Use whole-number heights, including 0. Follow each arrow: the gap between its two old heights becomes the new height at its tail. Make every new tower before changing any old tower. An all-zero start takes 0 moves.

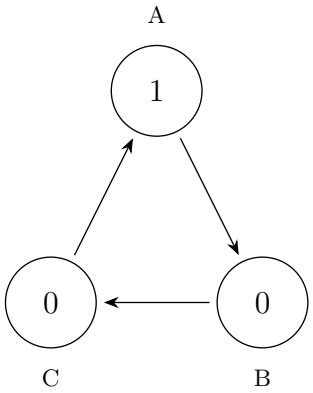

Edge A to B has gap 3, so new A is 3.

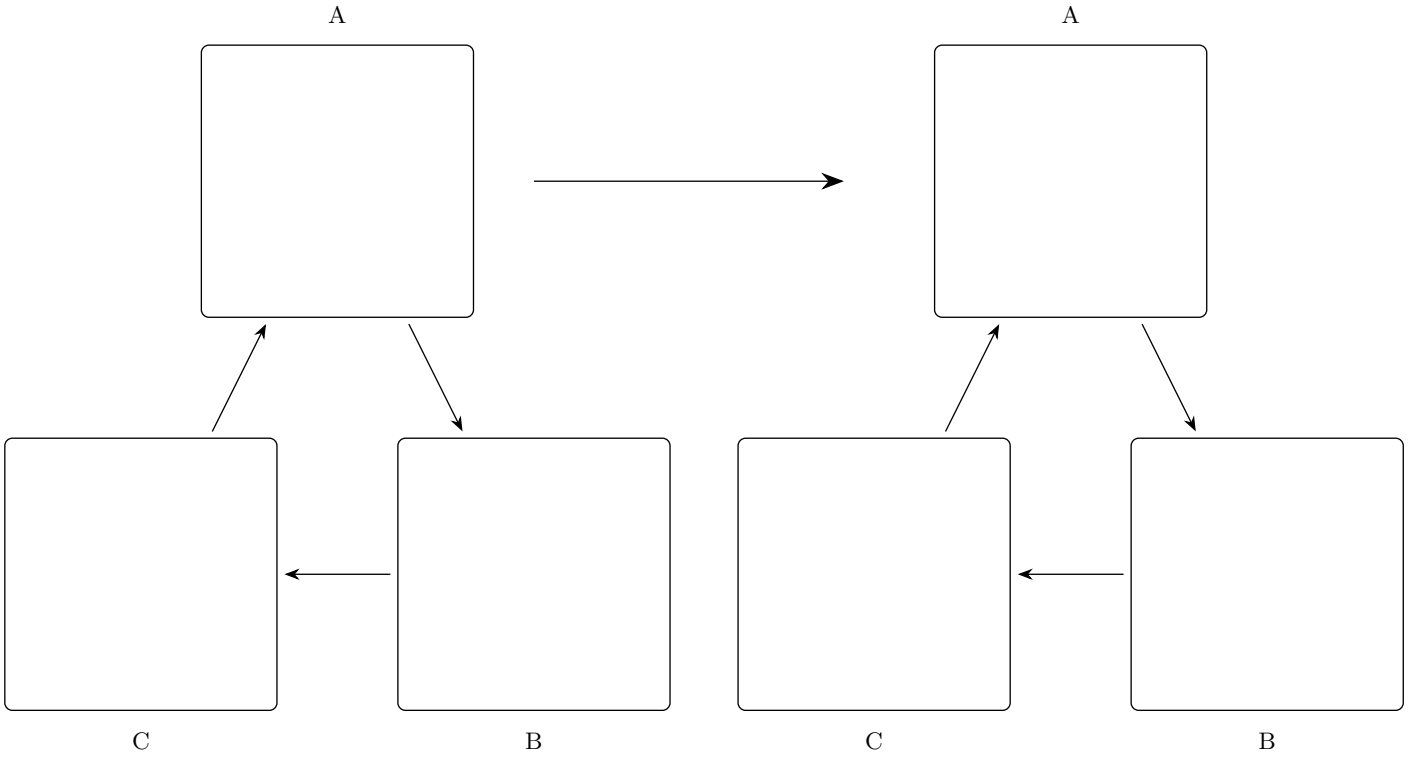

Problem 5: Try both starts with the same gap rule. Stop at all zeros or when the whole ring repeats.

old

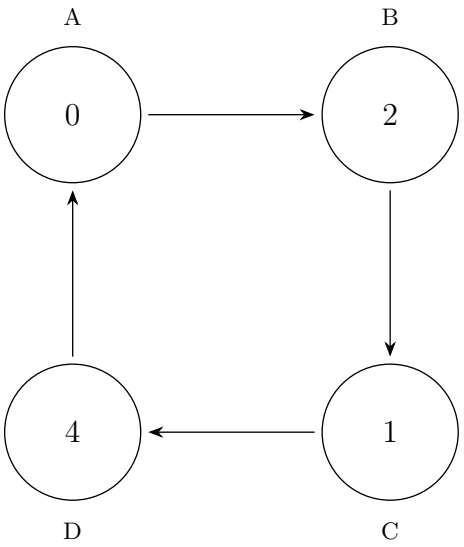

new

	A	B	C
1			
2			
3			

	A	B	C
4			
5			
6			

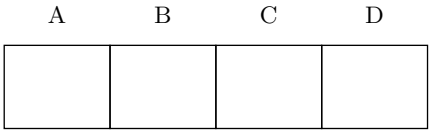

Problem 6: Put 0, 1, 2, and 4 around the four stations. Find an order that lasts longer than the other orders you try.

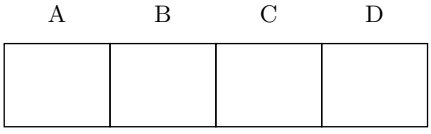

Moves to zero: _____

Moves to zero: _____

Moves to zero: _____
