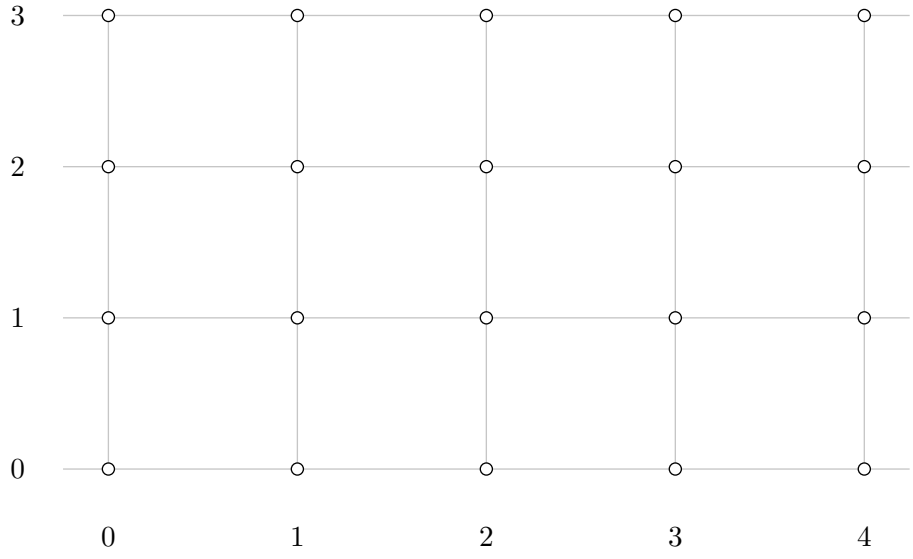

Problem 4: Decide which clue sets can be completed. Build the possible ones; explain what prevents the others.

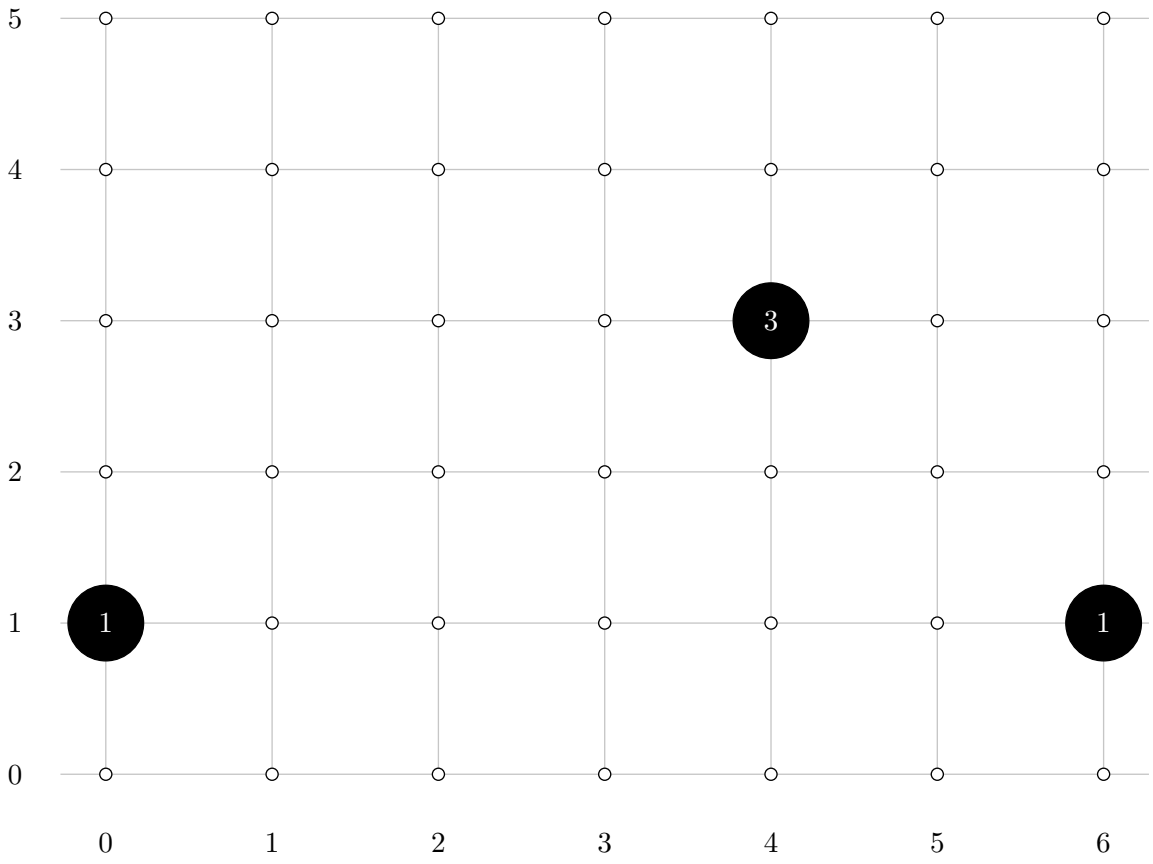

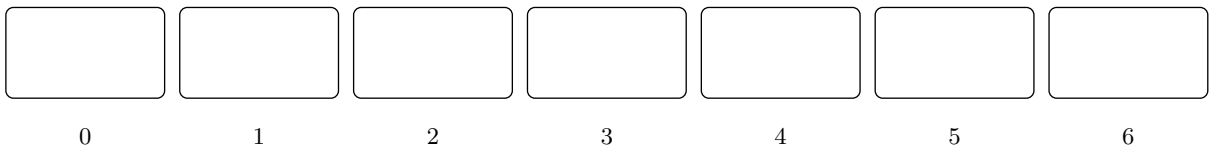

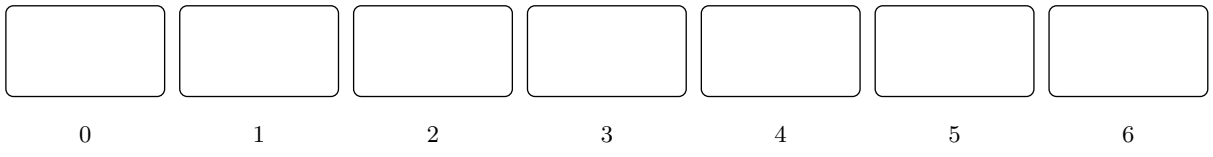

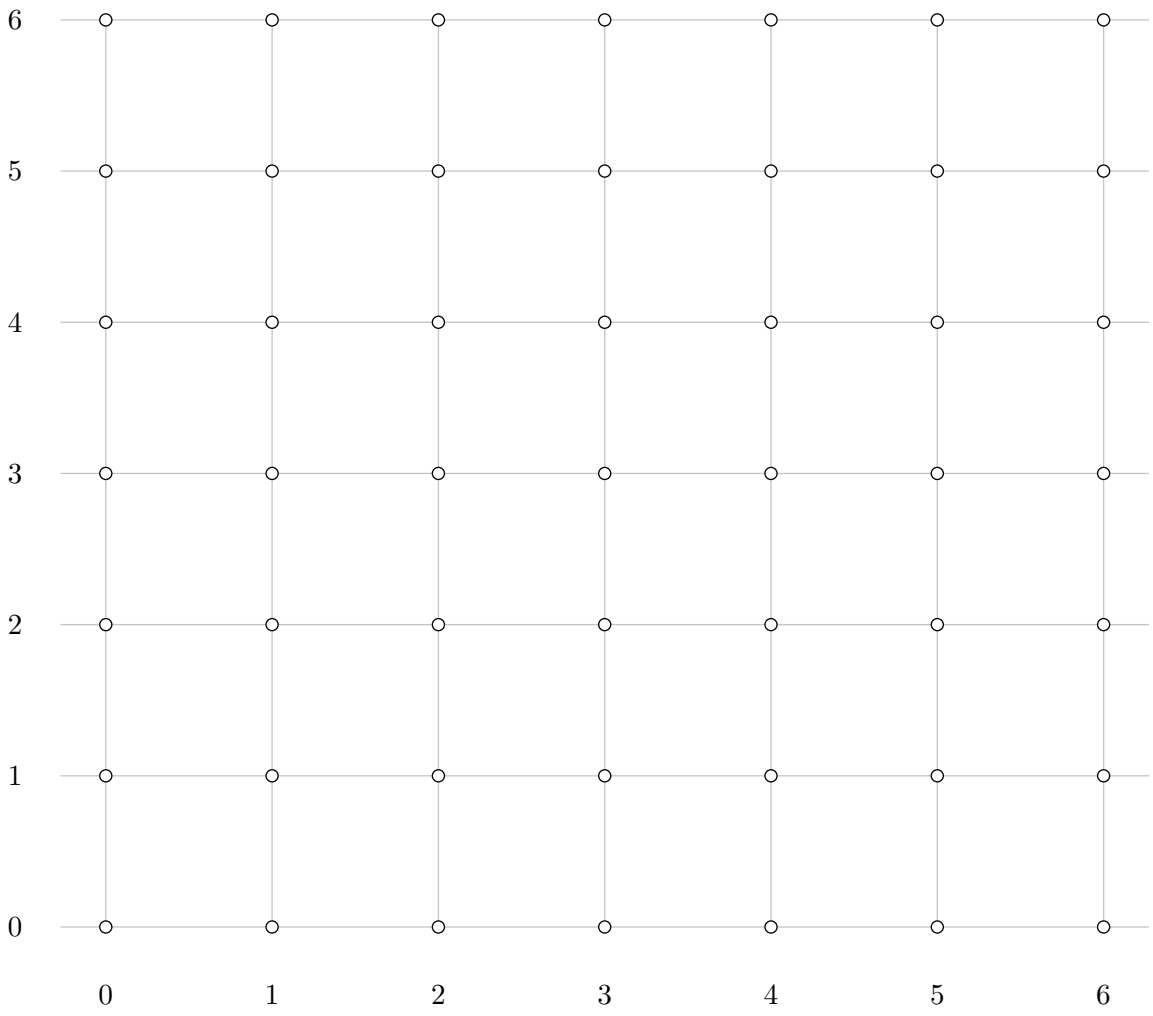

Problem 5: Make a landscape with the fewest blocks, then one with the most blocks. Keep all three clues.

Problem 6: Choose two clues on the seven-site board that force exactly one whole landscape. Then choose two clues that allow more than one. Let a partner solve both.

Problem 7: Two clues are 4 steps apart. One is height 1. Which heights for the other clue are possible? Explain a rule for clues any number of steps apart.
