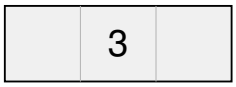
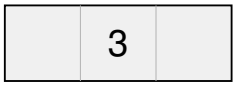
Problem 4: Can 3-rods and 4-rods build every length after 16? Can 3-rods and 5-rods build every length after 20? Explain how you know.





Problem 5: Use 4-rods and 7-rods. Find the last impossible length, and explain why there are no later gaps.

12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27
28							

Problem 6: Someone says every pair of rod lengths eventually has no more gaps. Is the claim true? Use rods 2, 3, 4, 5 and 7 to decide.
