Each card is one voter, and only the cards vote. In a vote between two letters, each card votes for the one higher up on that card. More votes wins.

Problem 1: Use cards V1, V2 and V3 for each vote below. Circle the winner.

Problem 2: In a knockout, the cards vote on the first pair of letters. Then they vote between that winner and the letter that waited.

Run each knockout below on the knockout mat with cards V1, V2 and V3. Circle the winner.

First pair B C Waiting A

A B C

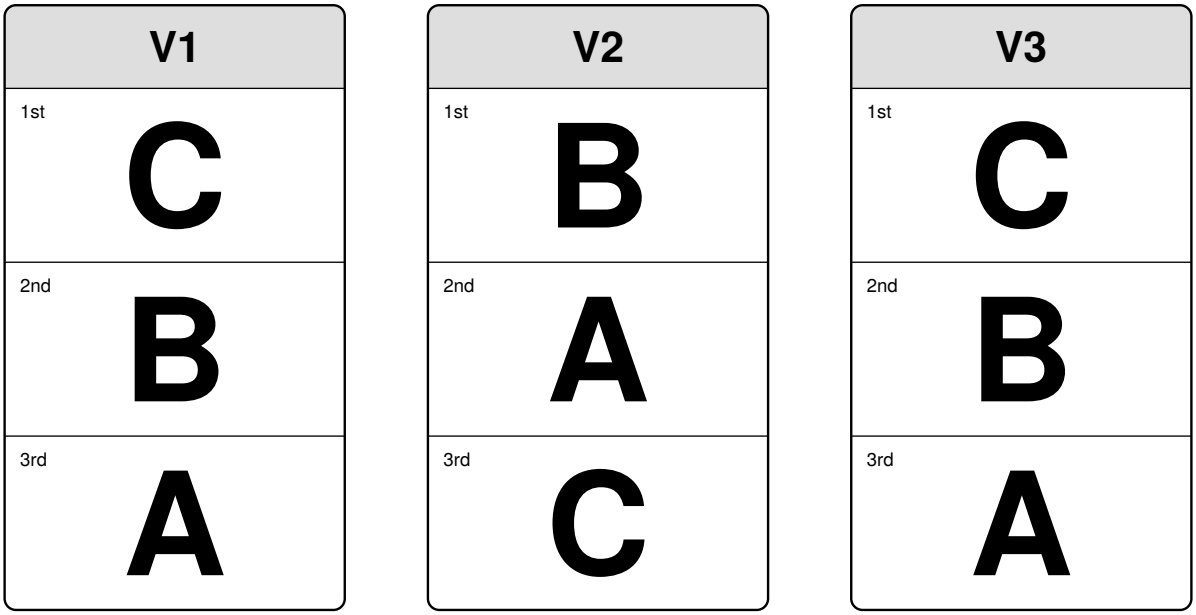

First pair C A Waiting B

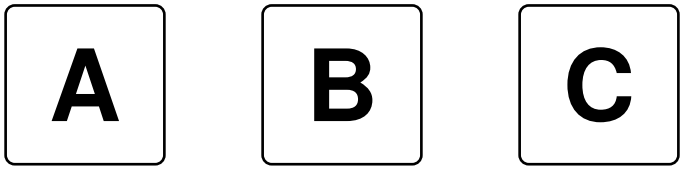

A B C

First pair A B Waiting C

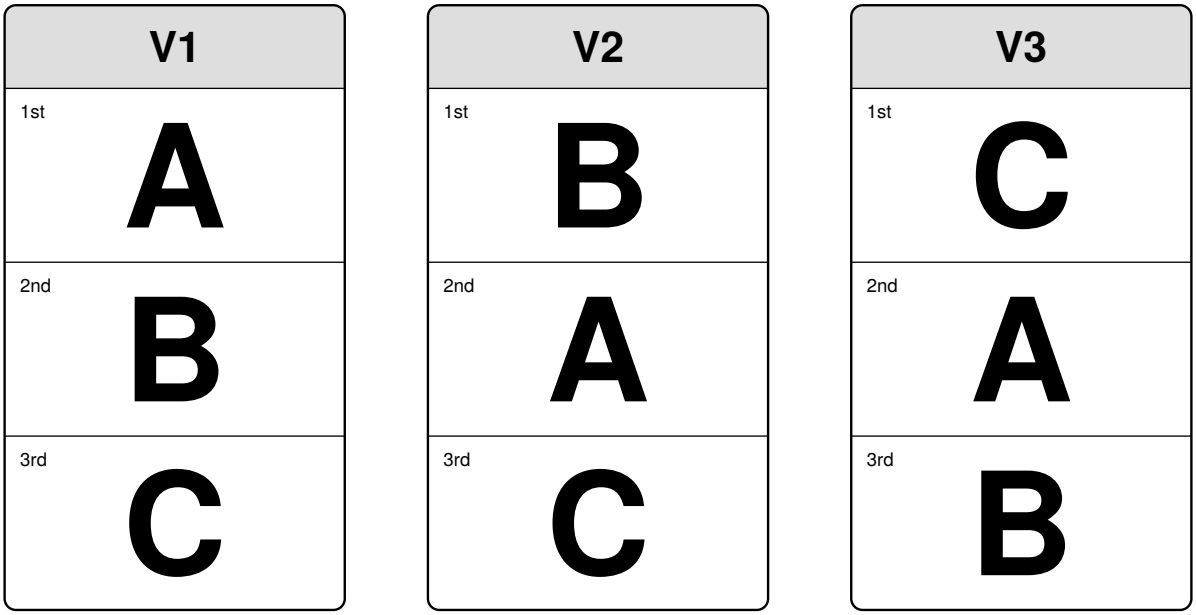

A B C

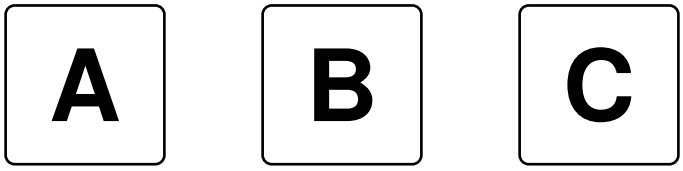

Problem 3: Use these cards instead of yours. Which letters can win a knockout? Circle each one.

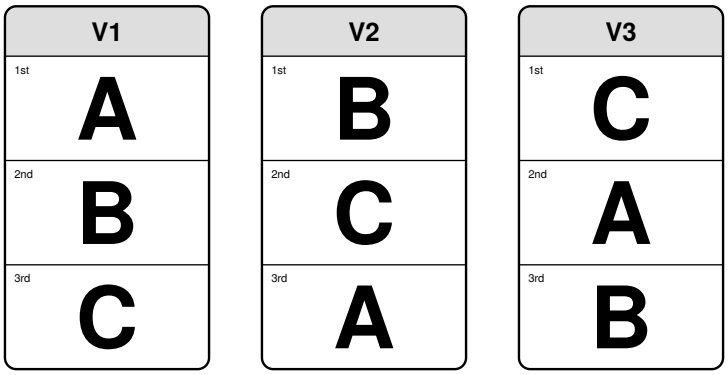

Problem 4: Use these cards instead of yours. Which letters can win a knockout? Circle each one.

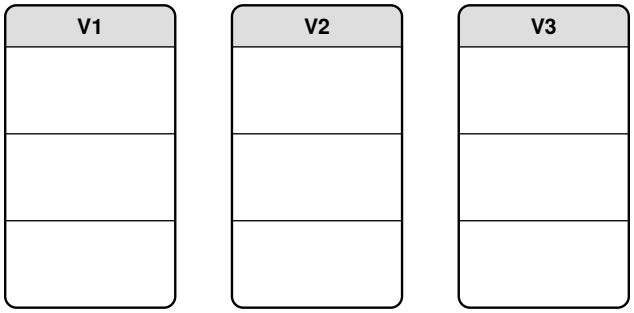

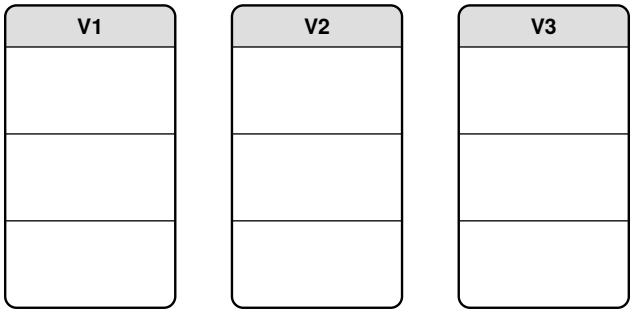

Problem 5: Swap two letters on one of these cards so that C wins, no matter which letter waits. Make the new card from a blank card and letter slips.

Problem 6: Build three new cards V1, V2 and V3 from blank cards and letter slips, with one A, one B and one C on each card. Make B win, no matter which letter waits.

Problem 7: Build three cards the same way, with B 1st on just one card. Make B win, no matter which letter waits, or use the cards to show why you can't.

Problem 8: Build three cards the same way, with B never 1st. Make B win, no matter which letter waits, or use the cards to show why you can't.
