Build each square on the board, filled in. To take away a group, fill the group card with tiles from the square and put them in the cup. When too few tiles are left to fill the card, those tiles are the leftover. The leftover can be 0.

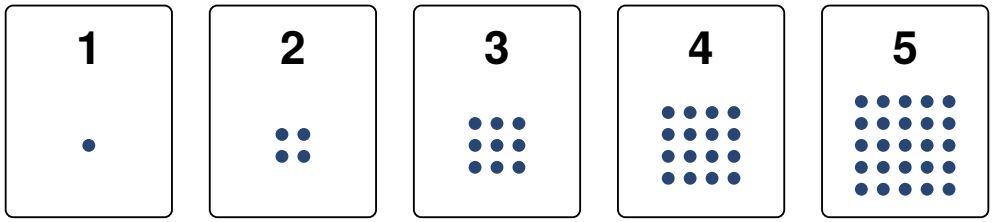

Problem 1: Build each square and take away groups of 4. Circle every number a square can leave.

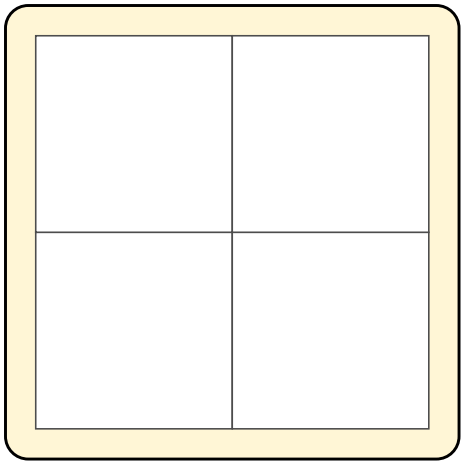

0 1 2 3

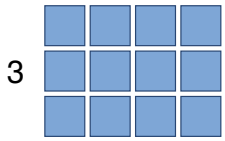

Problem 2: Behind the folder, one partner builds the square from one of these cards and takes away groups of 4. The other partner sees only the leftover and circles every card that could have made it. Then show the card.

	1	2	3	4	5
	1	2	3	4	5
	1	2	3	4	5
	1	2	3	4	5

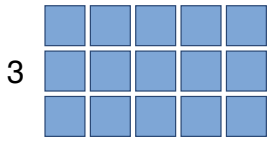

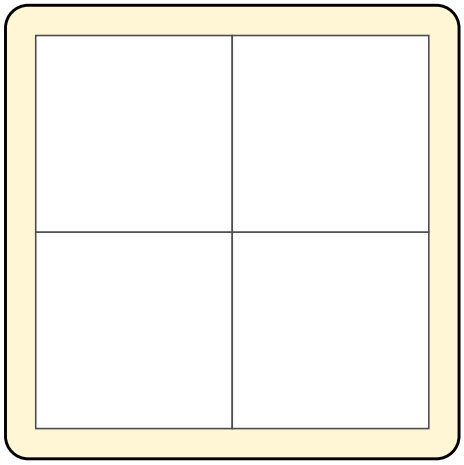

Problem 3: Build each rectangle and take away groups of 4. Can a rectangle leave 2 or 3?

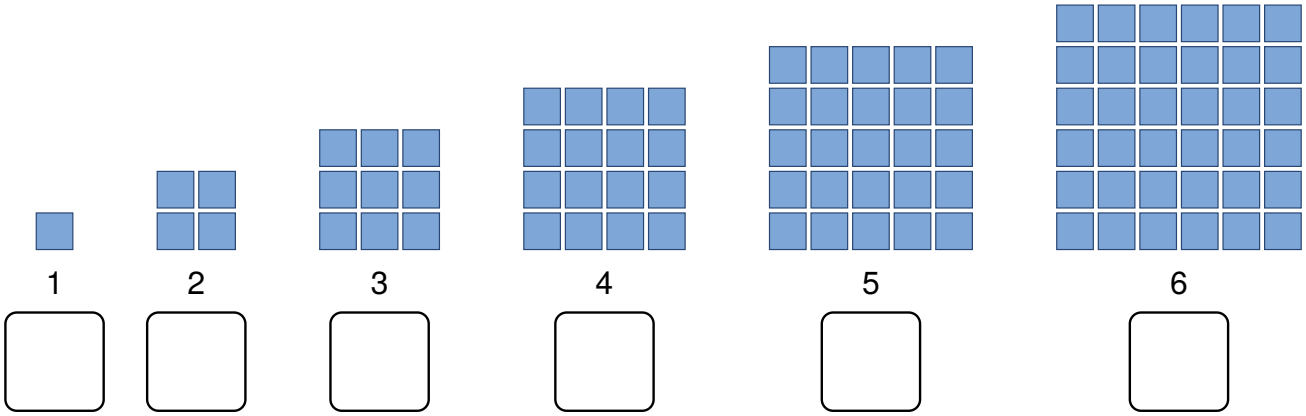

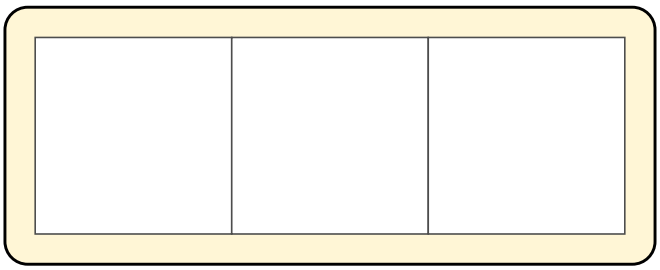

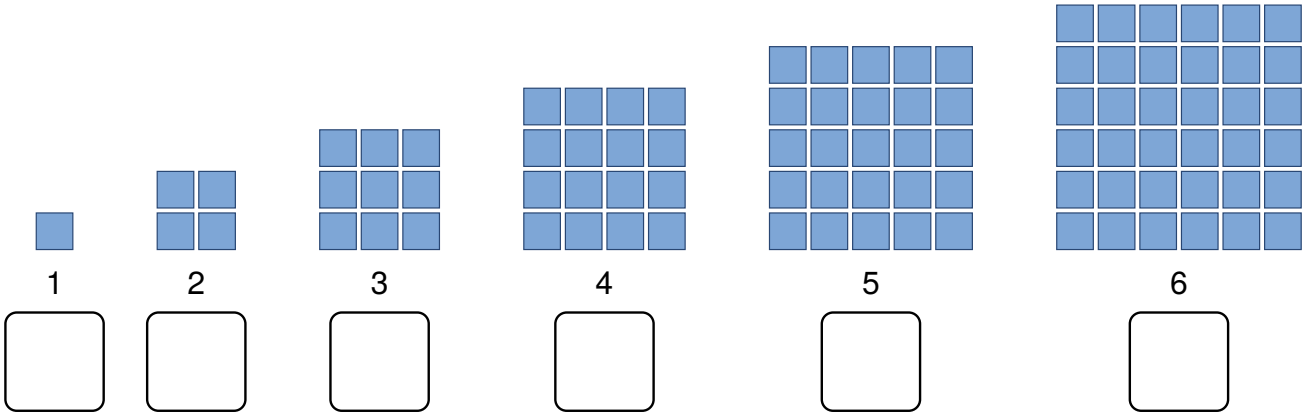

Problem 4: Build each square and take away groups of 3. Circle every number a square can leave.

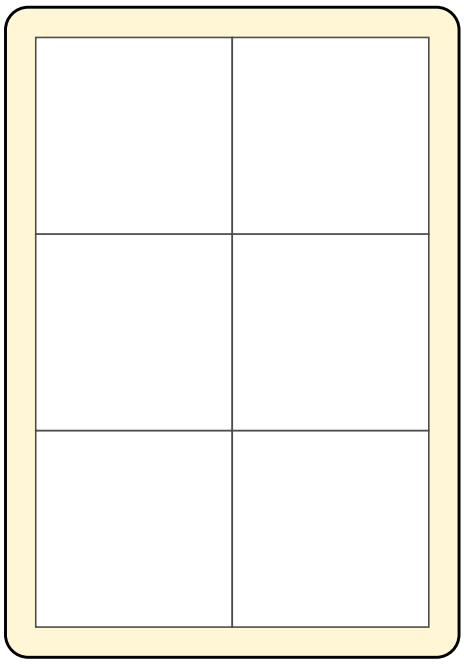

0 1 2

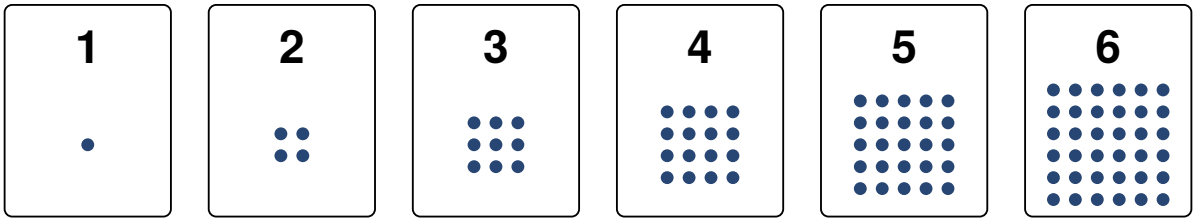

Problem 5: Build each square and take away groups of 6. Circle every number a square can leave.

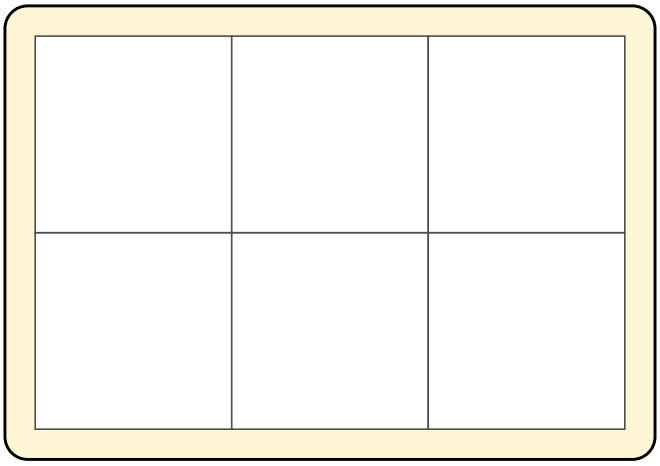

0 1 2 3 4 5

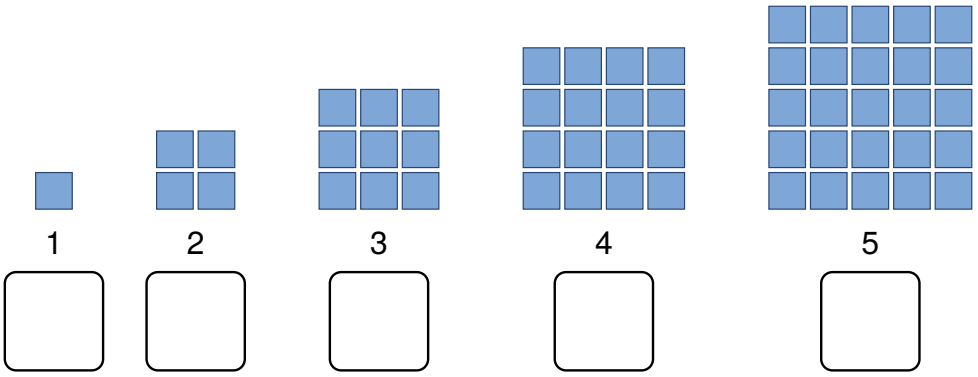

Problem 6: Play Problem 2 again with these cards and groups of 6.

	1	2	3	4	5	6
	1	2	3	4	5	6
	1	2	3	4	5	6
	1	2	3	4	5	6

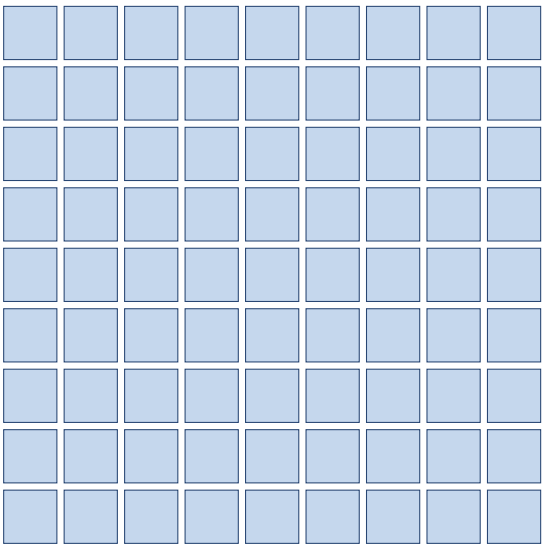

Problem 7: Build each square and take away groups of 2. Which squares leave 1?

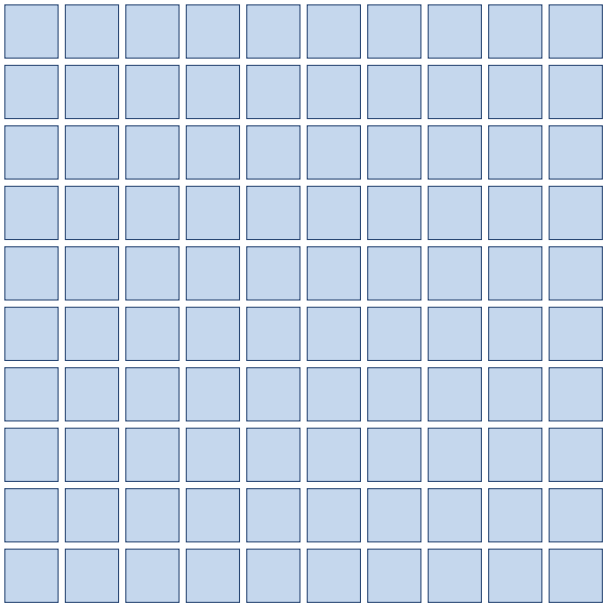

Problem 8: Without building these squares, find what each one would leave in groups of 4. Explain how you know.

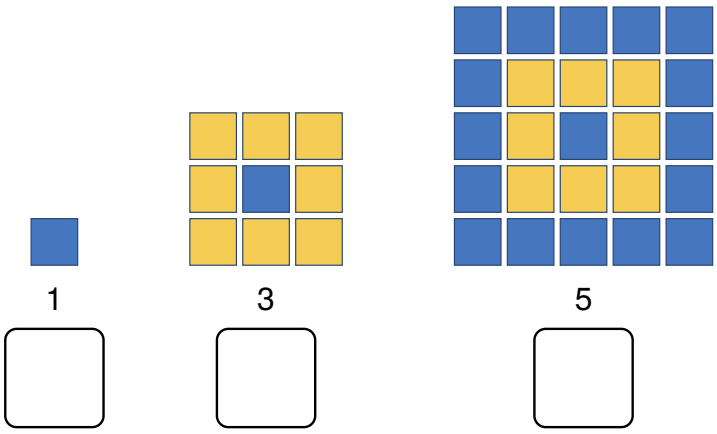

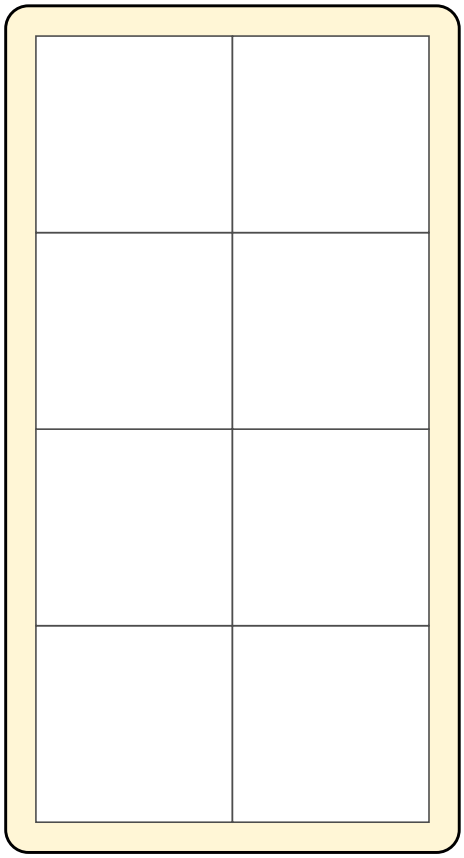

9

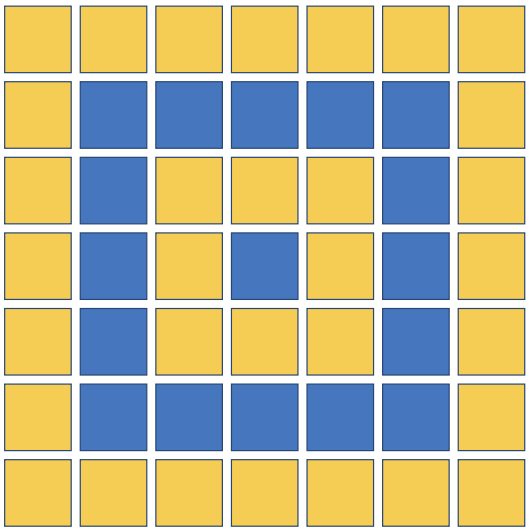

10

Problem 9: Build each square on the table from the middle out, one ring at a time, and take away groups of 8. What does each square leave?

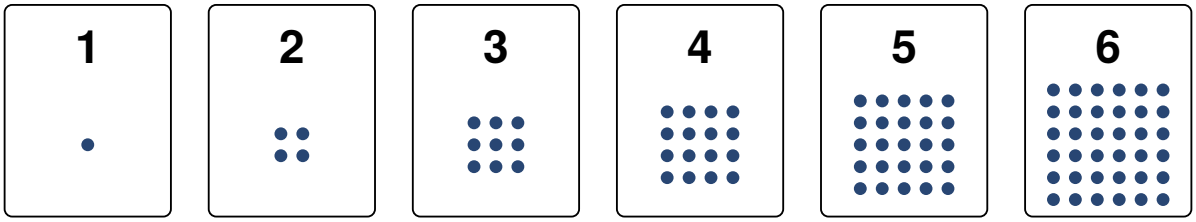

Problem 10: What would this square leave in groups of 8? Explain how you know.

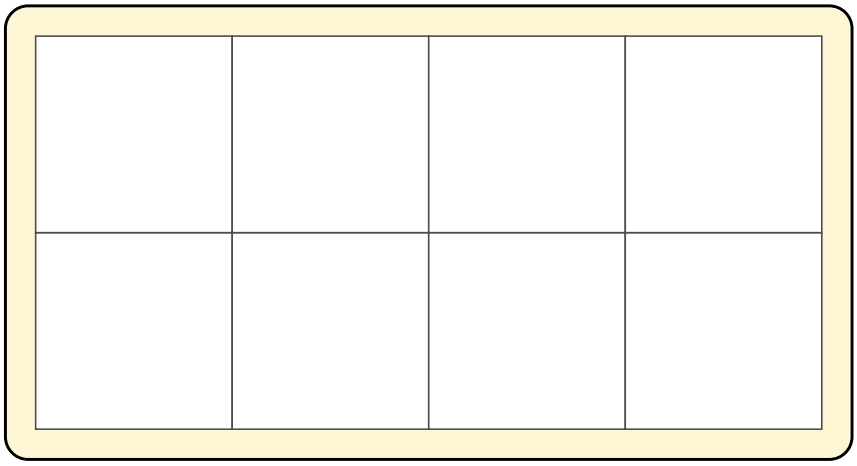

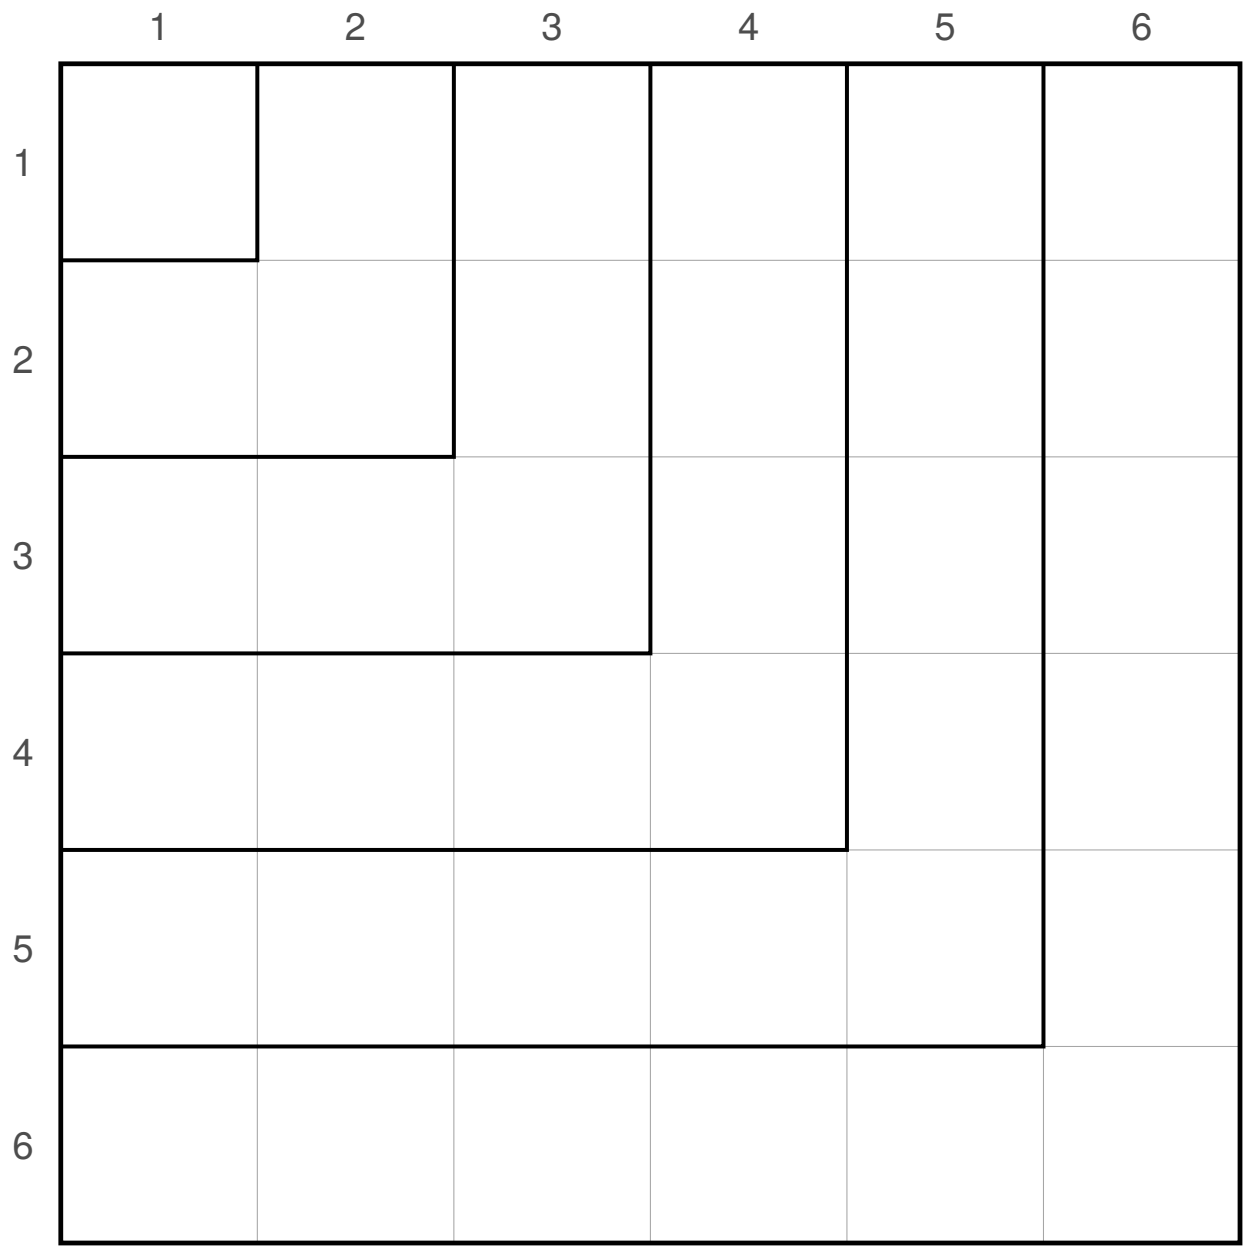

7

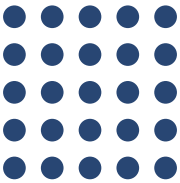

Problem 11: Play Problem 2 again with these cards and groups of 8.

	1	2	3	4	5	6
	1	2	3	4	5	6
	1	2	3	4	5	6
	1	2	3	4	5	6
