Each instruction names a slot and a color. Set that slot to that color on both boards, even if it is already that color. Slots are 1, 2, 3 from left to right.

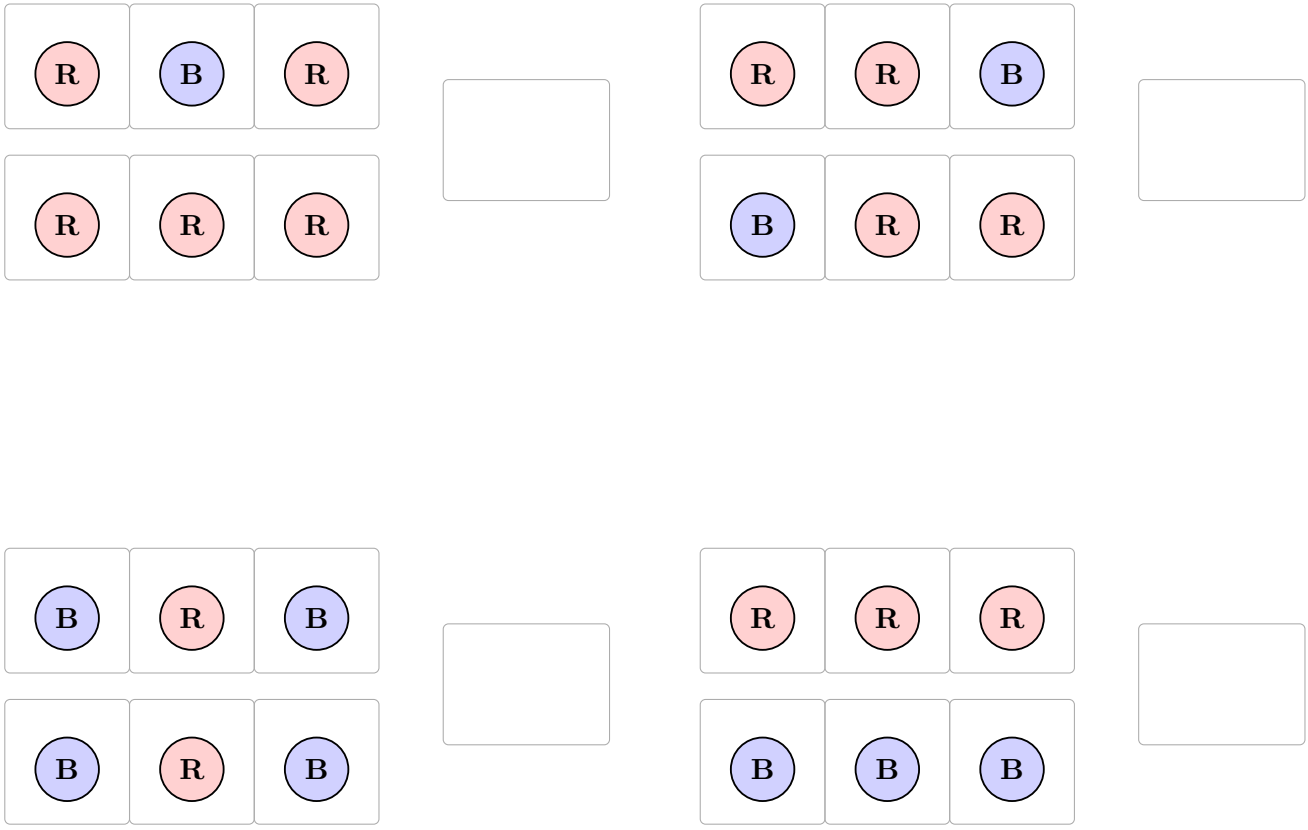

Problem 1: Make these boards match using as few instructions as you can. Can any other starts need more instructions?

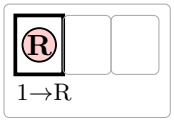

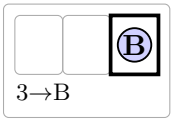

Problem 2: How few instructions can make each pair match? Try every pair.

Problem 4: Use these two instructions. Make two different starts that end matching, and a pair that ends different.

1→R

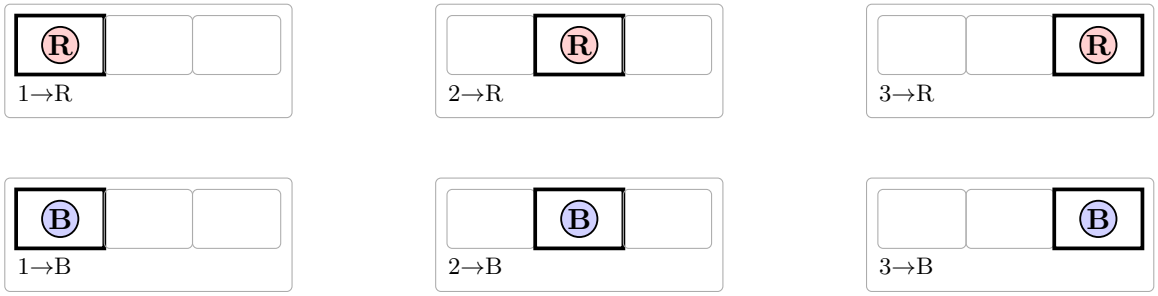

3→B

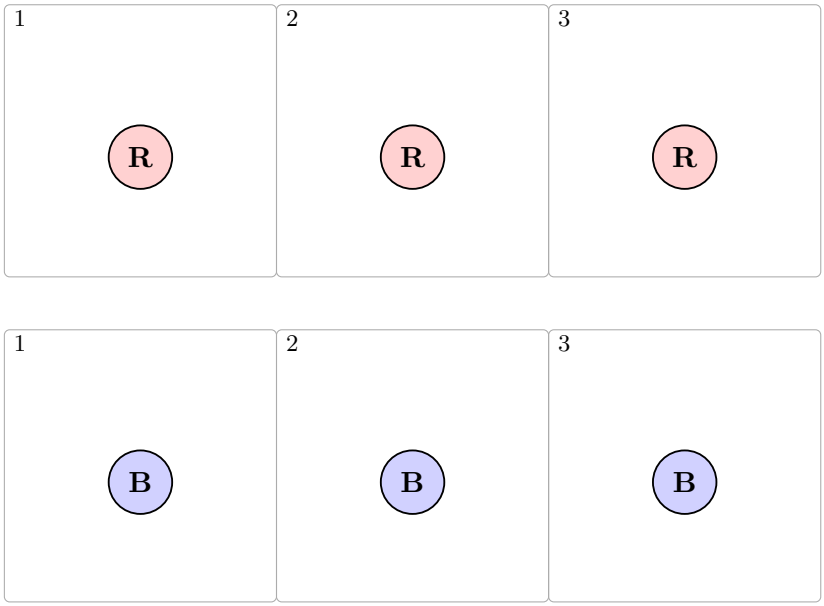

Mix these six cards in a cup. Draw one, use it on both boards, then put it back and mix.

Problem 6: Try six draws from these starts, then start again. Could matching take more than three draws?

Problem 7: Keep drawing after the boards match. Can any instruction make them different again?
