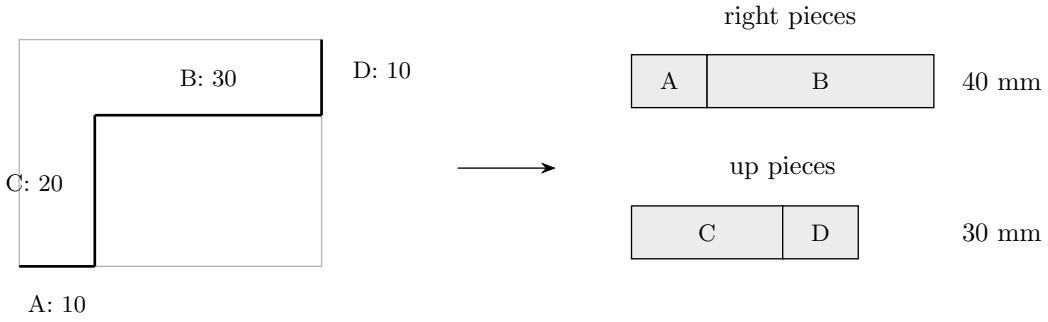
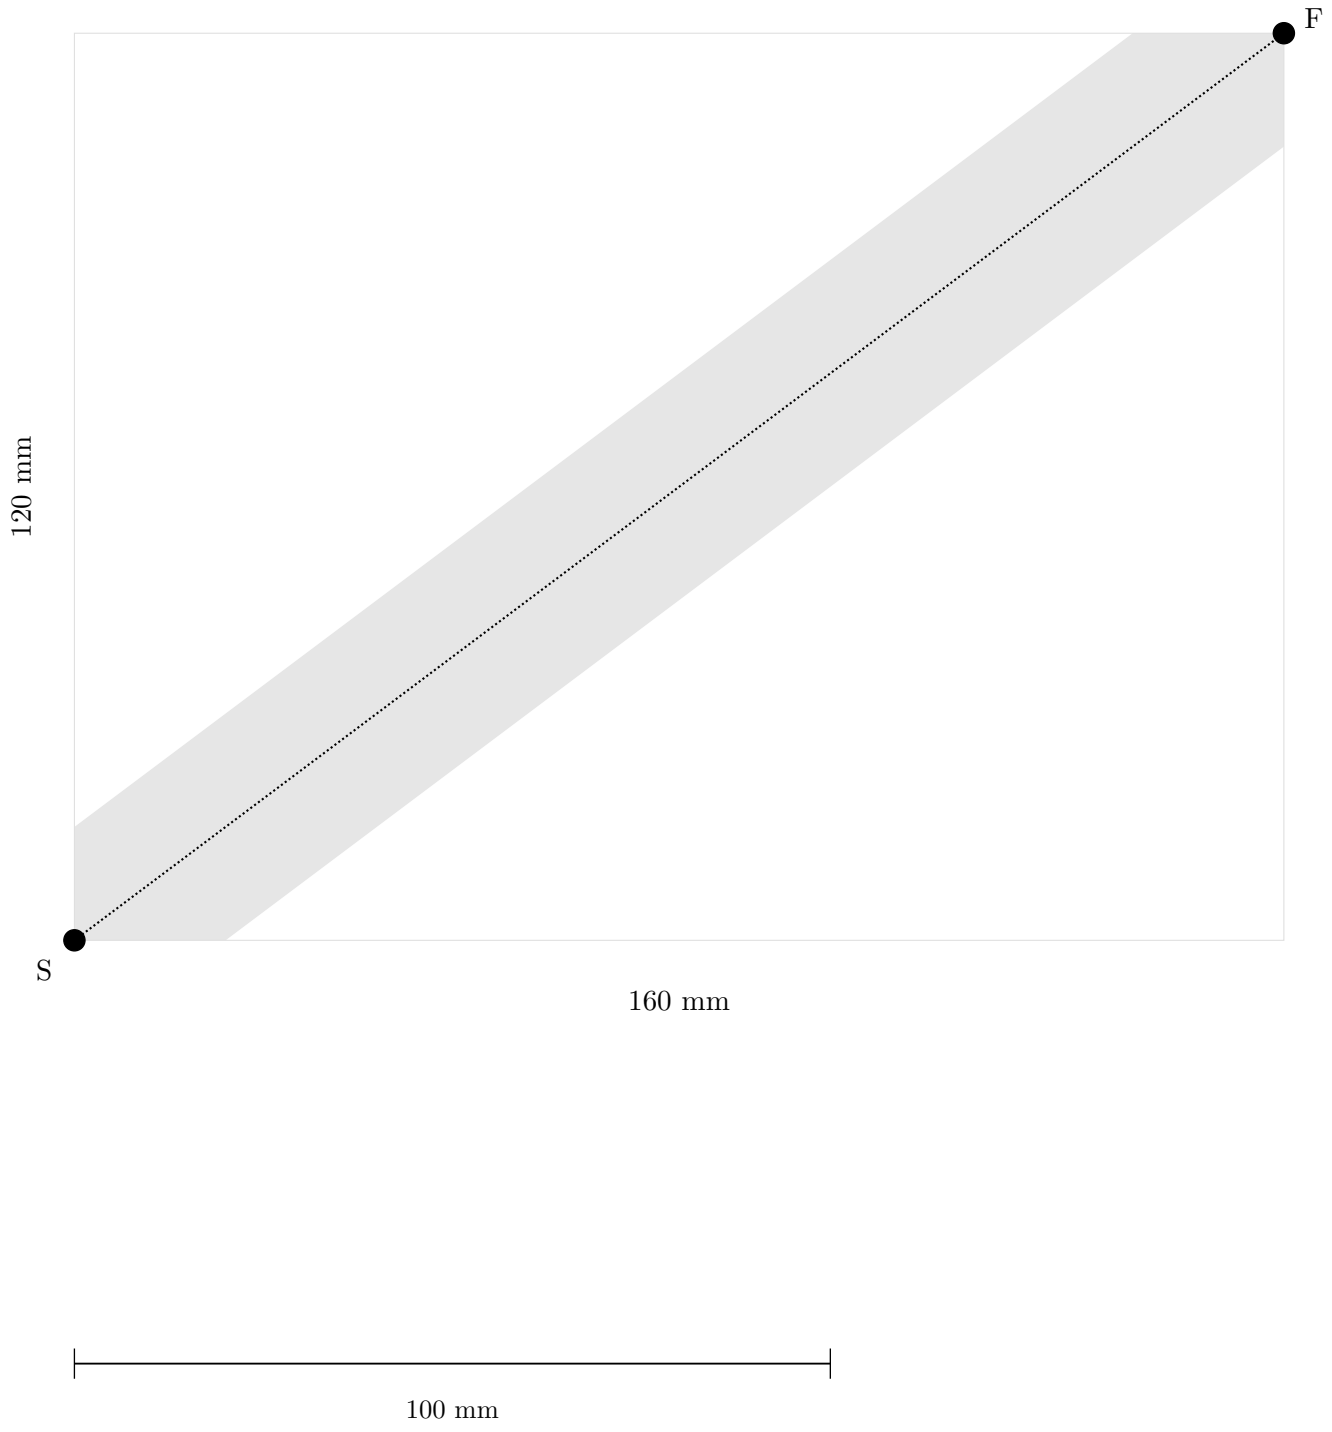
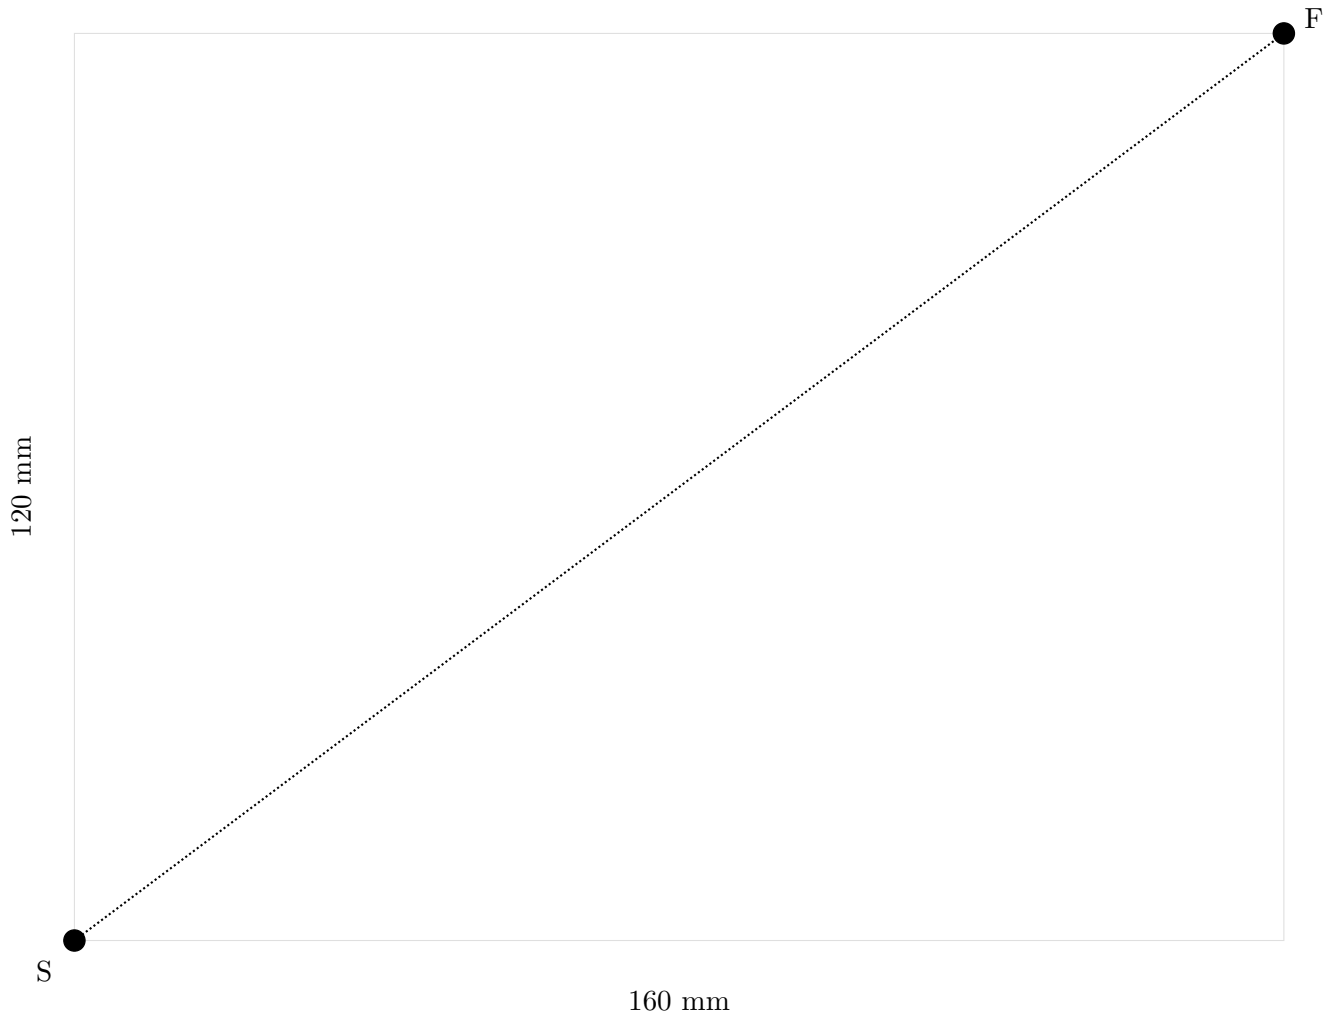
A staircase goes only right and up. Measure along all its pieces.

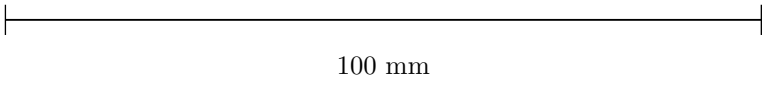


Problem 4: Make a staircase inside the gray strip with as few turns as you can. Its pieces may follow the edge of the strip.



Problem 5: A path may now go left as well as right and up. Make two different S-to-F paths that use the same amount of string and more than a staircase.





Problem 6: Can a path with a leftward piece use less string than a staircase?
