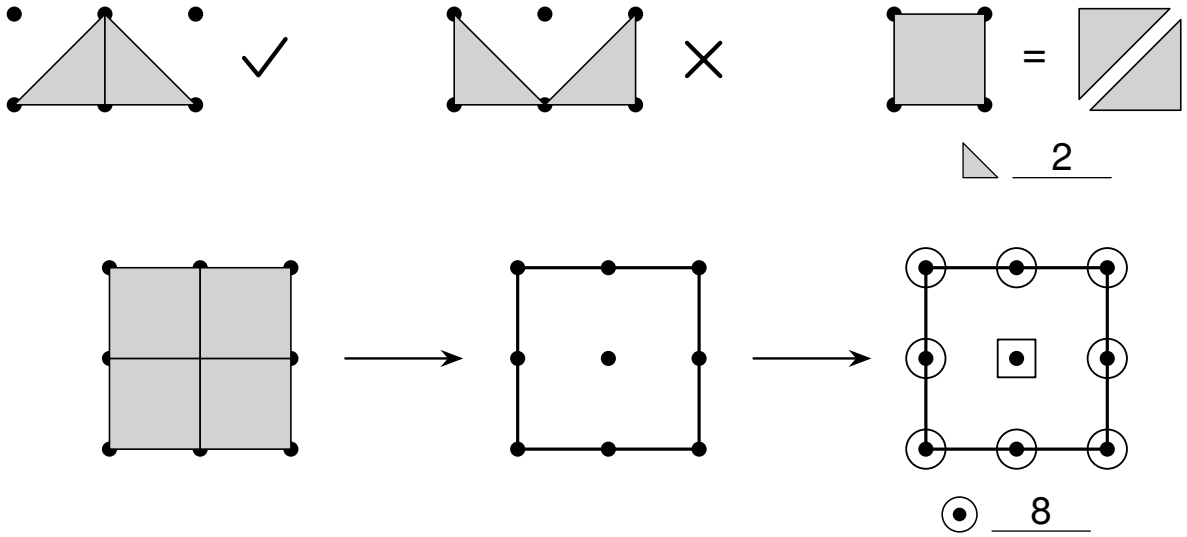
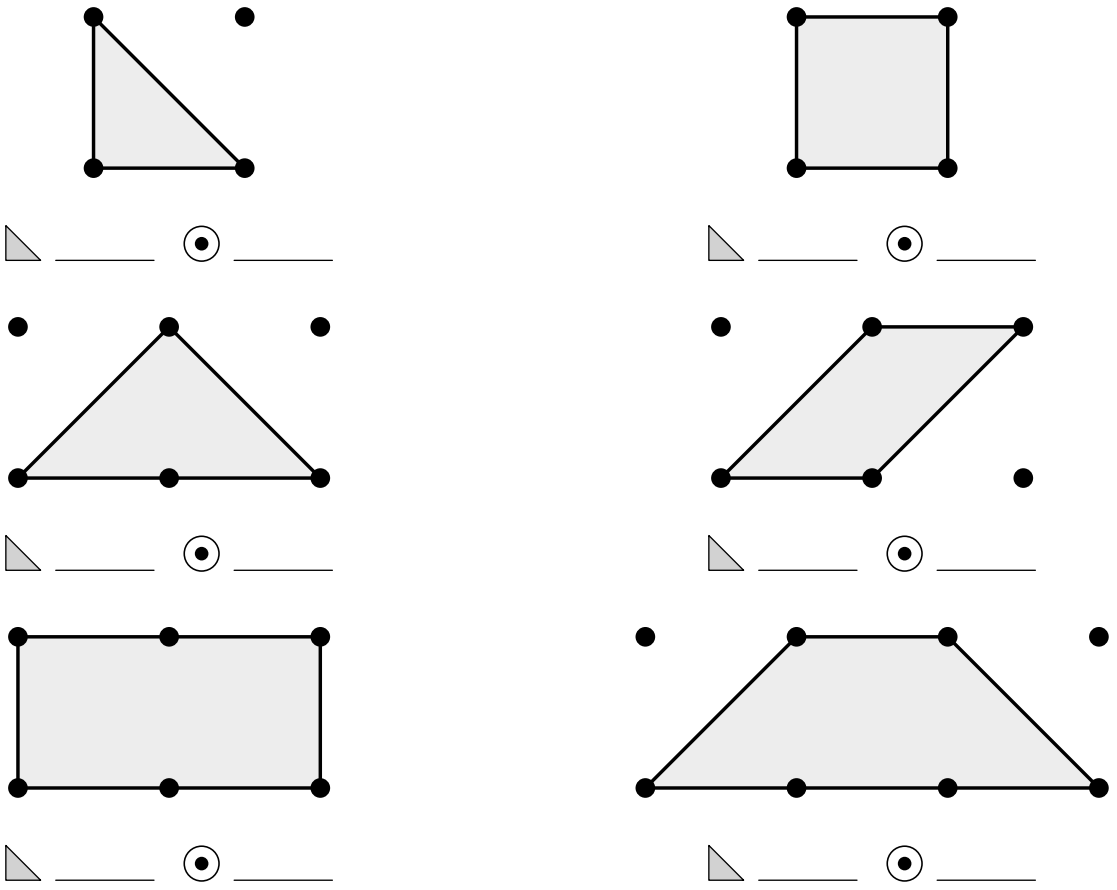
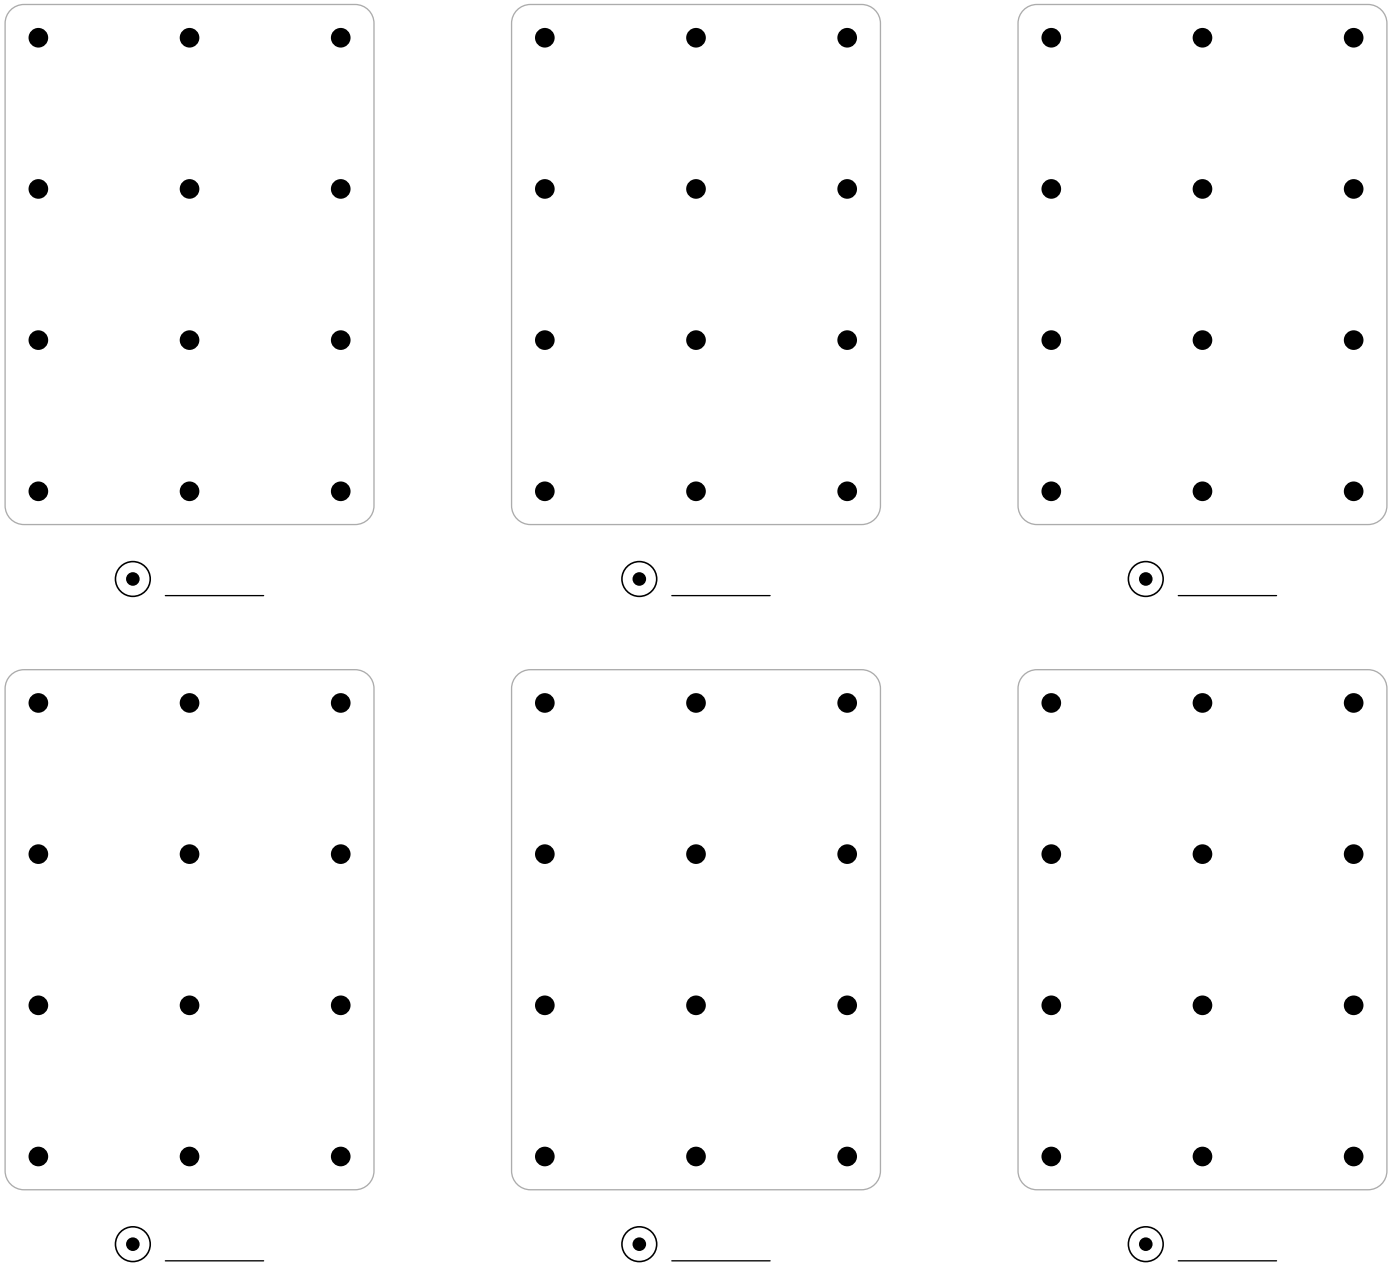
Squares and halves go flat on the dots, with every corner on a dot. Pieces join along whole sides into one shape, with no gap inside. A square counts as two halves. Circle the dots on the outline of a shape and box the dots inside it.



Problem 1: Cover each shape with halves.



Problem 2: Make shapes from three halves, one on each board. Can you make two shapes with different numbers of dots on their outlines?



Problem 3: Make different shapes from four halves, one on each board. Find one with as few dots on its outline as you can.

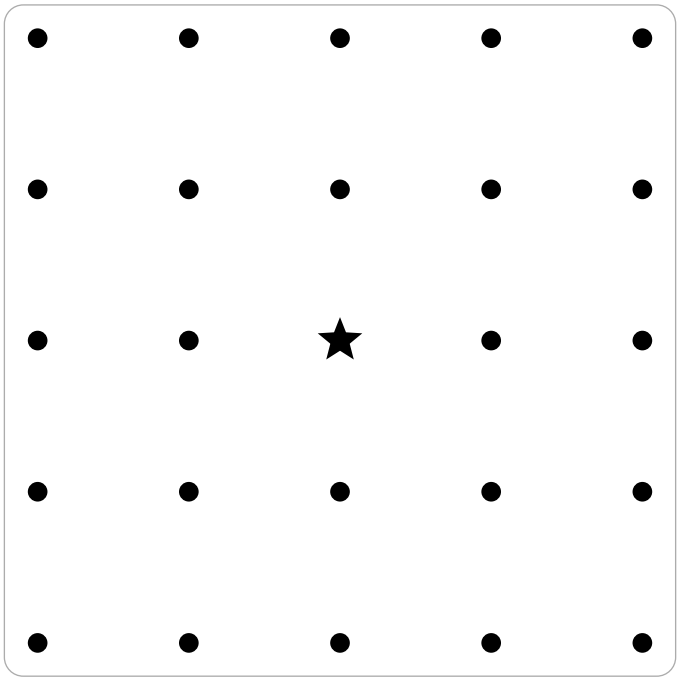
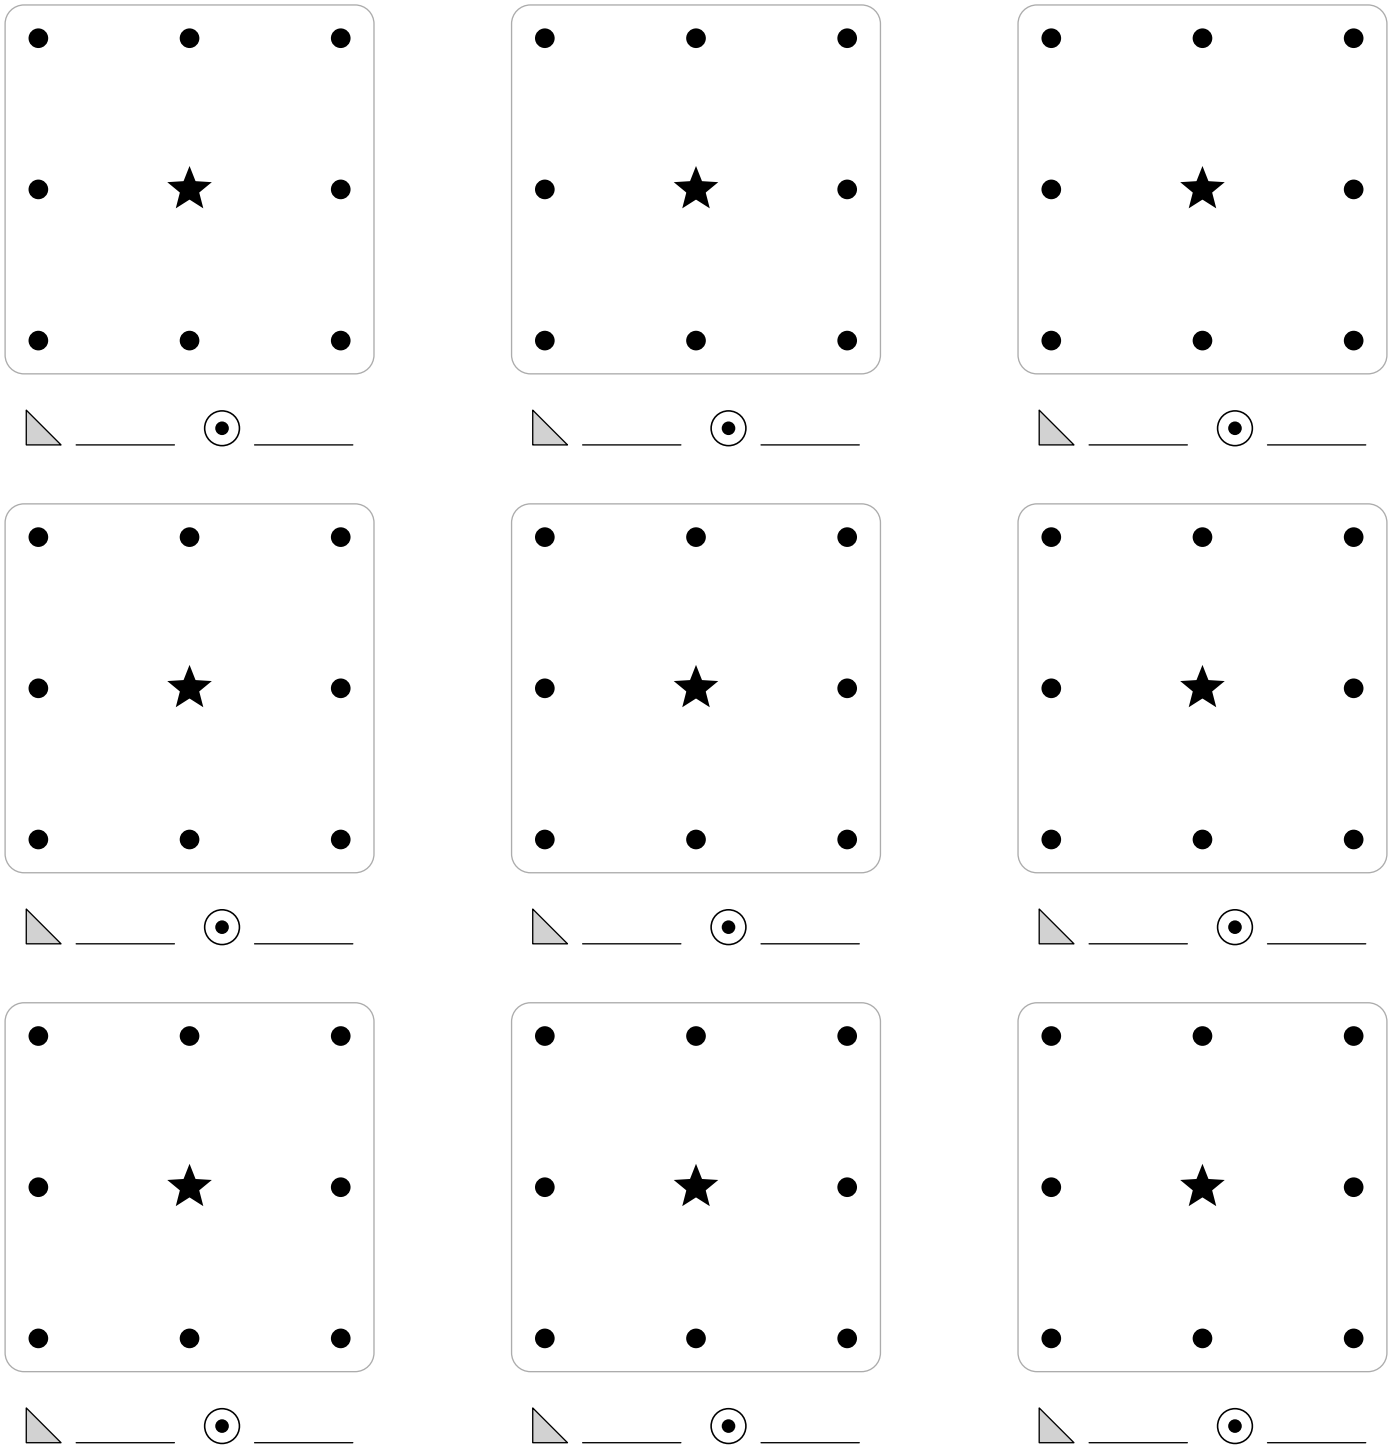
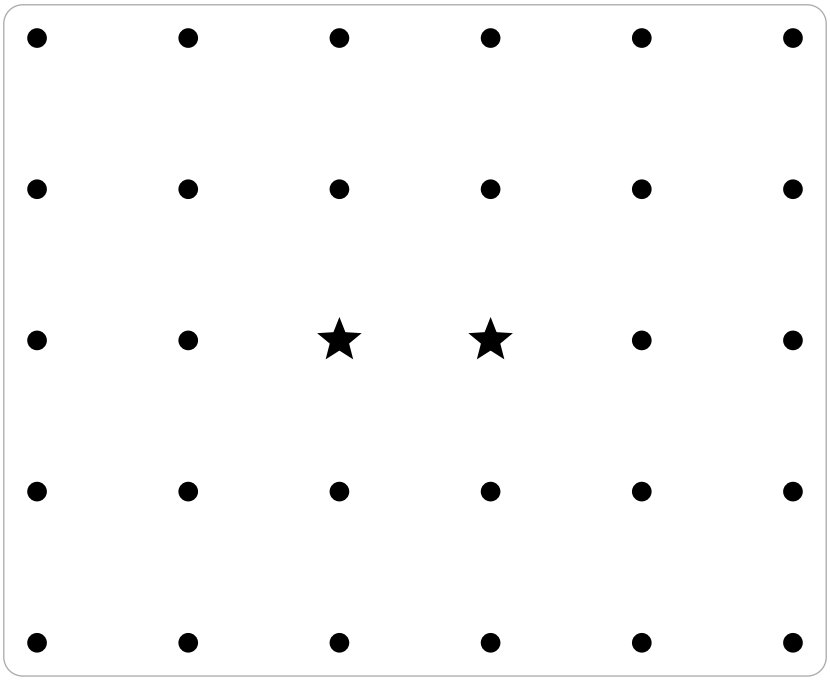
Problem 4: Can three pieces make a shape with the star inside? If they can, make one. If they can't, explain why.

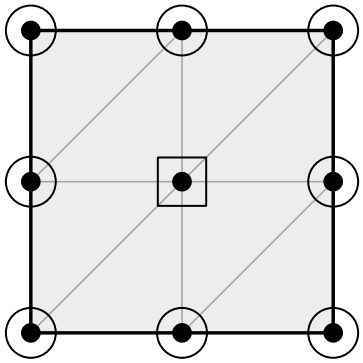


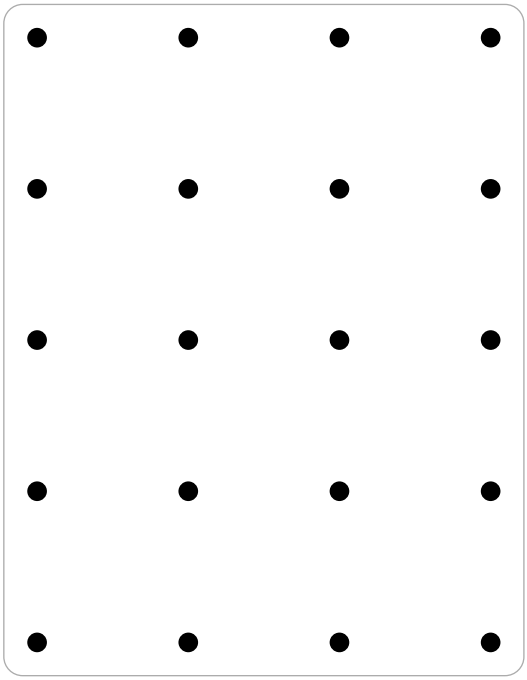
Problem 5: Make shapes from four pieces with the star inside, one on each board. A turned shape counts as the same shape. How many different shapes can you find?

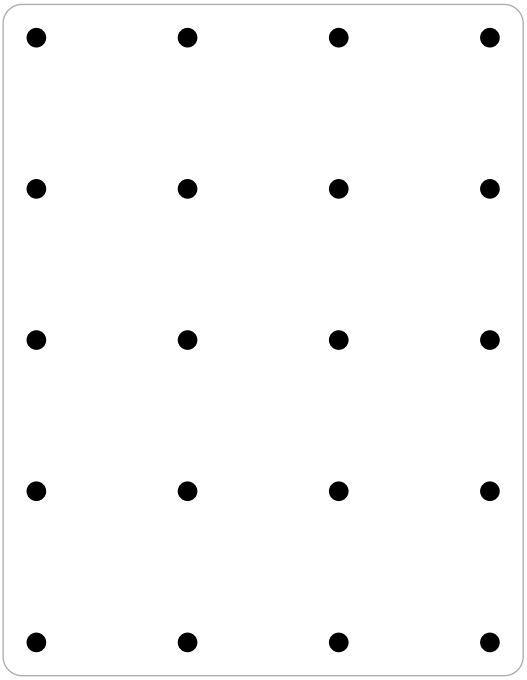


Problem 6: Make a shape with both stars inside, using as few pieces as you can.









Problem 7: Make a shape from eight halves with fewer dots on its outline than this square.
