Keep cords on the table. Move them without cutting or passing strands through each other. Use red (R), blue (B), and green (G).

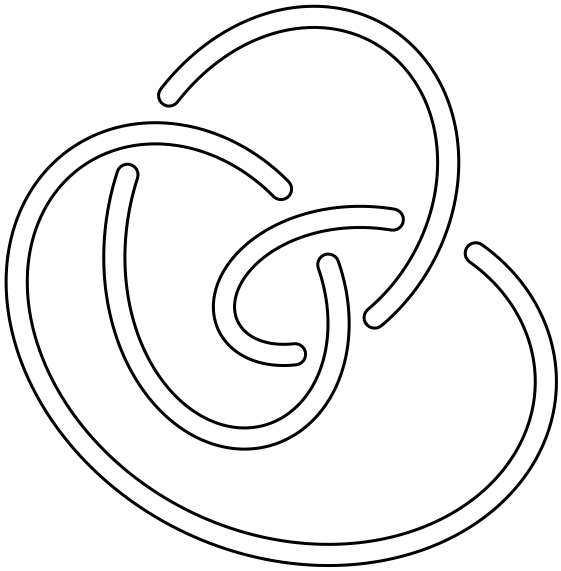

Follow X across the overpass to the next gap.

An arc runs between underpasses and continues through overpasses. A closed strand with no underpasses is one whole arc. Give each whole arc one color. At each crossing the colors must be all the same or all different.

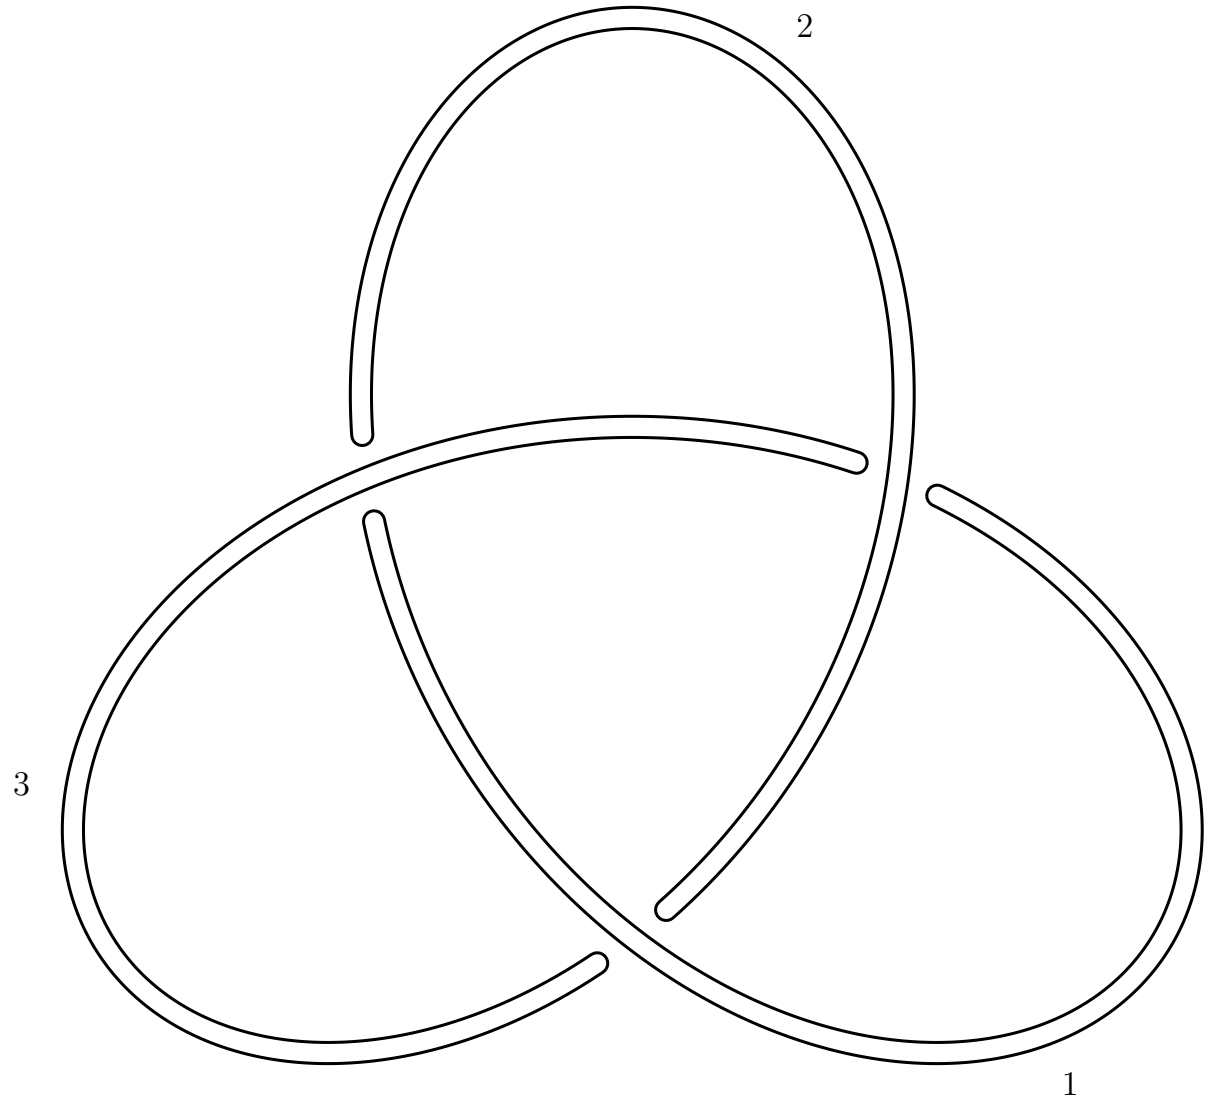

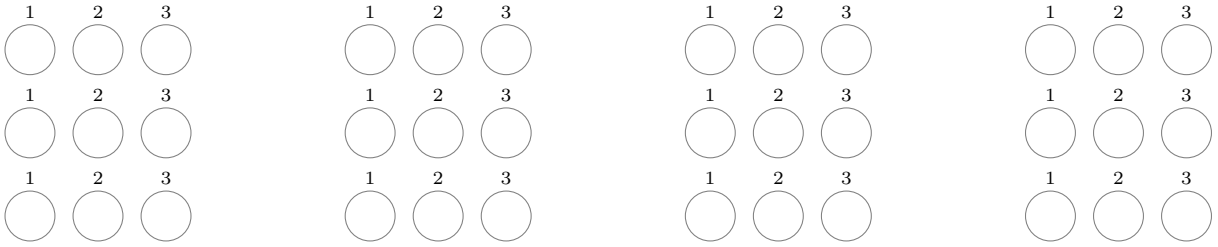

Problem 1: How many whole arcs does this loop have?

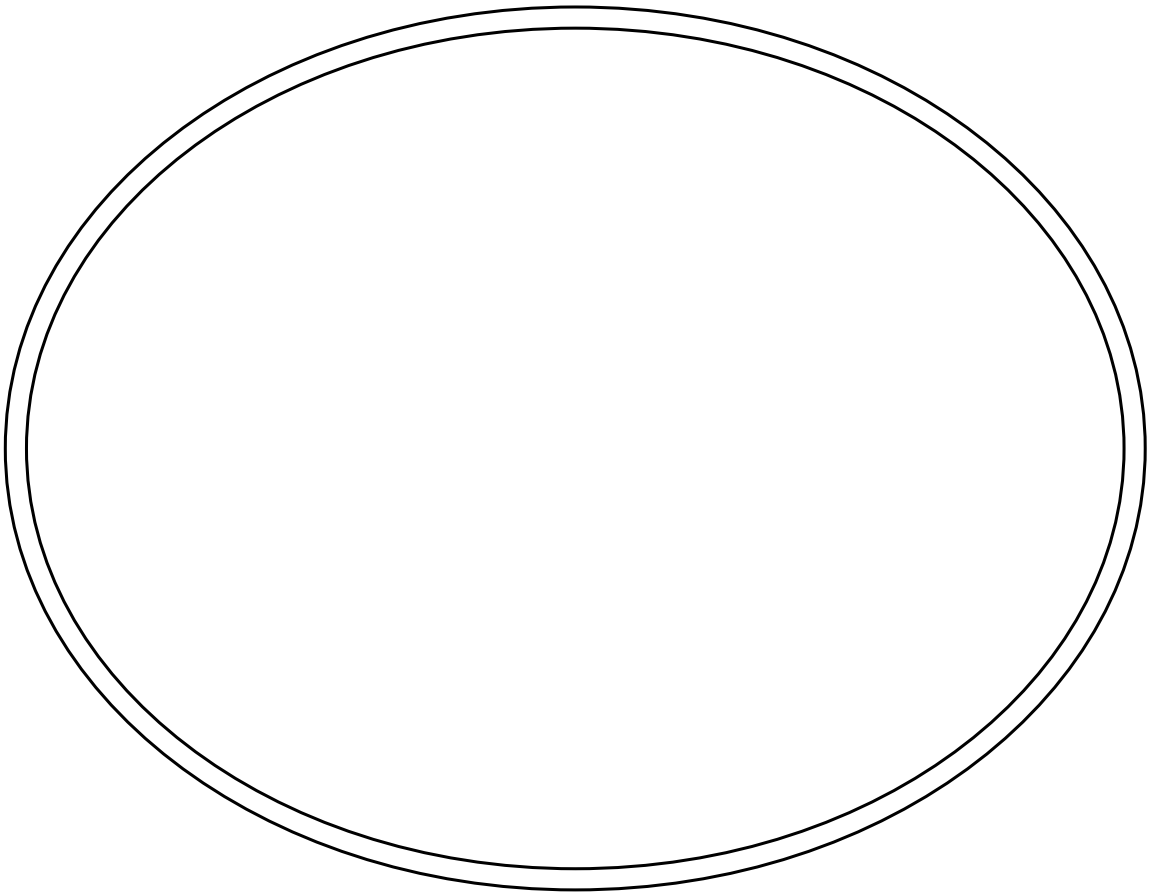

arcs: _____

Problem 2: Find every valid coloring of this loop, including one-color choices. Record color dots for whole arcs 1, 2, and 3; use tracing paper for new tries.

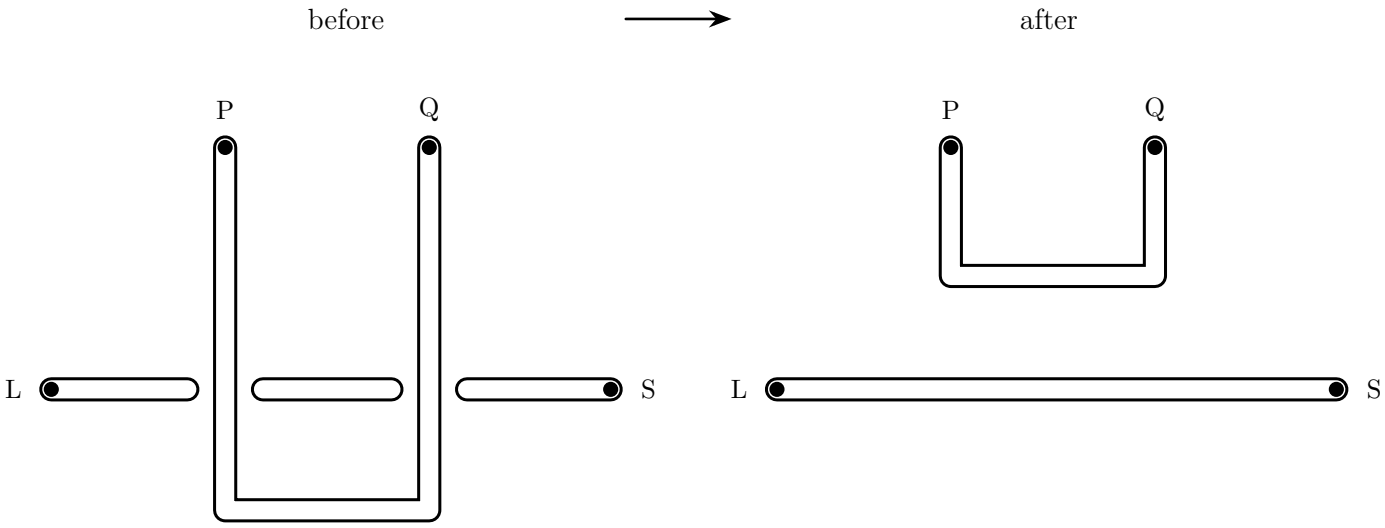

Problem 3: Find every valid coloring of this plain loop. Can any use more than one color?

Problem 4: Try each of the four closed cords A, B, C and D in the tray. Which cords can you move into this plain loop shape?

Problem 5: Color both pictures so matching end dots have the same colors. An arc may stop at an end dot here. Find every pair of colors at L and P that works.
