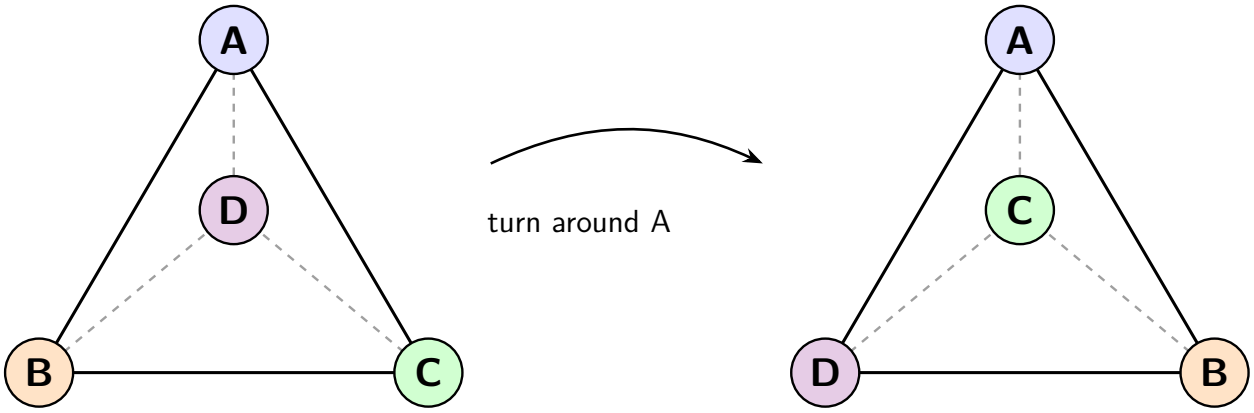
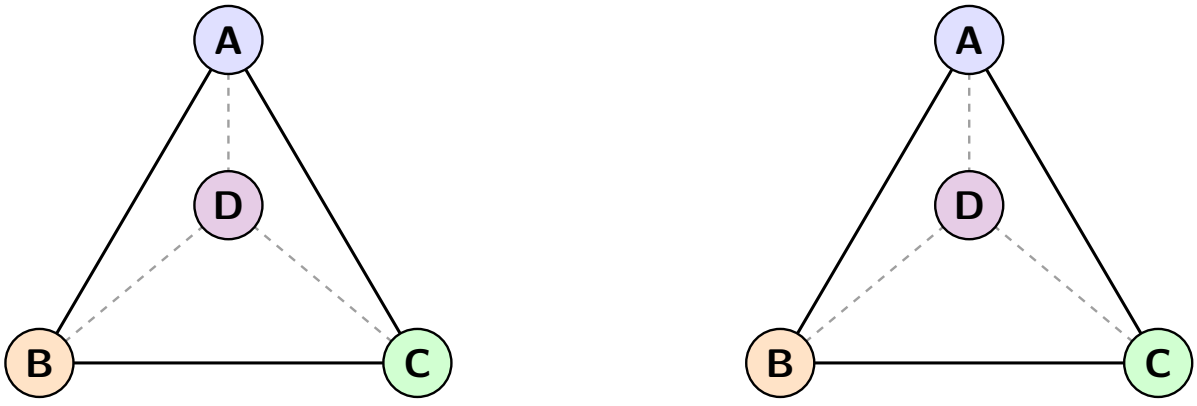
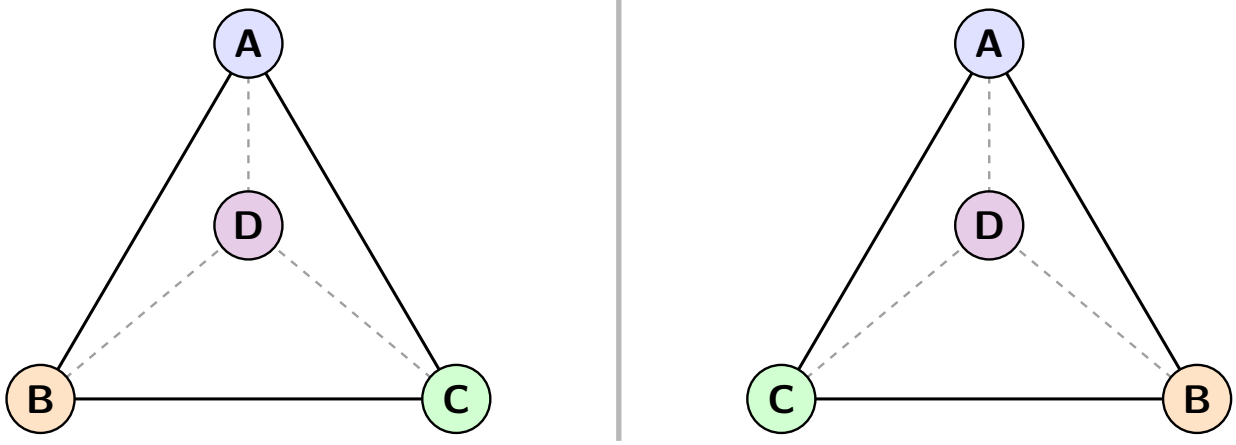
Use the rigid models. Move and turn them so same-letter corners match. Which way a letter points does not count. Keep the markers fixed unless a problem says to change them. Dashed edges pass behind the front face.

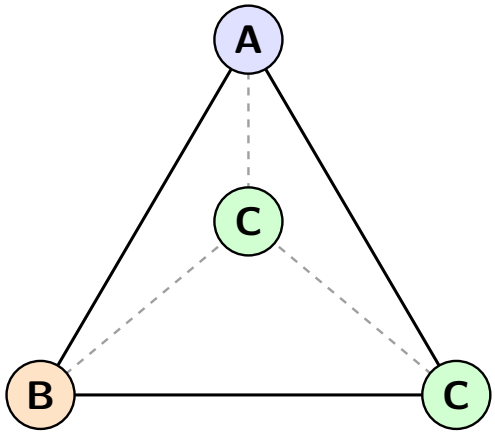


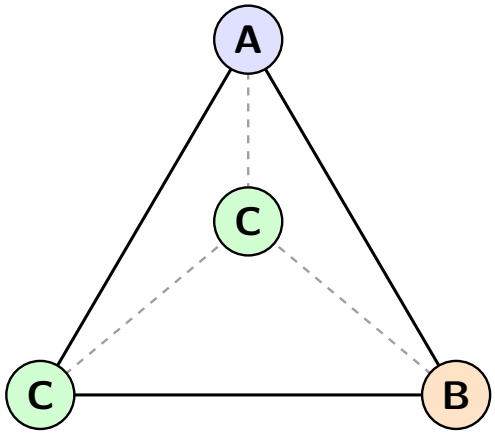
**Problem 1:** Make two models like the first picture. Hide and turn one, then let your partner turn it back to match.



**Problem 2:** Build this pair with your adult. Can you turn the models to match every letter?







**Problem 3:** Change D to C on both models from Problem 2. Can you turn them to match now?
