Tetrahedron model: net with 90 mm edges

Print on card stock, at 100%: K–1 4 · Grades 2–3 4 · Grades 4–5 3 · adults 2. One model per sheet: one for each child, and two for the adults, who use them for the pretest and the launch and keep them as spares.

Cut on the solid outline. Score the dashed lines with a ballpoint pen against a ruler, then fold each so the printed side ends up inside. Close the model with the three tabs inside and tape each of the three open edges along its full length. A closed card tetrahedron cannot flex: it is the rigid model the pages call for. Leave the faces blank; letters go on the caps. Allow about 6 minutes per model.

Letter caps: A, A, B, B, C, C, D for each model

Print on card stock, at 100%: K–1 1 · Grades 2–3 1 · Grades 4–5 1 · adults 1. Each sheet gives four models their seven caps: 8 A, 8 B, 8 C and 4 D. The spares let a pair make any two letters equal while keeping one of the two names (grades 2–3 and 4–5 Problem 4), and build A, A, B, C (K–1 Problem 4, grades 2–3 Problems 5 and 6).

Cut each row out along its two long edges, then cut along the slanted lines. Fold both dashed lines of each cap so the letters are outside. A cap wraps one corner of a model, its three triangles on the three faces there; a pea-sized ball of sticky tack inside holds it. To change a letter, swap the cap.

Pose mat: two footprints

Print on copy paper, at 100%: K–1 2 · Grades 2–3 2 · Grades 4–5 2 · adults 1. One sheet for each pair or trio, and one for the launch. Each footprint is the size of a model face.

Stand each model on a footprint, corners on the corners. Then “same pose” means the same letter at the top, at the back, at front left and at front right. Cut across the middle line to give each child a footprint, or keep the pair together.
