A route follows arrows from Start to Finish. Routes may meet at dots, but each arrow can belong to only one route. Use a different color or line pattern for each route. A marker closes one arrow.

Problem 1: Fit as many routes as you can on each board. Find another way to fit that many routes, if you can.

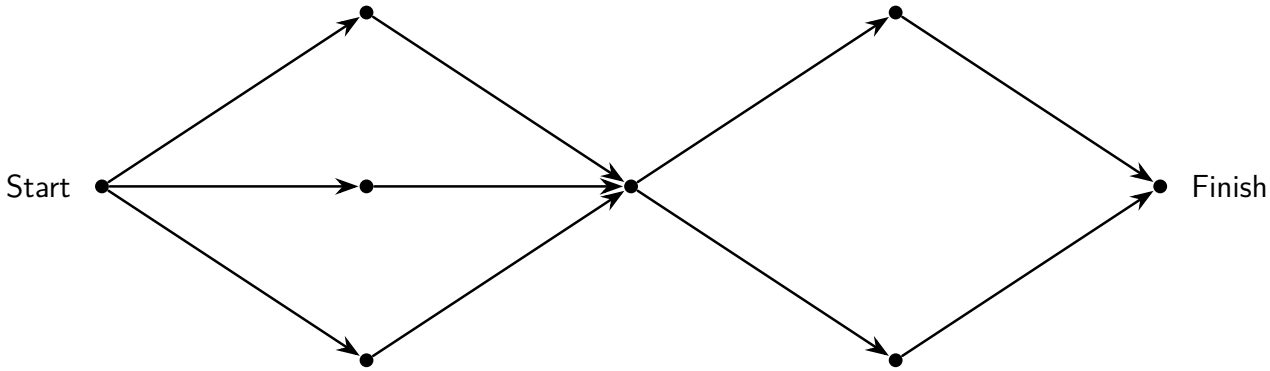

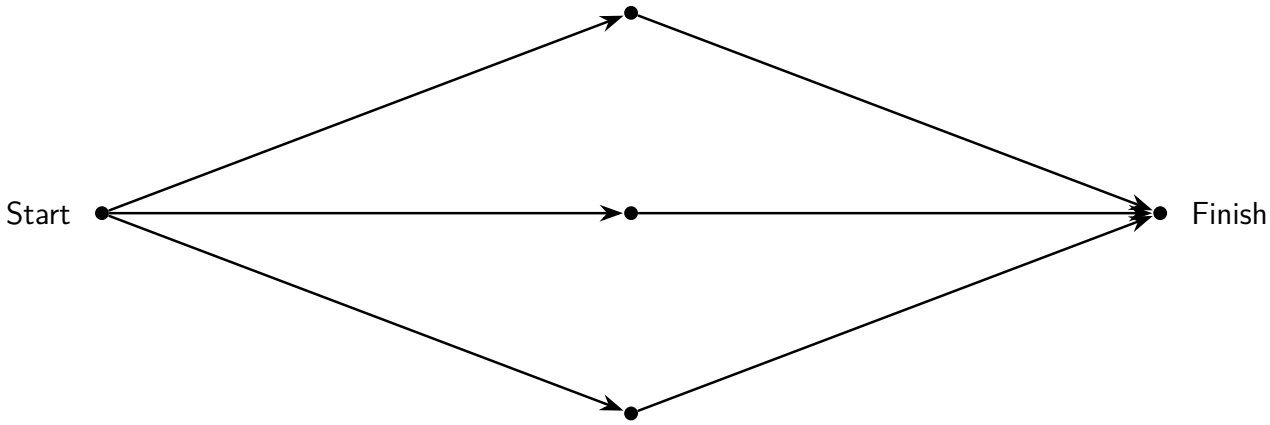

Problem 2: Stop every route with as few markers as you can. Find another way with the same number of markers, if you can.

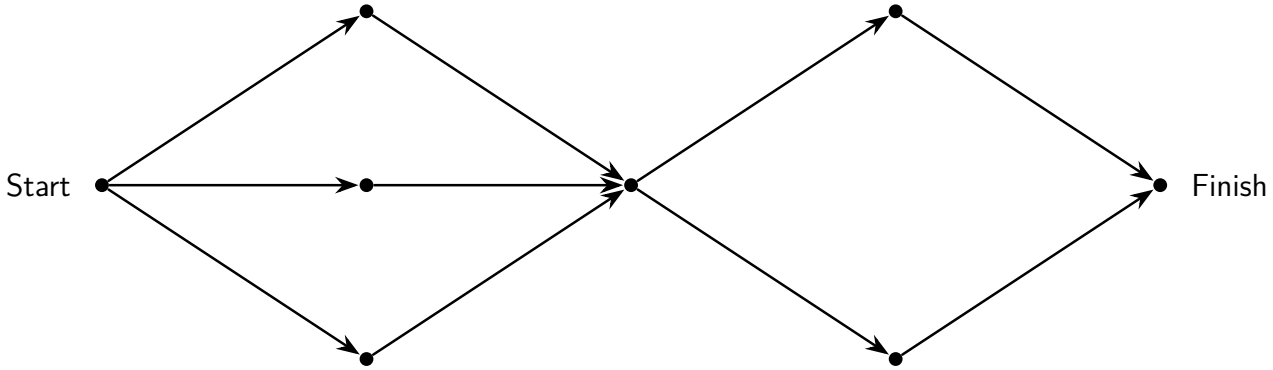

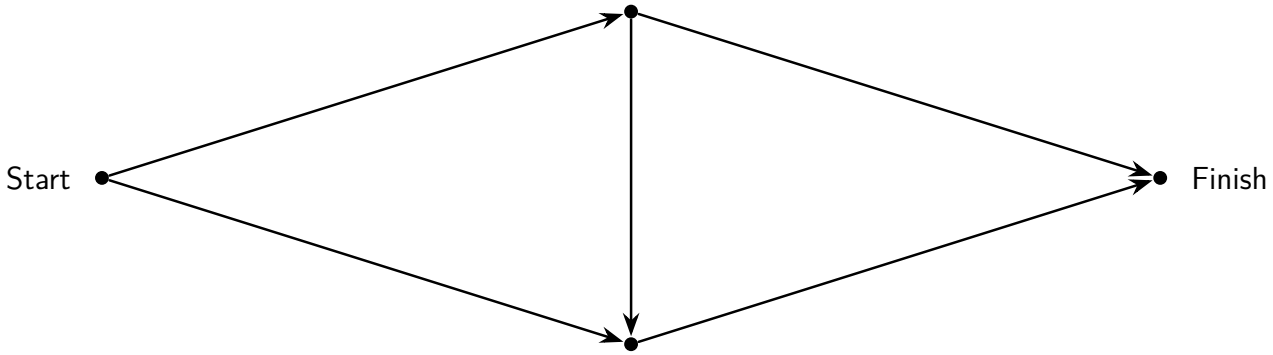

Problem 3: Fit the most routes on each board. Then stop all travel with as few markers as you can.

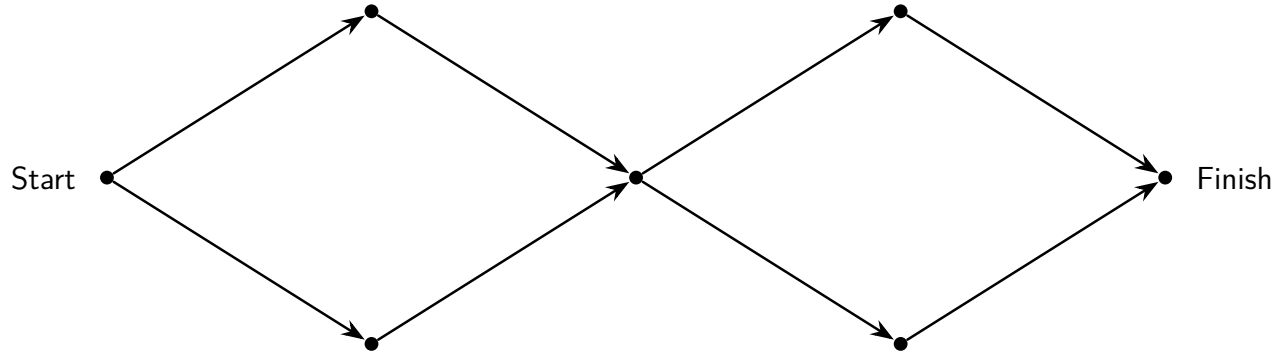

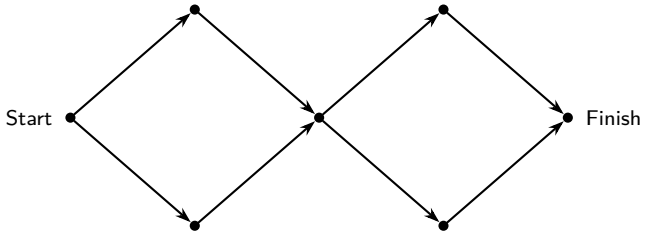

Problem 4: Close just one arrow at a time. Find every arrow you could close and still fit two routes.

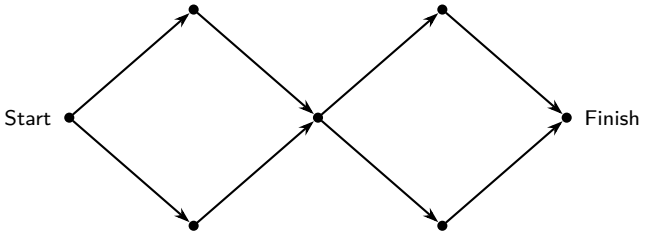

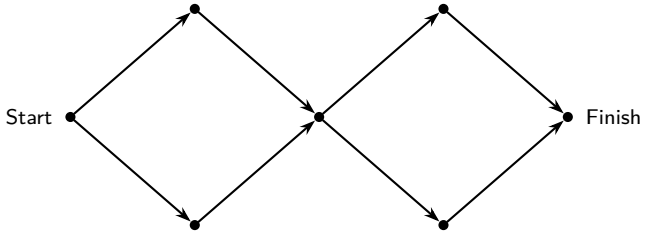

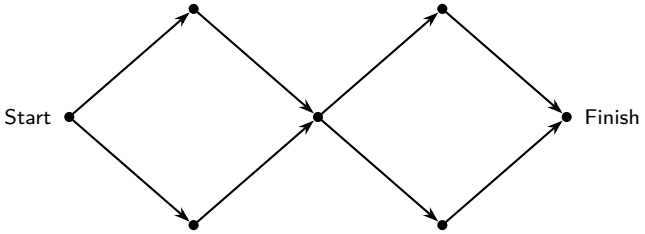

Problem 5: Stop every route with two markers. Find every different pair of arrows that works.

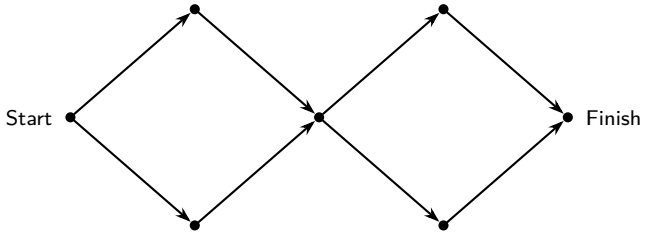

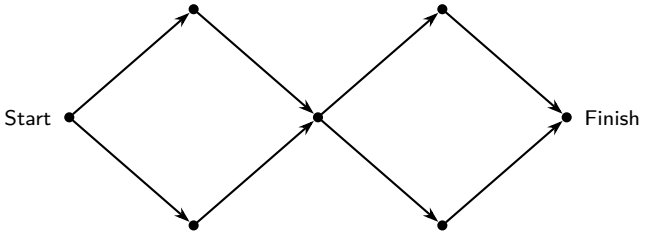

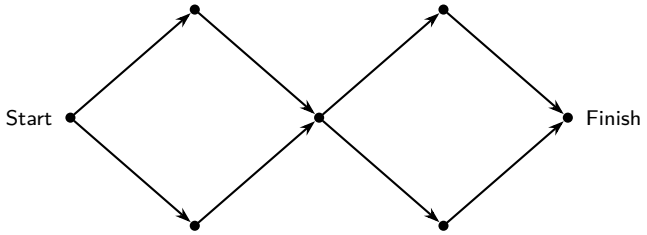

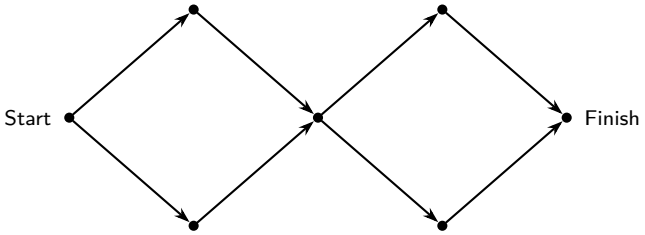

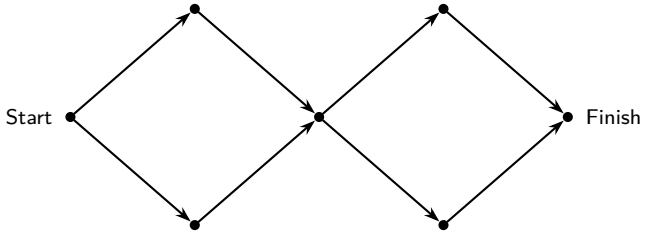

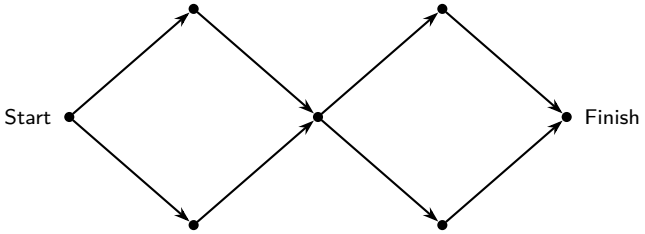

Problem 6: Two players take turns closing one open arrow; whoever leaves no route wins. On each board, would you rather go first or second, and how can you win?
