A card fits inside another when all its pictures are on the other card. The empty card fits inside every card. In a collection, no card may fit inside another. Use a card only once in a collection.

Problem 5: Use the same deck. Keep each group of cards below and add as many cards as you can.

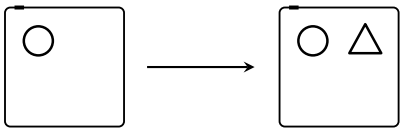

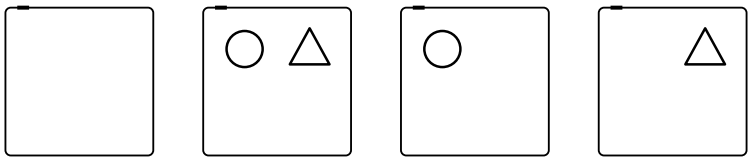

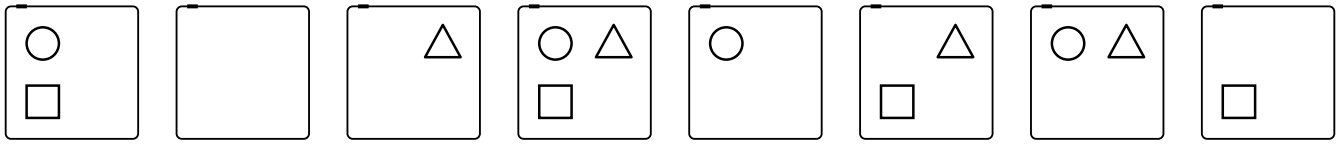

Problem 6: For each deck, use all the cards to make as few rows as you can. Each card fits inside the next; a card can be alone.

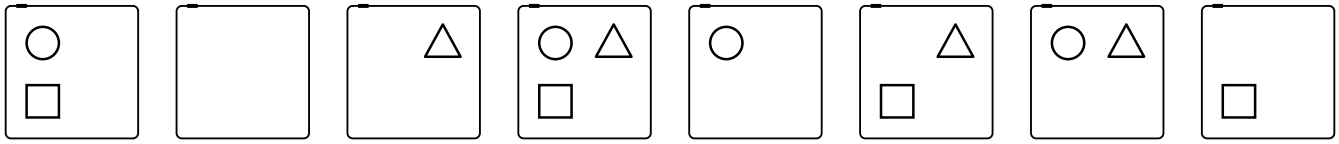

Example of one nested row: the first card fits inside the next. This is not a whole-deck arrangement.

Problem 7: Can you choose four cards from this deck without breaking the rule? Show why or why not.

Problem 8: Set aside any one card from this deck. Can you still make a collection of three cards, whichever card you set aside?
