For folds, use the marked front: M means mountain and V means valley. Fold every ray in the finished pattern fully flat. Keep the disk whole, with no other creases.

Problem 1: Use the seven loose wedges to make half-turns. Find as many different groups of letters as you can; use each wedge at most once in a group.

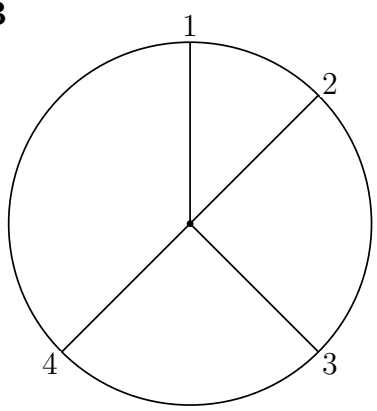

Problem 2: Which of these disks can close flat along every ray? Make one flat fold of each disk that can close and mark its rays M or V.

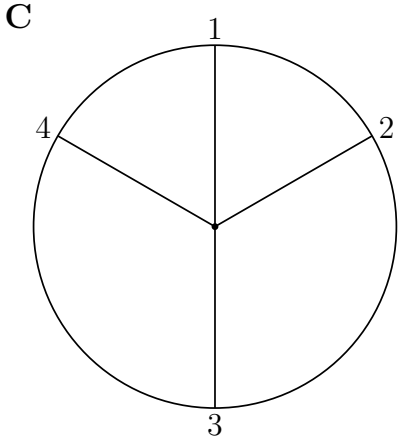

A

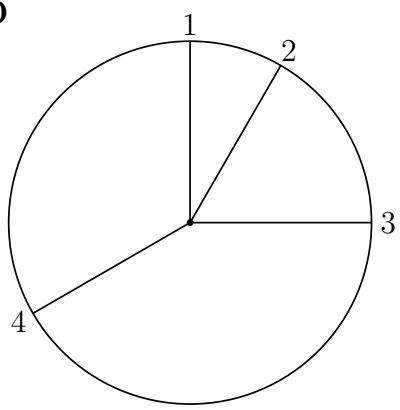

B

C

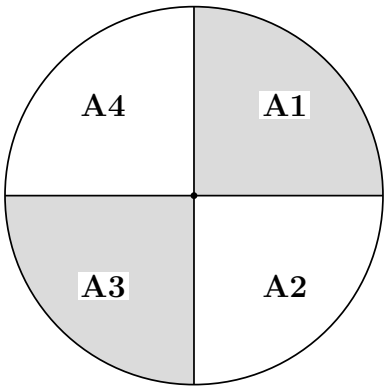

D

Problem 3: Use the 16 separate loose wedges cut to match A1–A4, B1–B4, C1–C4, and D1–D4. For each disk, can the shaded pair fill a half-turn exactly, and can the white pair? For any disk that could not close, explain why.

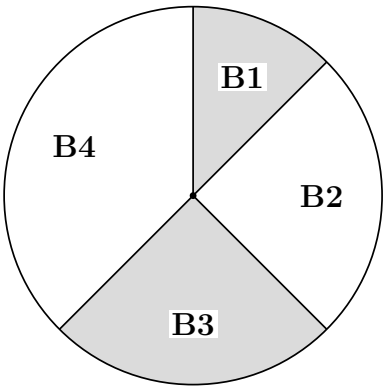

A

Shaded: _____

White: _____

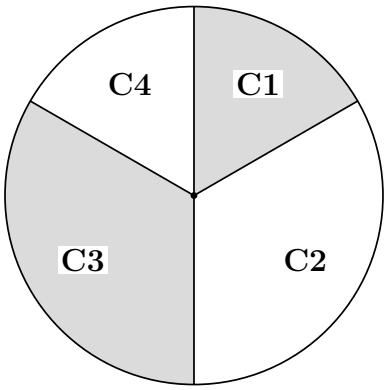

B

Shaded: _____

White: _____

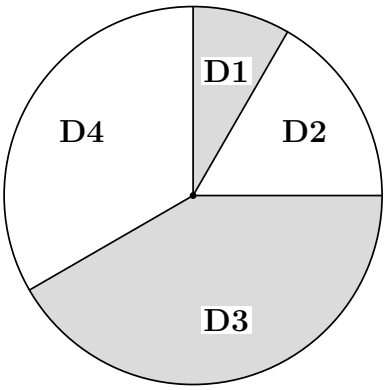

C

Shaded: _____

White: _____

D

Shaded: _____

White: _____
