Every two animals play one game, and one of them wins. Lay an arrow card from the winner to the loser. In a line-up, each animal beat the animal right after it.

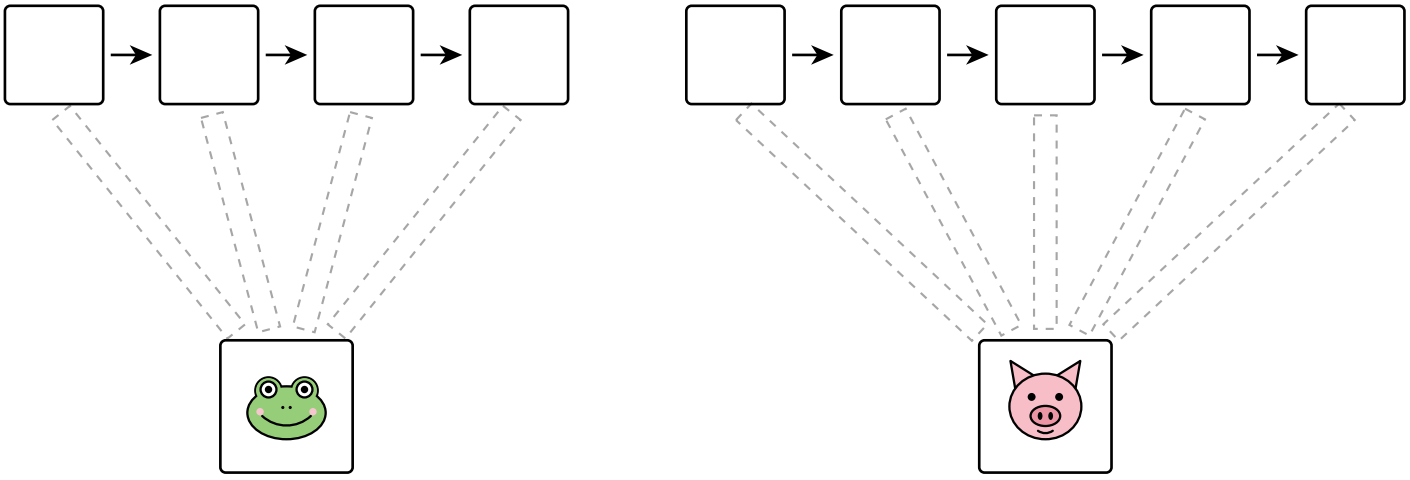

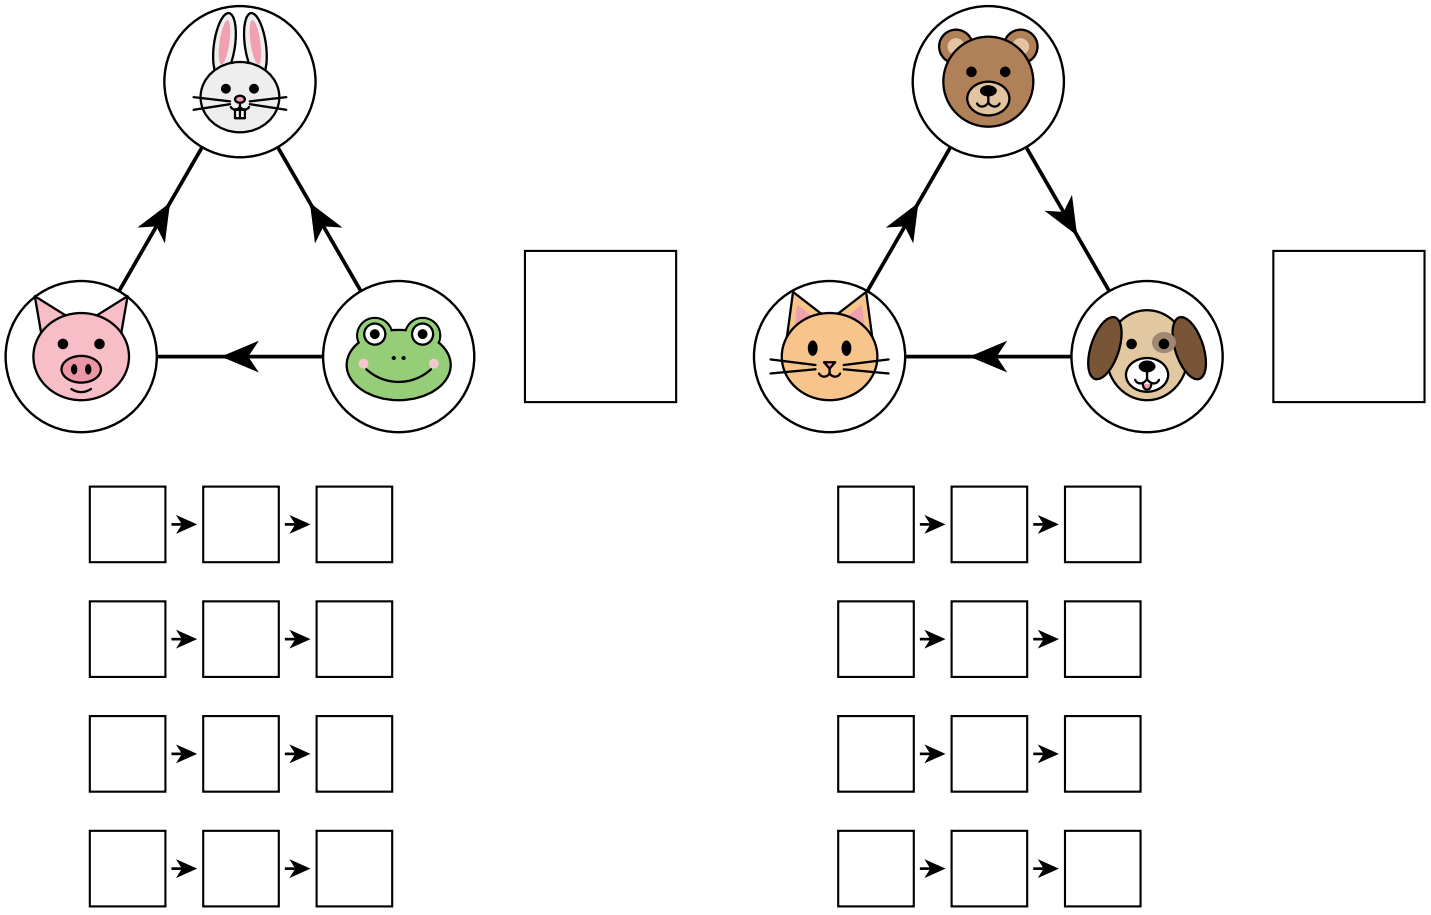

Problem 1: Play rock-paper-scissors for every two animals on this board, and leave each arrow card where you put it. Then line up the four animals on the line-up strip.

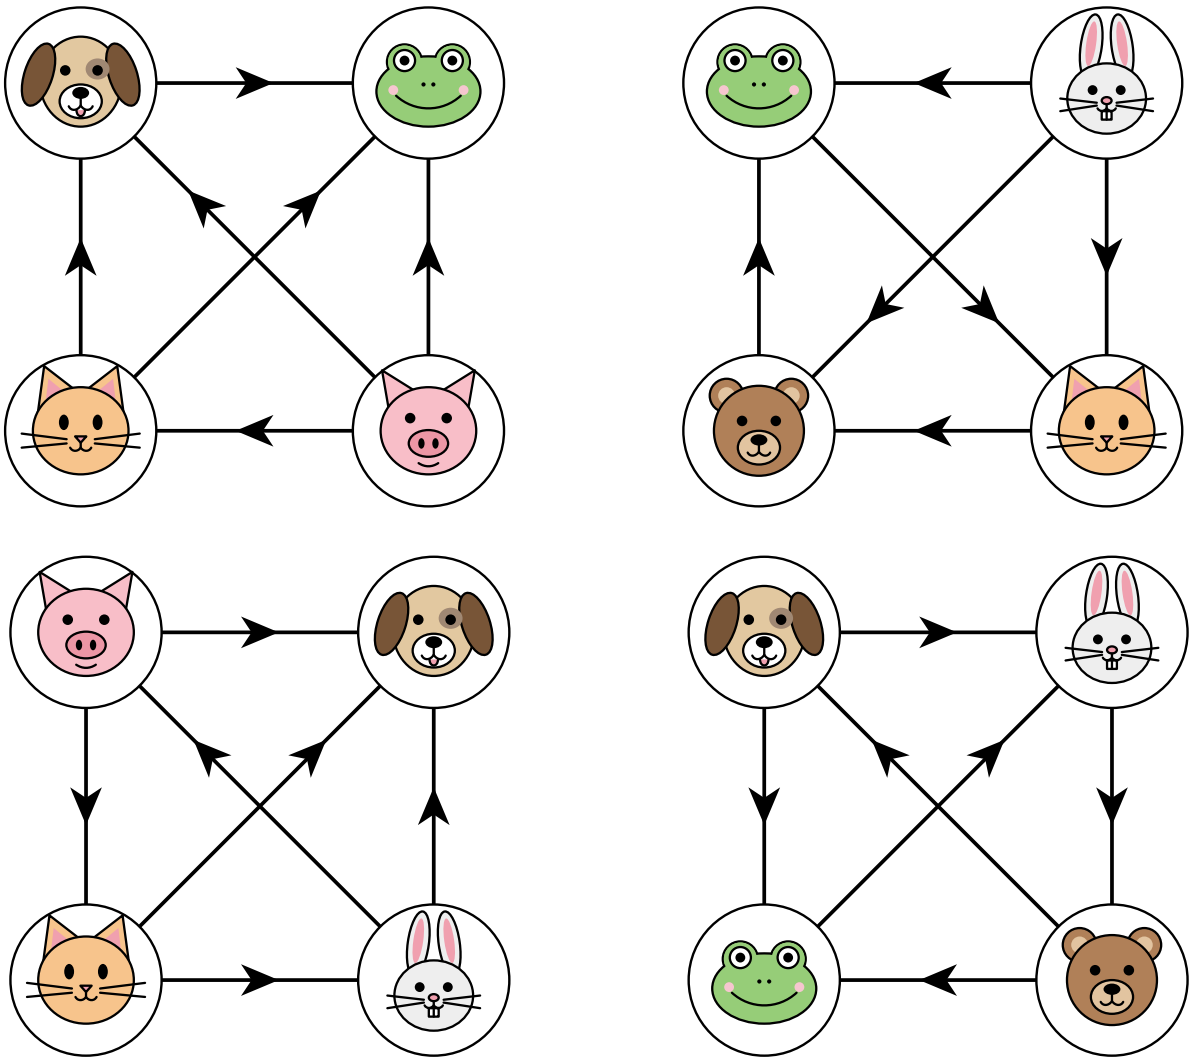

Problem 2: The frog plays each animal in your line-up from Problem 1, with the arrow cards laid as in the picture. Fit the frog into the line-up without changing the order of the others. Then do the same with the pig.

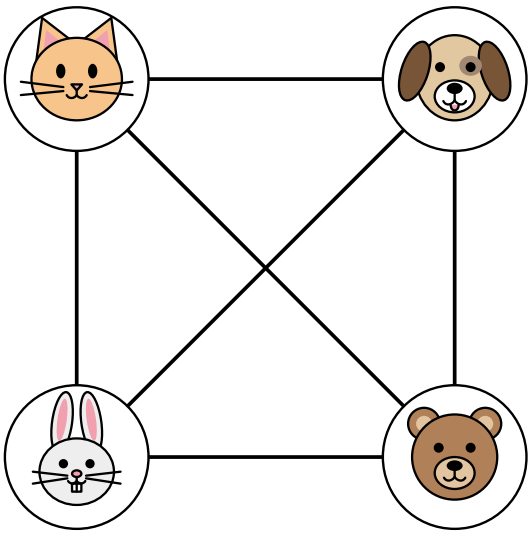

Problem 3: How many ways can these three animals line up? Find out for each picture.

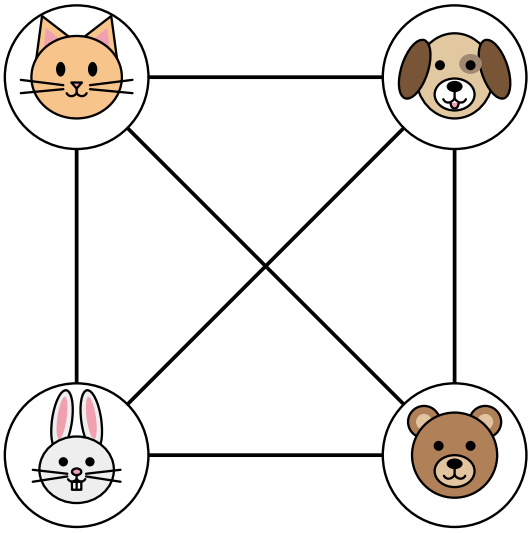

Problem 4: Line up the four animals in each picture.

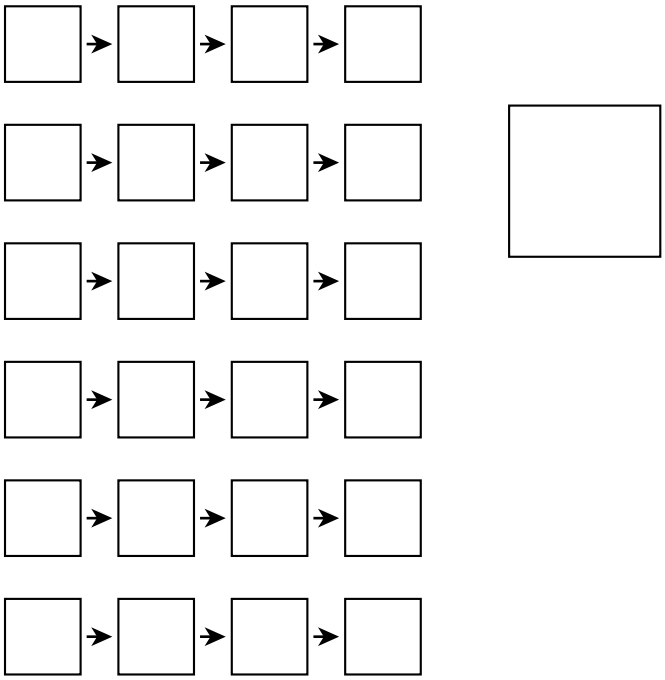

Problem 5: Lay arrow cards on the big board so that the four animals can line up in only one way, and draw the arrows here.

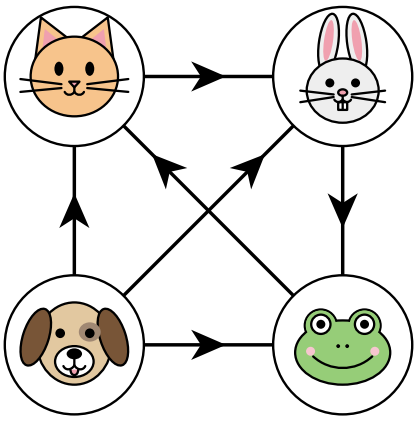

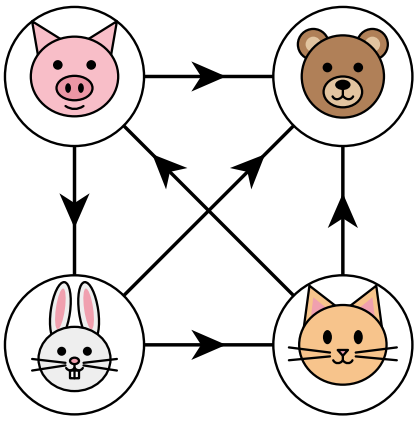

Problem 6: Lay arrow cards on the big board so that the four animals can line up in as many ways as possible, and draw the arrows here. How many ways is that?

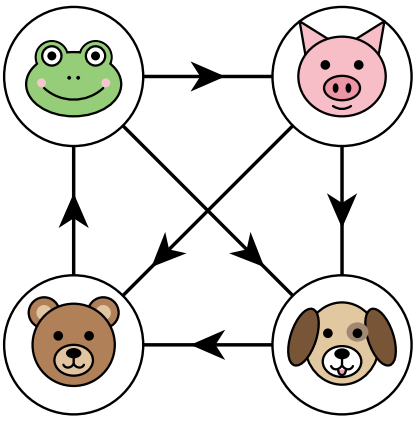

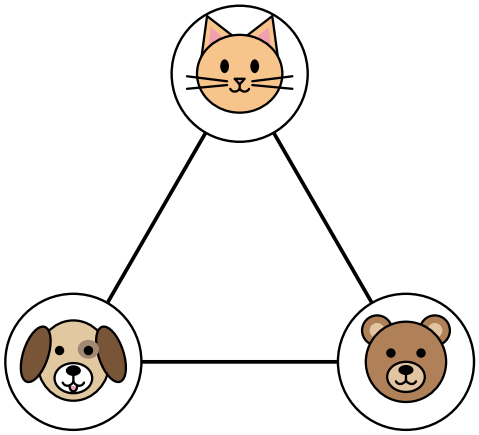

Problem 7: Which animals can be first in a line-up? Circle them in each picture.

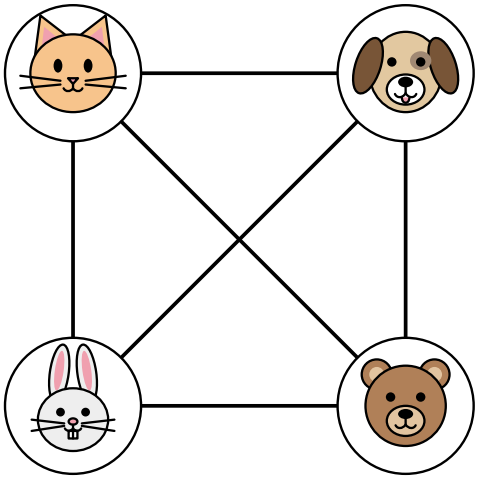

Problem 8: Can every animal win the same number of games? Try it on the big board with the cat, dog and bear, then with all four animals, and draw the arrows on these pictures.

Problem 9: Can two of the animals both win all their games? Try it on the big board.

Problem 10: Can you lay arrow cards on the big board so that the four animals cannot line up at all?
