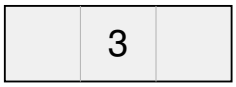
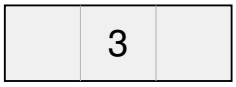
Problem 4: For each pair of rods, build a small collection that convinces someone that every target after a certain length can be made. Say where the gaps stop.





Problem 5: Use 4-rods and 7-rods. Find the last impossible length, and explain why there are no later gaps.

12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27
28							

Problem 6: Someone says every pair of rod lengths eventually has no more gaps. Test 2 and 4, then 4 and 7. Is the claim true?
