Put a counter on every bridge, and put your token on an island. The token moves by crossing bridges. Each time it crosses a bridge, pick up that bridge's counter. A bridge with no counter cannot be crossed.

Problem 1: Pick up every counter in each town. Color the island where you started.

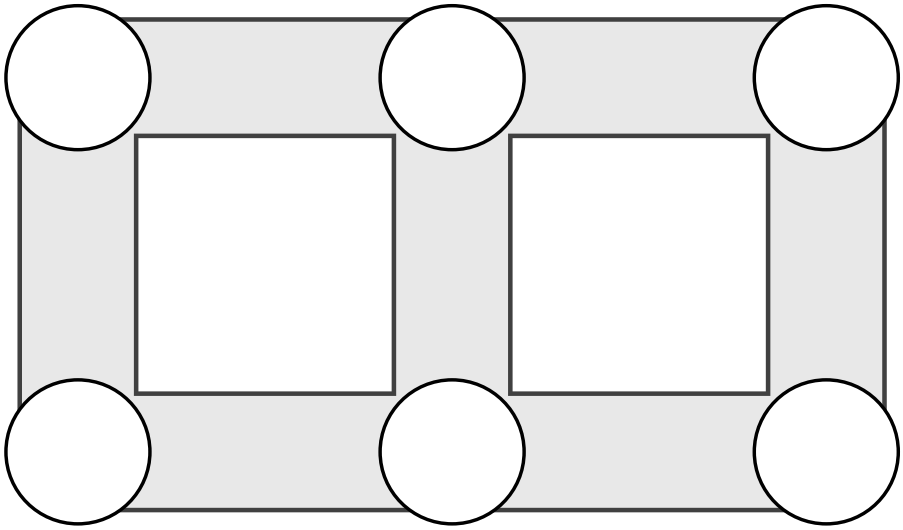

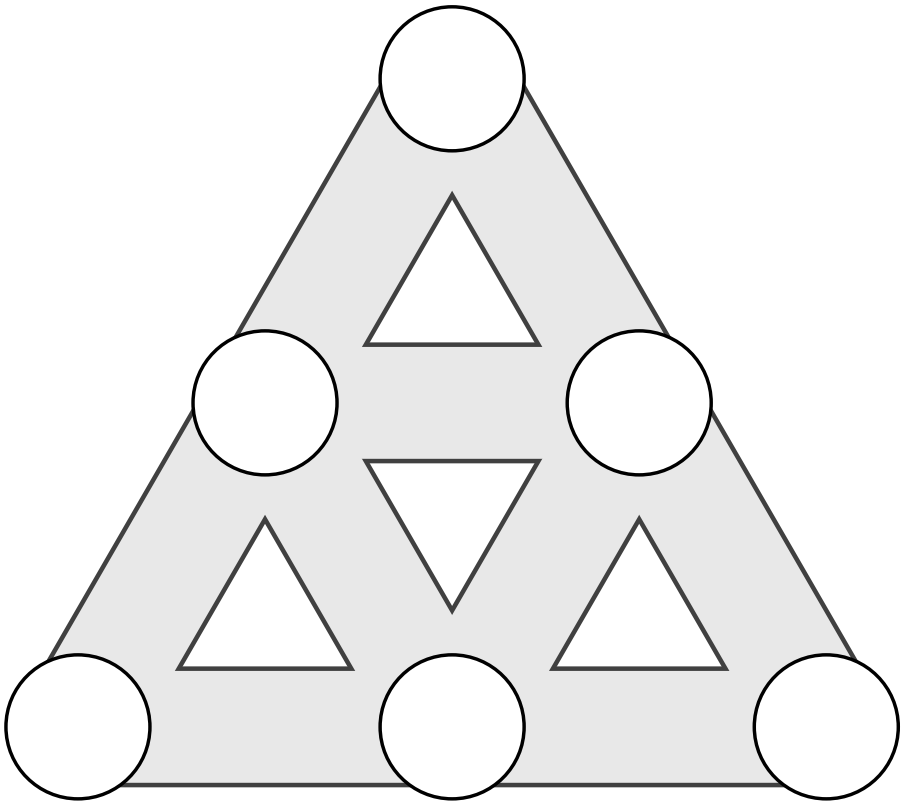

Problem 2: Color every island where your token can start and still pick up every counter.

Problem 3: Can you pick up every counter? Put a check in the box if you can and an X if you cannot.
