Problem 4: Find as many mountain/valley labelings of the four-right-angle disk that can close flat as you can.

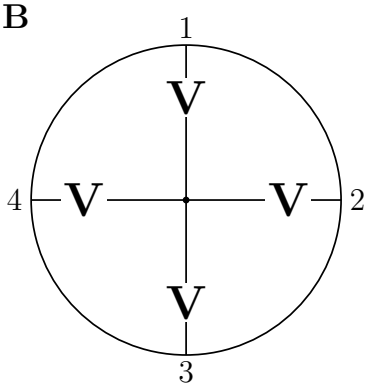

Problem 5: Can any of these labelings close flat? Explain why your folds from Problem 4 and the patterns you rule out account for every M/V labeling of the four-right-angle disk.

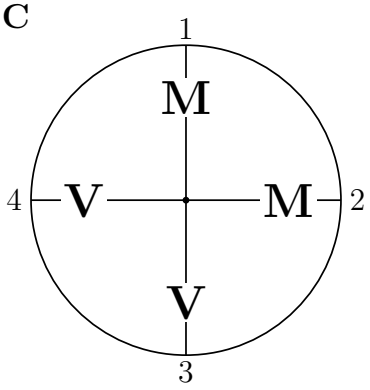

A

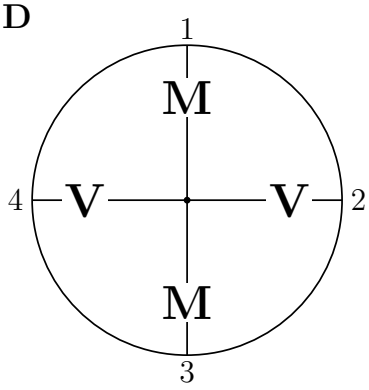

B

C

D

Problem 6: Use the angles $30°, 30°, 60°, 60°, 90°, 90°$ once each, clockwise around one center. How many different orders start with $30°$ and have alternating totals of $180°$? Explain why your count is complete. Swapping equal angles does not make a new order.
