Seeds are the first counters on a board, all in one color. Grow the board with counters of the other color. A square gets a counter when two or more squares next to it, not corner to corner, have counters. Your partner points to two of them before each new counter. Counters stay put. When no square can get a counter, the board is filled or stuck.

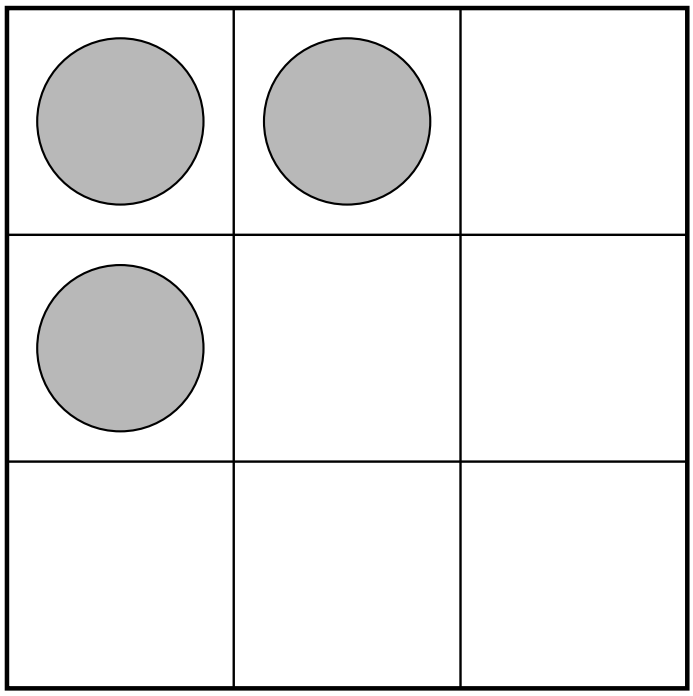

Problem 1: Find every way to put 2 seeds on this board. Draw each way with dots, and ring the ways that fill.

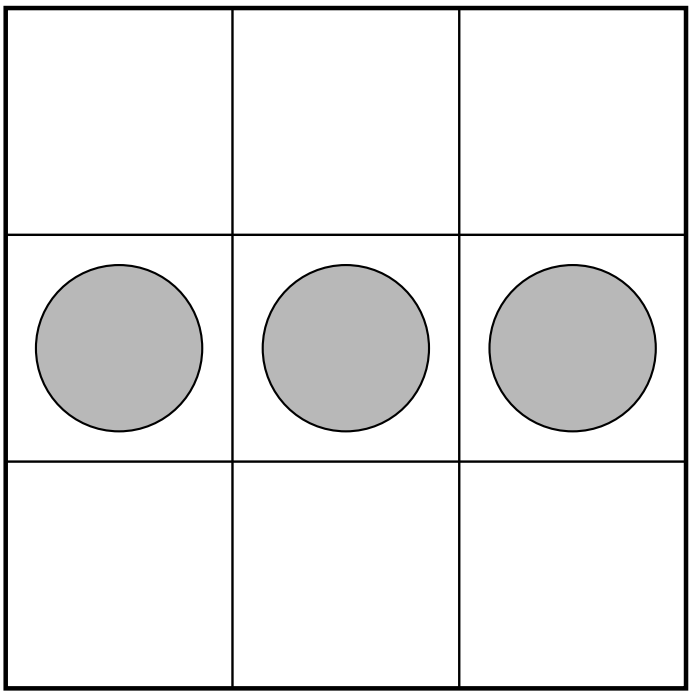

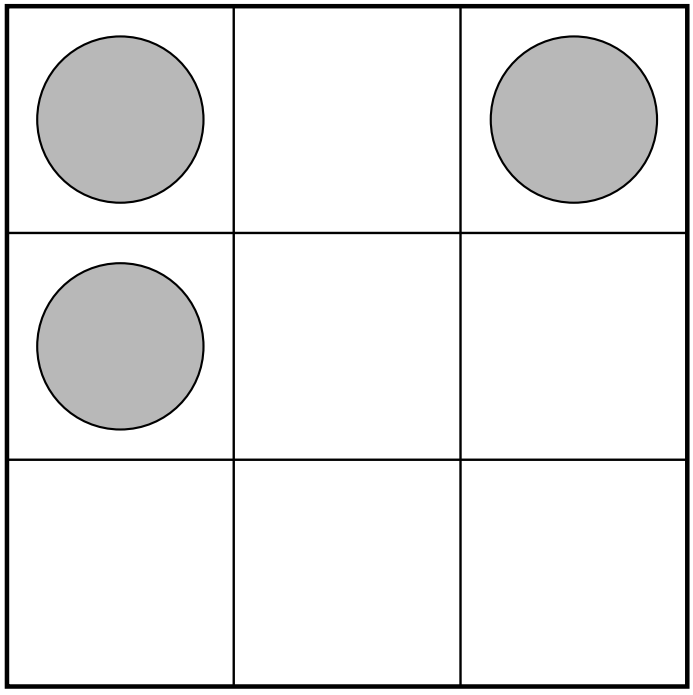

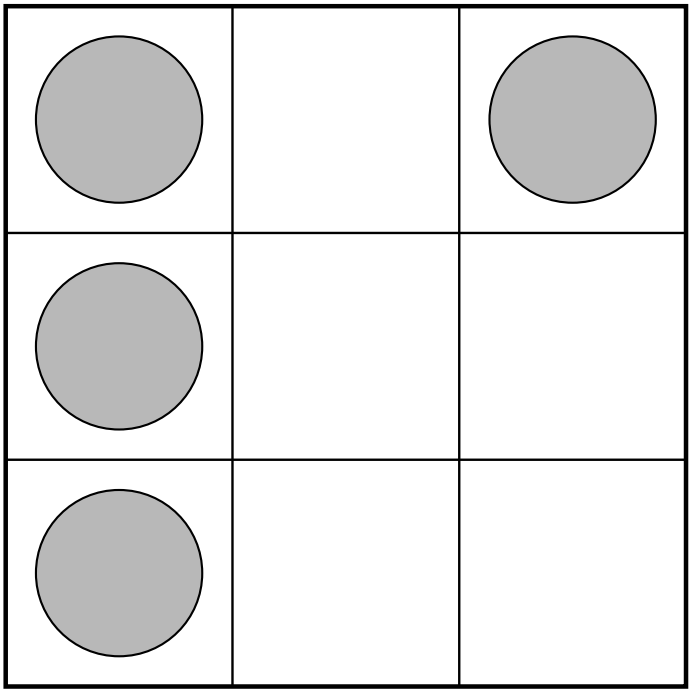

Problem 2: Which of these boards can still grow? Grow each one until it stops.

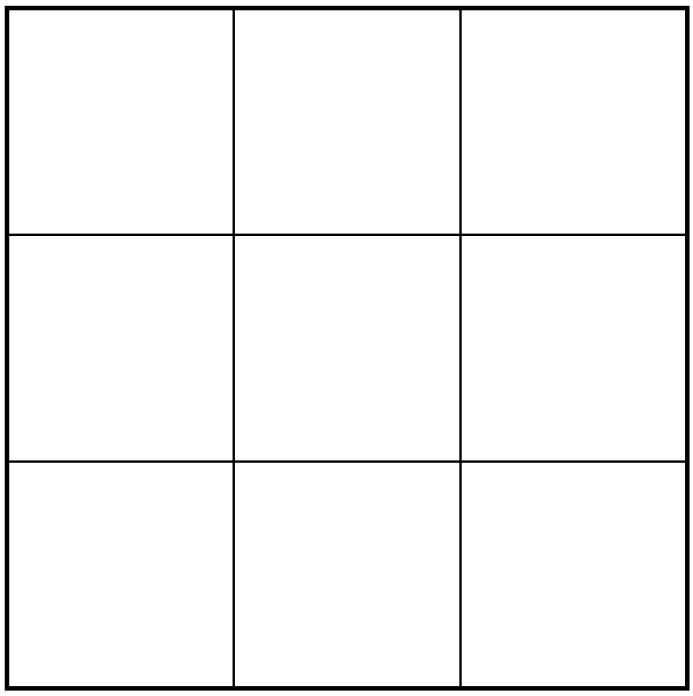

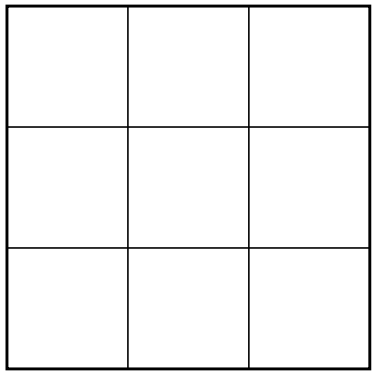

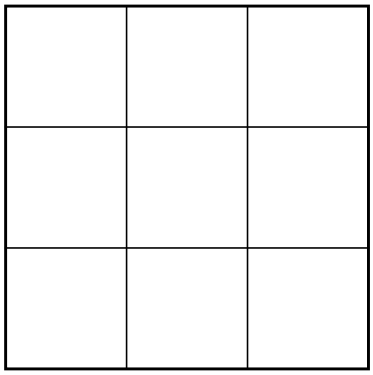

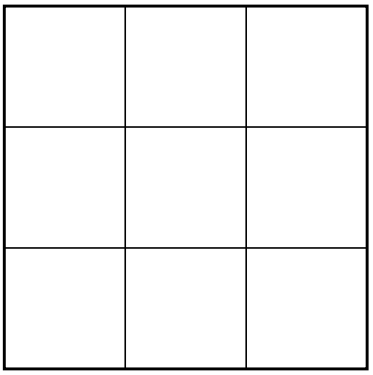

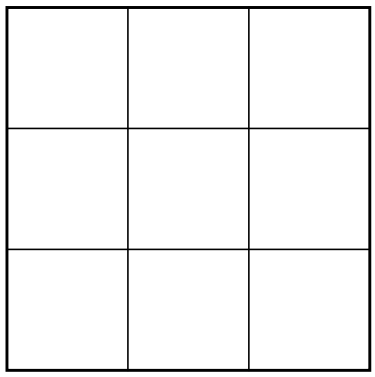

Problem 3: Fill this board with as few seeds as you can, and draw the seeds.

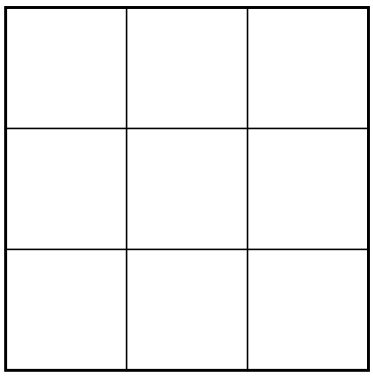

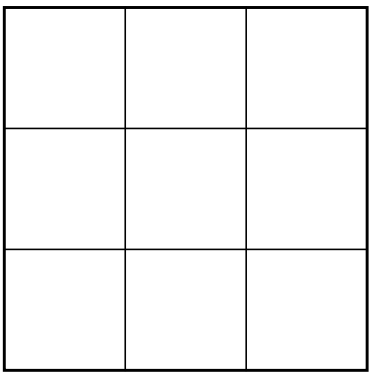

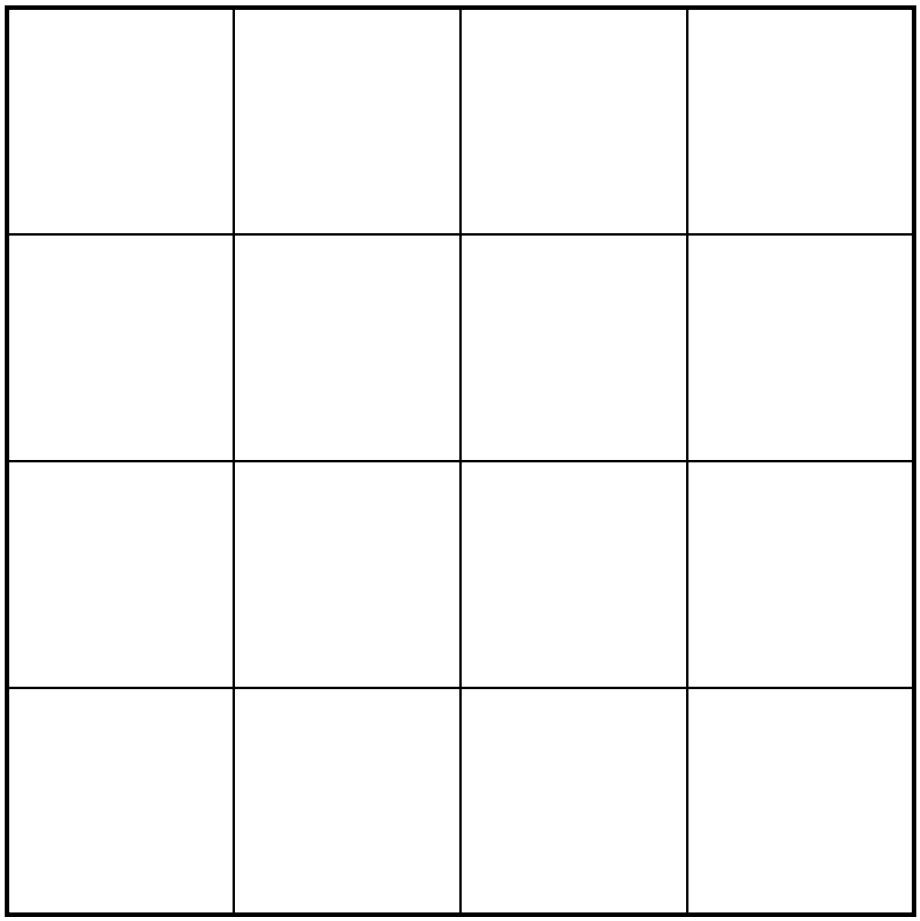

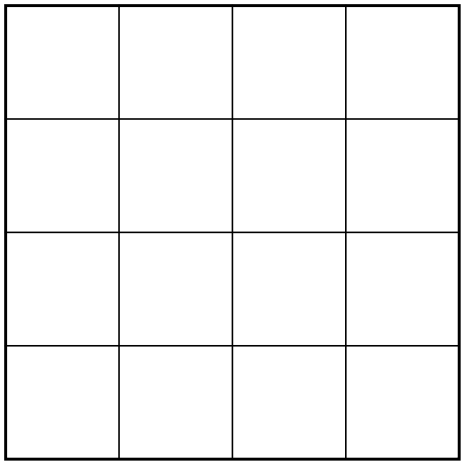

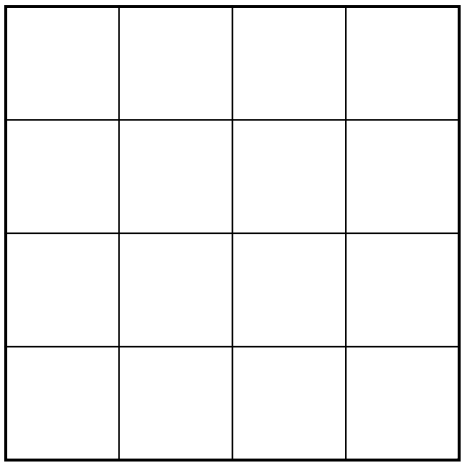

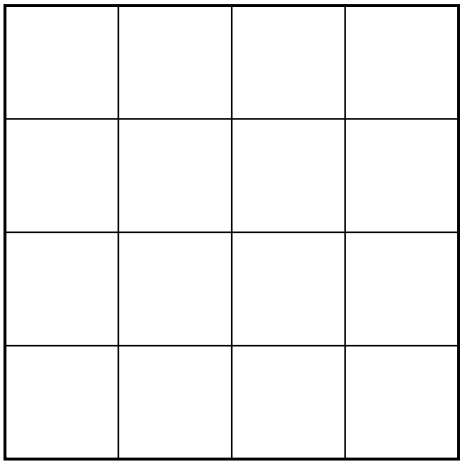

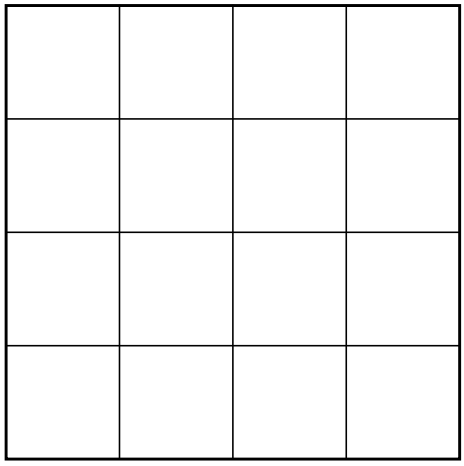

Problem 4: Guess how few seeds can fill this board. Then fill it with as few seeds as you can, and draw the seeds.

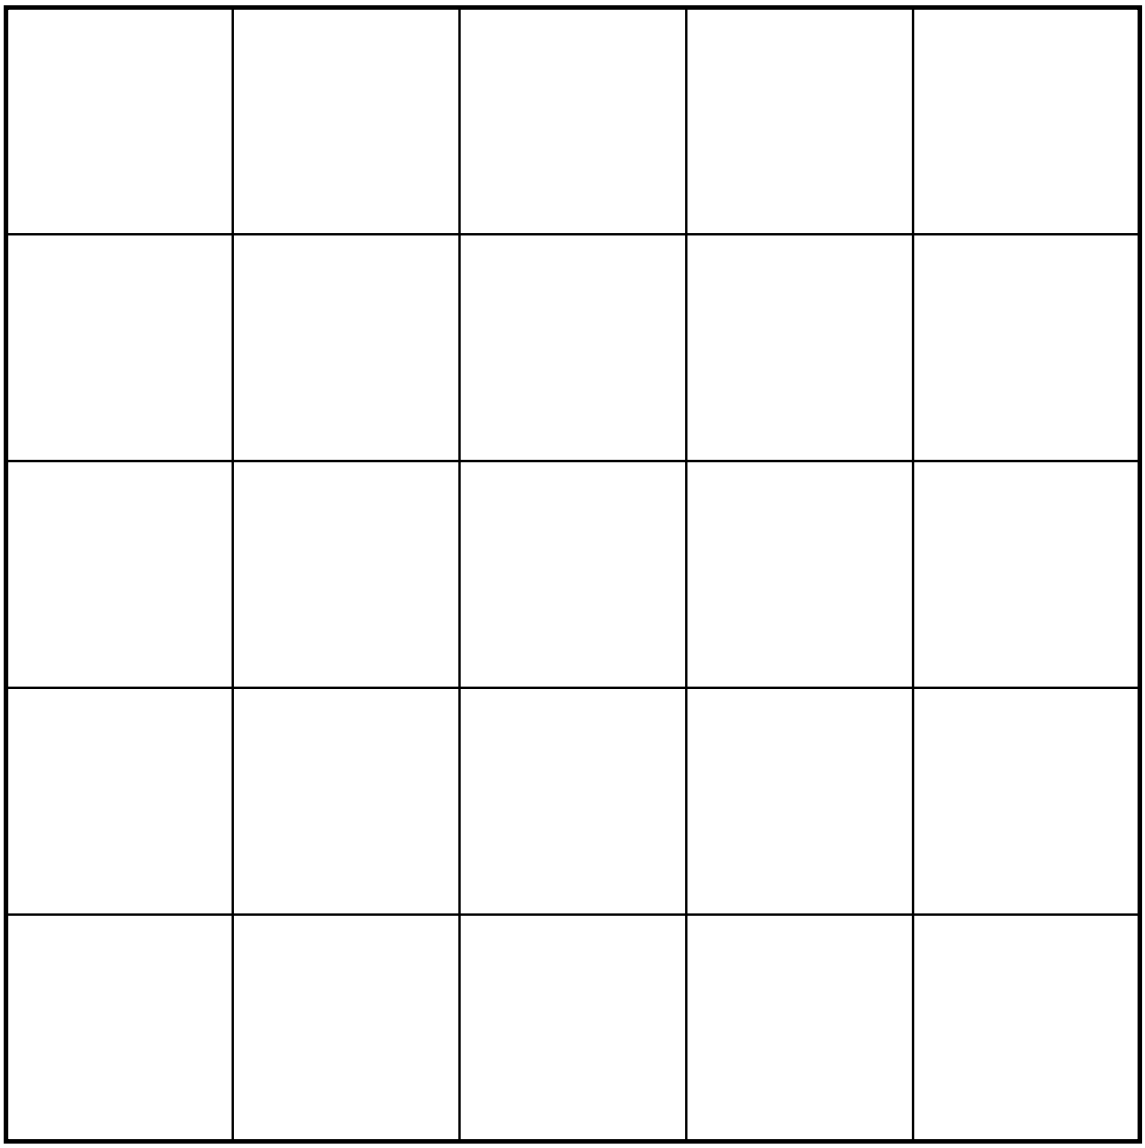

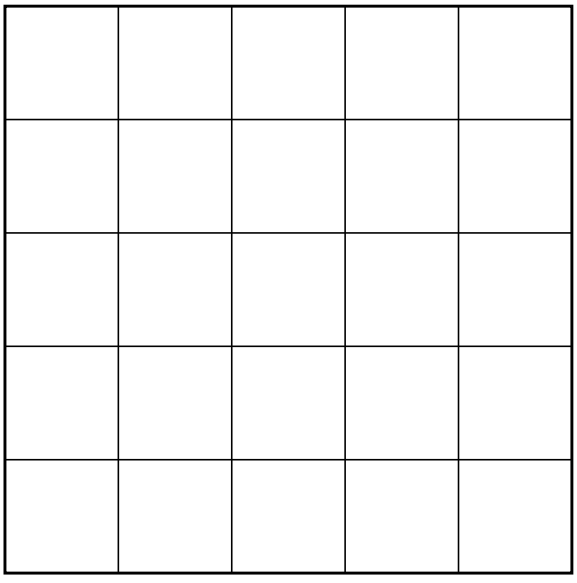

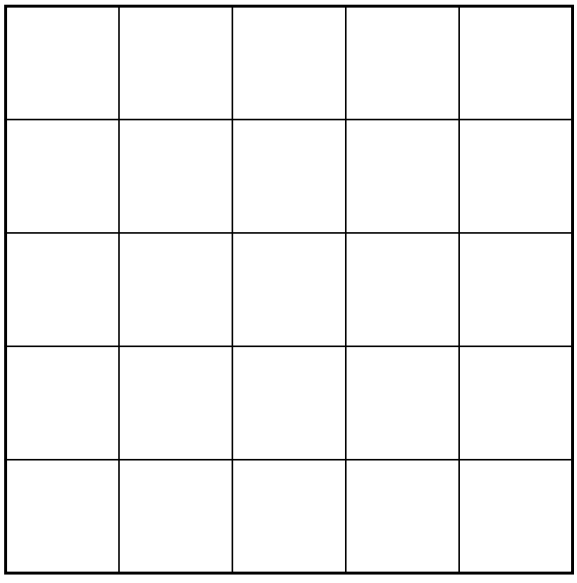

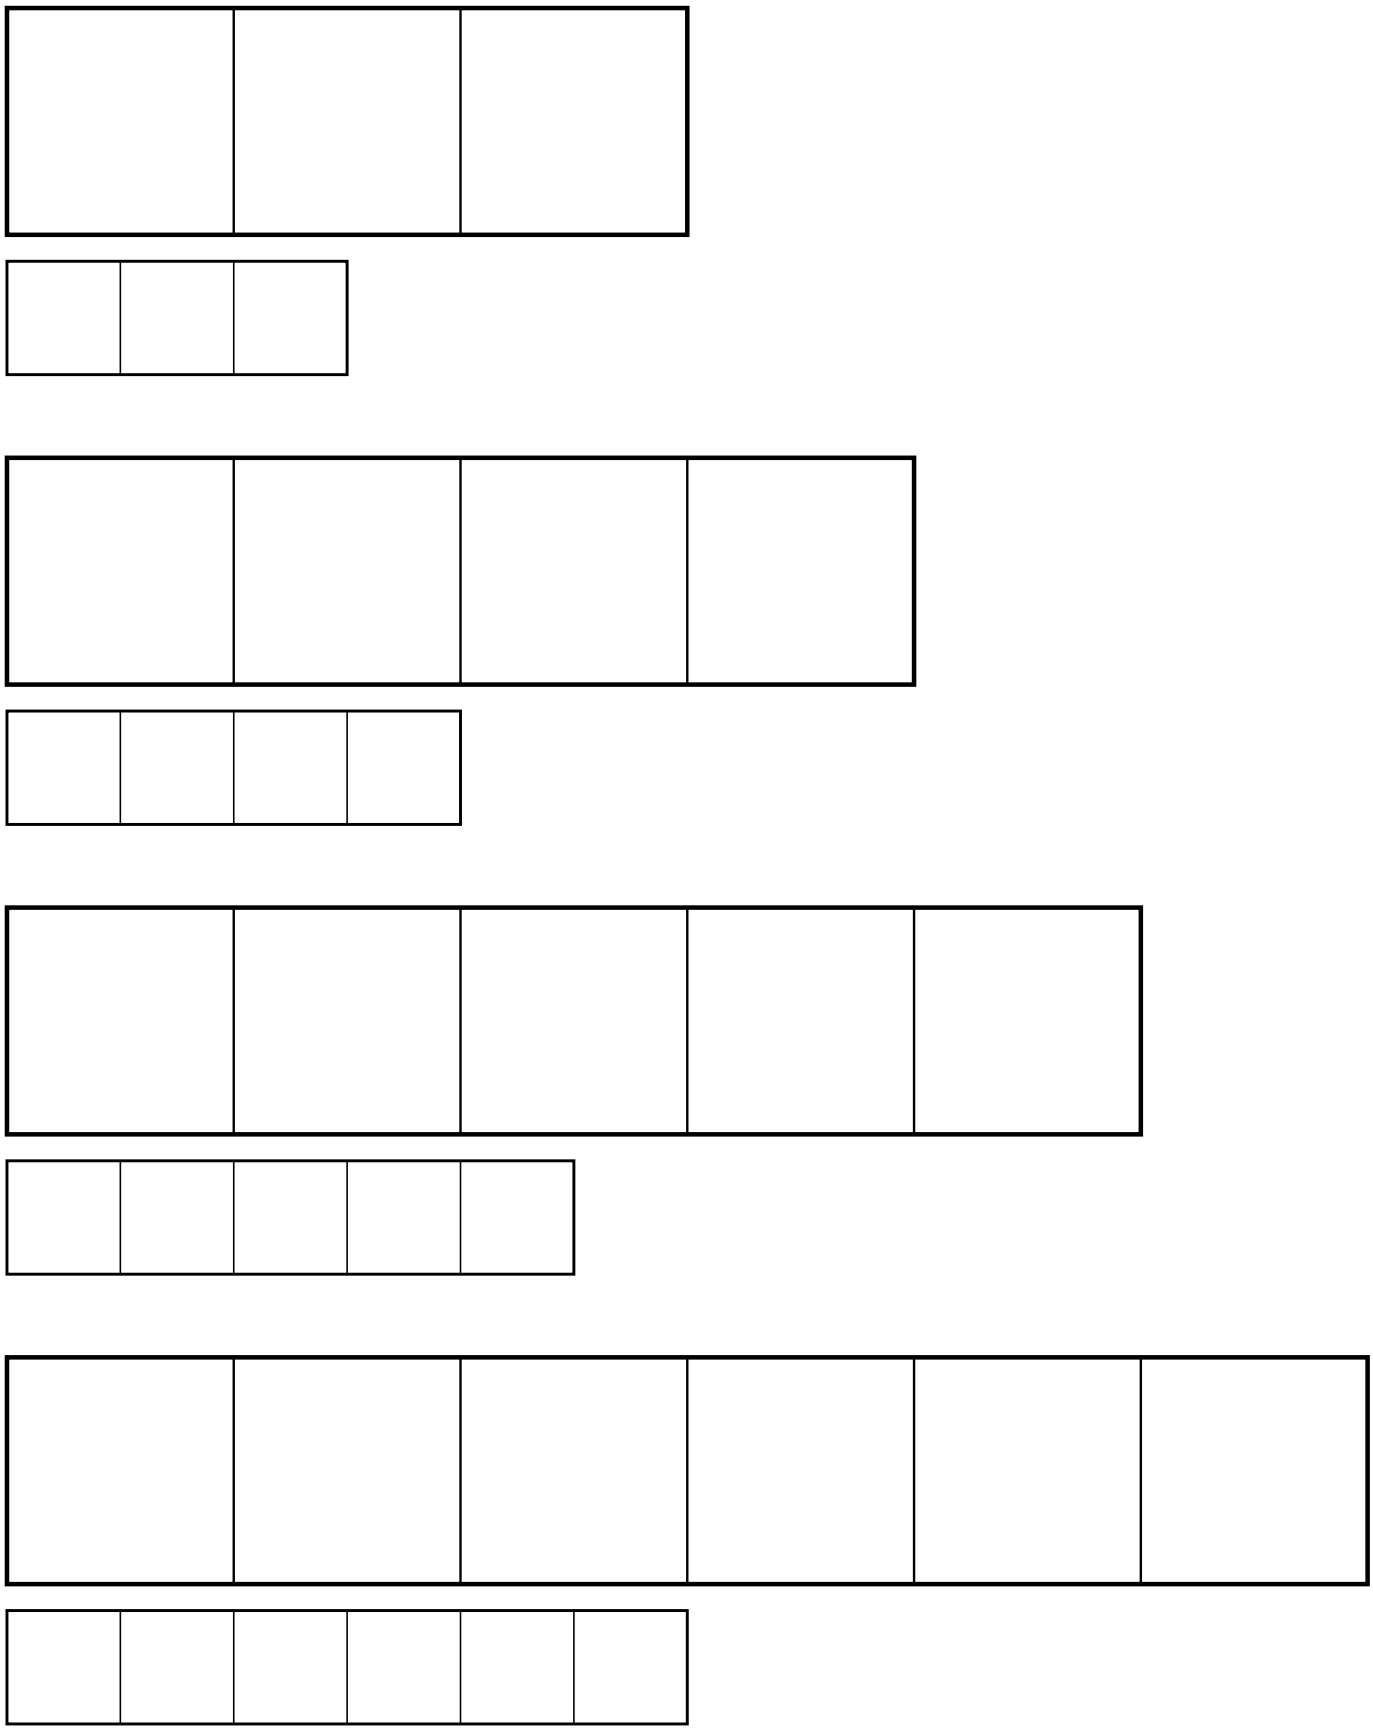

Problem 5: Guess how few seeds can fill this board. Then fill it with as few seeds as you can, and draw the seeds.

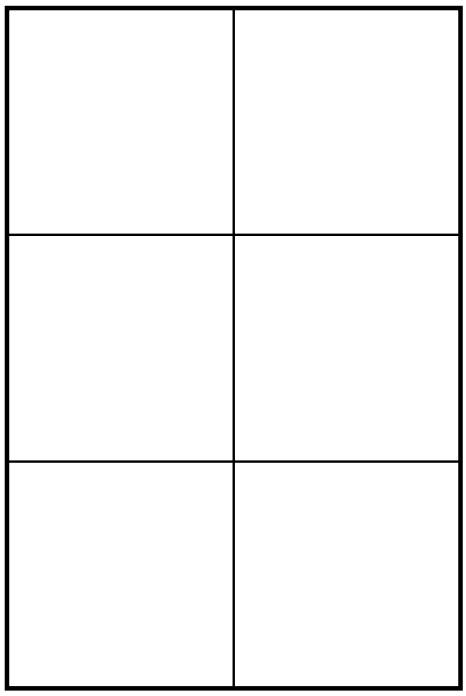

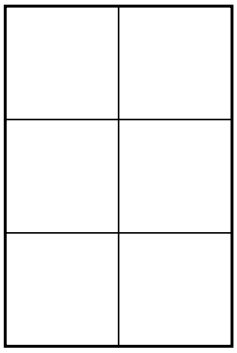

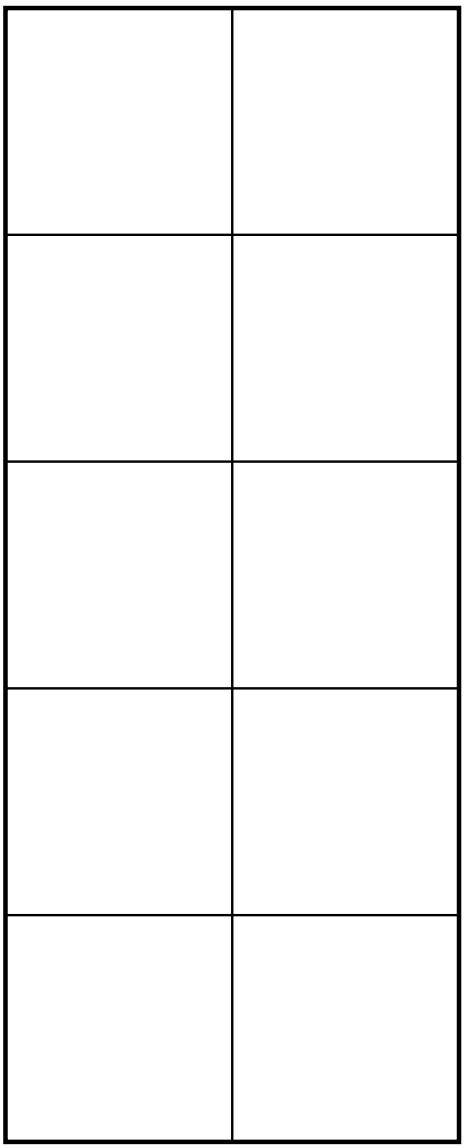

Problem 6: Fill each strip with as few seeds as you can, and draw the seeds.

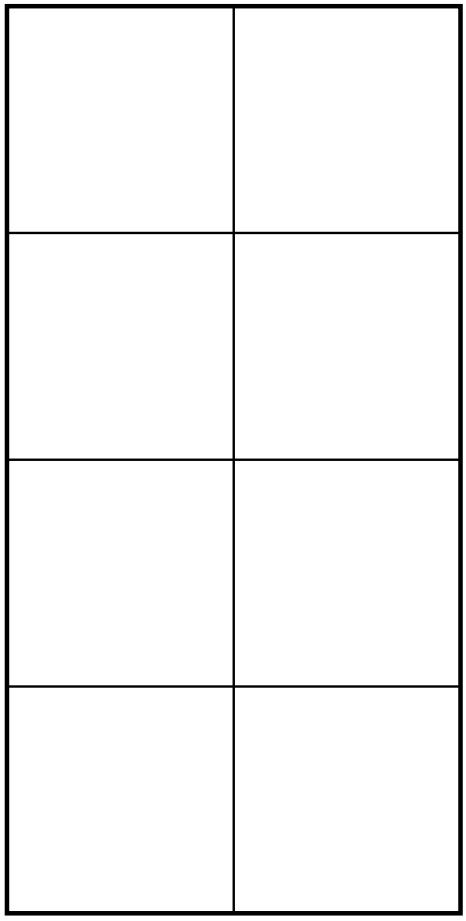

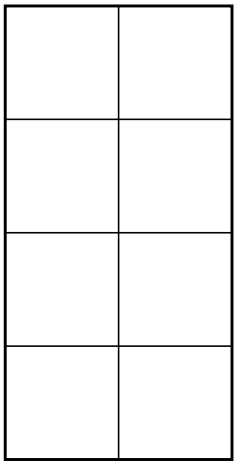

Problem 7: Fill each board with as few seeds as you can, and draw the seeds.

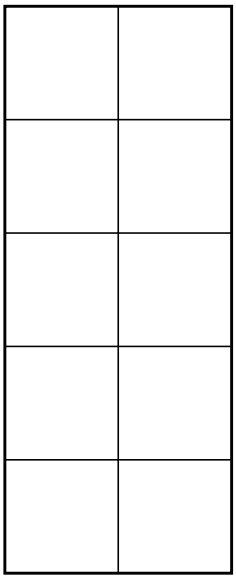

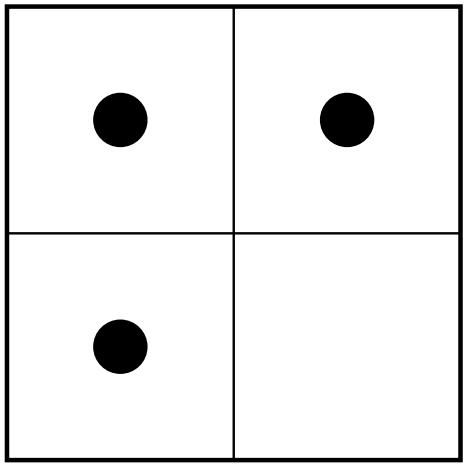

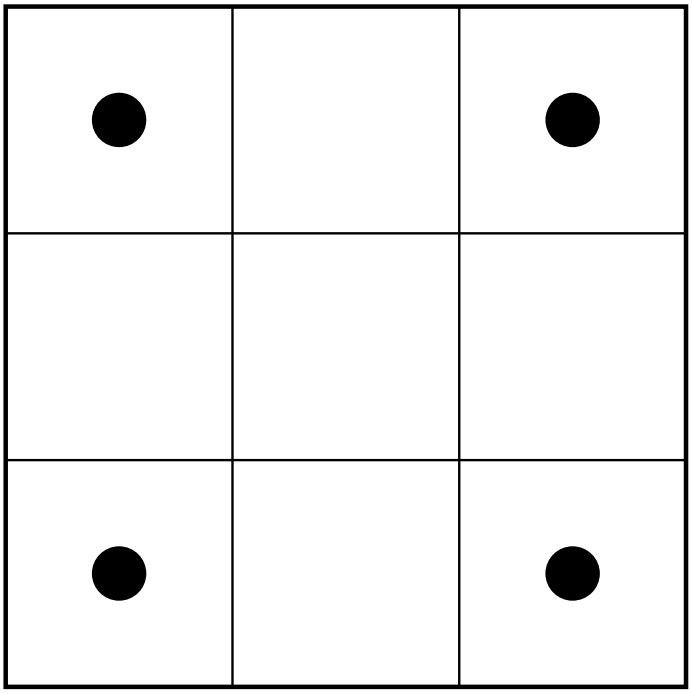

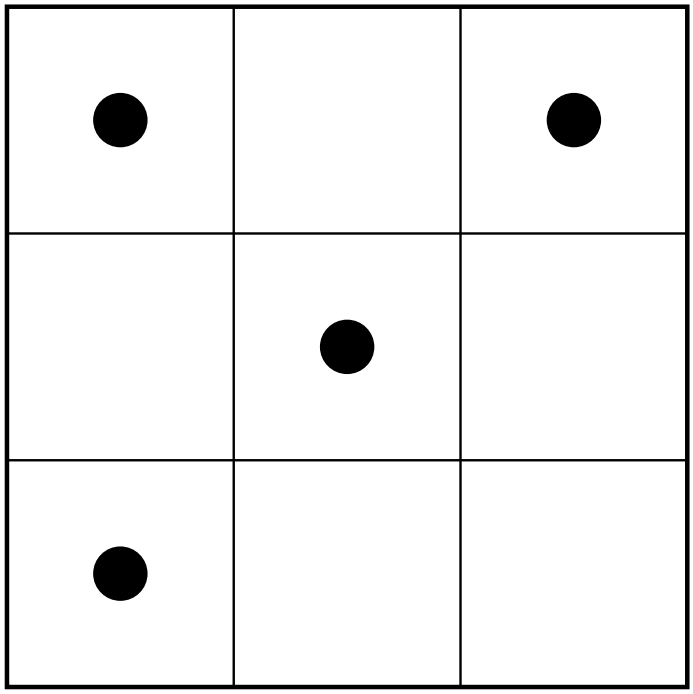

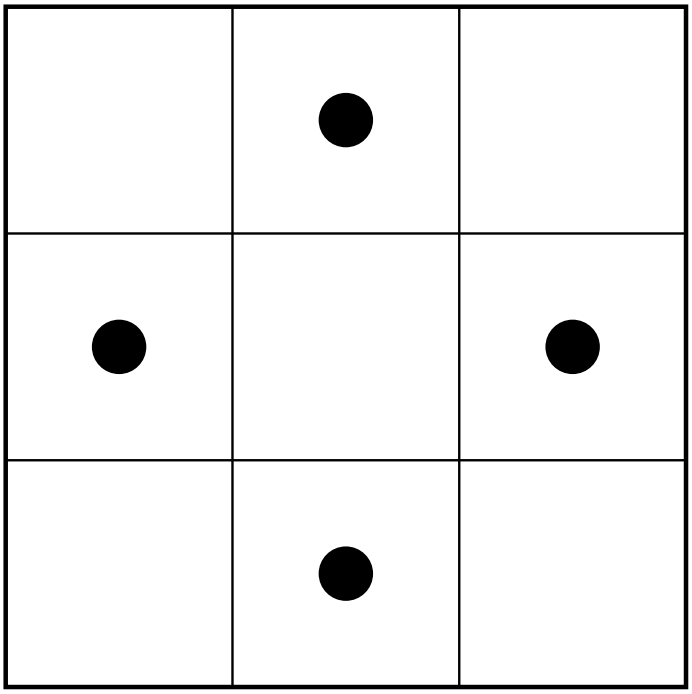

Problem 8: Put seeds on the dots of one board. Ring each seed that can come off by itself while the other seeds still fill the board. Put each seed back before you try the next one.

Problem 9: Put seeds on the dots. Take seeds off one at a time while the board still fills. Draw the seeds left when no more can go. Can you end with a different number of seeds?
