A card fits inside another when all its pictures are on the other card. The empty card fits inside every card. In a collection, no card may fit inside another. Use a card only once in a collection.

Problem 1: Find every collection of one or more cards from this deck that follows the rule. How do you know you have them all?

Problem 2: Find the largest collection you can from this deck. Find every collection of that size.

Problem 3: Use the same deck. Keep each starting collection and add as many cards as you can. Does being unable to add a card mean a collection is as large as possible?
